Can someone please email a list regarding pager frequencies in Atlanta, GA (or anyonewhere else, i figure they are similar). I know that 462.* has lots of pager activity, but any more help would be greatly appreciated.

thanks!!!

direct email appreciated...

Ken Bickel (ac4vv@megsinet.net) said ...
> You cannot use a scanner on an airplane, period.

Not so, Kemosabe. Although most airlines just ban the use without any thought, certain airlines will allow the use. On numerous flights on US Airways and United I have used my R10. This does not mean that any flight on these airlines you can use your scanner. All you have to do is approach the Captain or First Officer as they prepare to board the aircraft and ask them if you can use it. Some say yes, some say no. Some want to see it.... You get the idea. I'm running about 80% success rate. The kicker about this is that it's just not worth using your receiver in an airplane. They are an extremely noisy RF environment and I've not found much worth listening to. But that could be a function of the particular airplane. Bottom line to all of this is : Just ask, all they can say is "No". But when you ask, respect their decision.

Overall, the BC220XLT is a good scanner, but it has weak audio and a small speaker. It also is double conversion, meaning it gets images 21.6 MHz away. It has a good scan and search speed, as well as 200 channels and service search.

Not really, I have an old PRO-2022 that I "restored" a few years ago. I still have it even though I seldom use it. Hobbyists may be used to looking for diodes or resistors that hide cellular coverage, but, if the pins of the CPU were simply not connected to anything at all, would they be noticed?

check these sites out. while your there at the first one, look at the
mid-michigan frequencies ! Okay that file is mine ! ;)
Actually many of them can be applied to your area and nationwide !
Im in Bay City with my rooftop discone antenna. I can clearly hear
genessee county on .....

Leave me your "REAL" address and I'll send you A LOT of frequencies that you desire !

1791. Band scope conversion for old Scope?

Newsgroup: rec.radio.scanner

From: Greg May <greg_may@hp.com>
Message-ID: <350CB4A1.405@hp.com>
Source record: 166990

Does anyone have any leads on how I can use an old oscilloscope to view a small portion of the band being scanned -- I assume, tap off the IF but there must be some project out there that allows bandscope simulations (realtime).

Thanks for any leads.

Greg
greg_may@cv.hp.com

1792. FS: Uniden BC3000XLT 400 ch handheld scanner; LNIB $280

Newsgroup: rec.radio.scanner
Date: 1998-03-15 00:00:00 UTC
From: bodoh@dakota.net
Message-ID: <6egla2$1eis$1@server2.dakota.net>
Source record: 166991
Cross-posted to: rec.radio.swap,rec.radio.scanner

For sale: Uniden BC3000XLT handheld scanner (current Uniden top-end model);

Coverage 25 Mhz to 1.3 Ghz (minus cellular and 550-760)
400 channels in 20 banks
300 ch/sec search, 100 ch/sec scan
10 priority channels
automatic search and store
selectable (AM/FM/WFM) modes (receives TV and FM broadcast audio)
selectable attenuator
data skip (skips over data channels)
WX key
typical features such as lockout, battery saver, selectable search steps
built in nicad
triple conversion

This radio is in 'mint - like new' condition, with; box, manual, duck, AC adapter - even packing materials! Also included is the optional leather case. Note that for those hung up on cellular reception,it reportedly receives cellular images clearly from 1005 to 1030 Mhz. This radio is one of the best at rejecting overload and intermod. The 20 banks, search store feature, TV and FM broadcast reception and leather case make it ideal for travel. Reason for selling: Have two and need cash.

My price is $280, paid in advance by postal money order, I pay your choice of UPS or USPS shipping. No trades. Lower 48 USA only. Please Email with questions...

Tom, N0YGT

1793. Guide to the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-03-15 00:00:00 UTC

```
Archive-name: radio/personal-intro
Revision: 2.2 98/14/05 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul
Schleck, K3FU, pschlect@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
newsgroups is so that folks who aren't interested in, say, homebrewing,
don't have to wade through messages about homebrewing on the way to read
about Field Day. Posting appropriately is just good etiquette.
```

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserve.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

I have had the same problem with mine version-worked on it for 3 months never did get it to work. You will not get any help from the creater neither.

I dumped mine-maybe another will be out soon-personally I think it was a scam.

Wintone 2.0 was not a scam. I've had it for about 8 months, and it works great. I did have a problem getting it to work on a Compaq Presario. I contacted the creator and received several E-mails about my problem. After trying the different settings I was given, I got it to work. I turn it on in the AM and it chugs along all day...
Works great for me.

PS. I have a registered version.

Recently I moved to the Flint area of Michigan and being semi-new to scanning, I'm documenting the region's frequencies due to a lack of readily available info. But... if anyone knows of a list that could save me some time (other than the Police Call and Betty Bearcat guides) it would be greatly appreciated. I would be happy to share any freq's I do encounter or have encountered so far.

Thanks,

Wireline companies are the local telephone companies who provide
traditional wired telephone service. Non-wireline are cellular-only
companies like Cellular One.

>Number two, when it gives base and Mobile numbers. what is the
>difference between these two terms (base and mobile). Does this mean
>that I have numbers for both parties chatting? I realize that this

>as illegal as hell but I would like to know what these terms mean
>anyway. Would somebody please respond to this?

The "base" frequencies are repeater outputs where, on most systems,
you can hear both sides of the conversation. The "mobile" frequencies
are where the individual phones are transmitting, exactly 45 MHz lower
than the corresponding repeater output. The only need anyone would
have to monitor the inputs (assuming it were legal, of course) would
be to hear the mobile or portable phones in systems where they are
blocked out from the repeater retransmission.

>days).

Quite right. Over the past couple of weeks, we have had agents from the FBI and the DEA speak to Criminal Justice majors at SUNY Brockport, and they pretty much describe the process to get a court order for a wiretap in the same way. They have to do a lot of legwork ahead of time to justify the order. They have to spend weeks or months with just a "pen register" recording what numbers were calling what other numbers, then figure out a pattern and probable cause to target ONE of the phone numbers of interest. There have to be affidavits and other paperwork to file. The package goes to an agency attorney who reviews it for completeness and errors, then to Washington, DC for review at higher levels. In some cases, the Attorney General herself must review the petition BEFORE it gets anywhere near a Federal magistrate. Then the judge has to read a stack of papers that can be more than a foot deep before deciding whether to grant the petition for a court order approving a wiretap. For the duration of the order, the agents must report on their progress regularly to the judge who issued the order. If they're not getting what they originally said they were after, he can revoke the order at any time.

Plus,
>> I am new at this, and many of them say "trunked". Can anyone help
me
>> on both of these problems? tks

Just put in what you can. The scanner will "round" the frequency to
something it can handle. In normal wideband FM systems, it will
usually be "close enough" that you can still hear the traffic.

When the new "refarmed" narrowband services start showing up, you may
be out of luck with an older scanner.

(We'll have narrowband fire and EMS communications, along with digital
police radio, around Rochester, NY within the next two years.)

You cannot use a scanner on an airplane, period. If you do and they find out you will be in deep doo-doo. I believe they will tell you it is against the law as you are putting the aircraft in danger because the scanner can interfere with the aircraft communications equipment. If you fly listen to the steward - they'll tell you.

You can listen all you want in an airport providing the airport security doesn't challenge you. If they do they can probably cite some local ordinance that prevents the use of portable scanners and at the least confiscate yours. Best advice is listen at home.

>Just me

Here is my considered opinion, for what it is worth. When the pro-64 first came on the market, no effort was made to tout it`s "computer-pragrammability", probably because anything connected with hooking a scanner up to a computer scares the bejeezus out of politicians , and others who have a vested interest in providing a false sense of security to their customers/users. Remember, the only way you could get a 2035 to scan the cell phone band was to hook up a computer interface ? If you think that the FCC doesn`t cruise these scanner news groups for info on these scanners, guess again. THEY have been seeing post after post about the "computer programmability" of this particular scanner, so they decided to start breathing down the Shack`s neck about them. And it will happen again and again EVERY time they see a lot of posts about the "computer programmability" of ANY make or model of scanner. I am not telling you not to post here, this is just the way things are. The government, you must understand, is exceedingly paranoid about you hooking the scanner up to a computer, and is going to stamp out any effort made in that direction. How ? Well, every radio sold in the USA, either by the Shack or by anyone else, must first obtain type approval from the FCC. It is a simple matter to "kill off" any make or model, simply by rescinding the type approval on that particular make or model. The FCC is able to easily "strongarm" any radio dealer in this manner, by simply threatening to rescind type appproval on models he sells. That is why I had to laugh when people claimed there was no "official" FCC involvement in the recent service manual debacle with the Shack. There WASN`T any OFFICIAL involvement ! They just threatened the hell out of them ! Prove it ! You must remember that the FCC is only anserwable to the government, and the government is staffed by POLITICIANS, who have more to hide than ANYONE.....

Message-ID: <jb-ya023080001503981814590001@news.demon.co.uk>
Source record: 167018

I can get my pro-46 to search through 406 Mhz to 174 Mhz, which it isn't supposed to be able to do, by using a 'limit' search (406 as high, and 174 as low). But will I ever actually receive anything in this 'gap' (I haven't so far)?

Sometimes I have to go through the sequence a couple of times before it works. And I can do the same with the other gaps too, except 823.9375 to 851.

Also, what would I hear in 823.9375 to 851 in th UK if I did the hardware modification, that I can't already hear?

Thanks for any help

I have a military background. We answer a telephone by stating that the line is unsecured. I do not even discuss "confidential" information outside of a secured area (ie a public street would be a no-no). Most radio transmissions are encrypted or at least frequency hops. Civilians just do not guard their privacy. Hell, their do not even guard their personal security which is why so many are victims of crime. Privacy is an illusion that we must create. I think that most civilians are just lazy. It takes discipline to have security.

You gotta be kidding, right?

You like being told what you can and can't listen to??????
I thought that social experiment failed.

I don't listen to phone calls, etc...pretty juvenile stuff, but support the
right to do so, if confused enough about life.

I am interested in how this antenna with the vertical whip performs on the low band. Especially during periods of low band skip on the 26 to 27 Mhz CB frequencies also. I have heard both good and bad and would like actual user comments.

Frank

Here is a neat mod I found that can be done with the keyboard.
The Regency MX-5000/7000 does not have a Search Hold Feature unless you do the following. This will hold an active frequency on your display and is great for finding new frequencies when you are at work, and or leaving the radio unattended.
Search/Hold Feature
---
1) Turn the radio on
2) Hit Clk Set.
3) Enter zero's all the way across the display.
4) Turn the radio Off
5) Turn the radio back on and you will notice that in the Search or Scan mode, anything that is now received on the scanner will hold on the display and the radio will not continue its normal function.
6) To resume Search or Scan, just hit any numbered buttion such as; 1-0 on the keyboard. The radio will now resume in the normal fashion.

Put Radio Back to Normal
---
1) Turn radio ON
2) Hit Clk Set
3) Enter the correct time
4) Hit Enter
5) Your now back to Normal Operations/Functions

I have found many, many new frequencies this way and plus its fun to know that the radio can do something that isn't listed in the operators manual. Have fun. ->Dan

The BC220/230xlt is a good scanner, the biggest downfall of it is
that it is only dual conversion and is subjected to quite a bit of
cellular and pager images in the 800 Mhz bands. The scanner is fast,
had a decent amout of channels and some handy pre-programmed search
limits for police, fire, ems, air, marine, etc.
Right now I have seen the BC235xlt priced very close to the same
price range. The BC235xlt is a triple conversion scanner, has trunk
tracking capabilities and throws in a few more channels also. I have
seen some places that actually have the BC230xlt priced higher than
what the BC235xlt is priced.

> make your little stories up on occasion!

OK, Toilet Boy, try this list of "off topic" posts I've made recently:

1. When connecting 75 ohm coax to a 50 ohm circuit, you erroneously gave the SWR as 2:1, not once, but twice. I had to correct you with the proper formula.

2. Rebutted your lame derision of using WD-40 in electrical circuits. Showed a posted from famed engineer Roy Lewallen, W7EL, <w7el@teleport.com> with supporting evidence of the suitability of WD-40 in electrical circuits.

3. Several times provided information where components can be purchased, most notably Digi-Key.

4. Posted information about Vanguard Labs, their products, and contact information.

5. Posted excellent paper on the usage of TV antennas with scanners several
times.

As usual, you lie Toilet Boy.

> Richard Kendrick wrote:

John Mackey, aka Toilet Boy, is the resident village idiot and
troublemaker. He has been stalking Bill Cheek electronically for the
last
two years. Mackey has a vendetta against Cheek for kicking him off the
Fidonet scanner echo. He claims a measure of technical expertise, but
has been unable to provide proof of his education and is known to blow
up the communication systems he attempts to repair. He spends his time
forging posts, canceling other people's posts who catch him in his lies,
and generally being a jerk.

Hmmm, I had word that it actually filters to make 900mhz clearer, same with all other freqs, and prevents the annoying imaging from other mixing. But that's what I've been told, I have a triple conversion scanner and it gets my 900 mhz cordless fine, was wondering if maybe your cordless has the "voice scramble" feature or has a digital signal, in this case you only get garble or even nothing without proper circuits to descramble the signals.

Hope this helps, sorry if it sounds cheezy, I'm new to this scanner hobby also, but I am addicted to the air waves :)

Strange, I can see my neighbors property, and inside their house through
their window while sitting in my livingroom. Am I trespassing while sitting
in my easy chair in my own home?

Also, last time I checked, lightwaves acted like radio radio waves in that
they crossed my property, and through my house if windows are unshaded too.

Don't even **THINK** of it!!!!

(Unless you're very good about cleaning manganese hydroxide out of the
innards of your scanner).

RAM cells require special charging curves which involve per-cell voltage
monitoring that the special chargers are designed for.

Just for the hell of it, I e-mailed RS (Steves Workbench) and asked why the PRO-26 disappeared and then reappeared on the RS shelves.
We all know why, but I got a very intresting answer.....or was it !! (P&R Bull Shit)

Here is what they said
The Pro-26 scanner has not been recalled for modifications. We are not aware of any scanners that have been recalled.

The Hi-Lo limit search should be able to search from

Frequency Coverage and Default Modulation Modes

25.0000 - 28.9950 MHz.....AM (in 5.0 kHz steps)
29.0000 - 53.9950 MHz.....NFM (in 5.0 kHz steps)
59.7500 - 71.7500 MHz.....WFM (in 6.0 MHz steps)
72.0000 - 75.9950 MHz.....NFM (in 5.0 kHz steps)
81.7500 - 87.7500 MHz.....WFM (in 6.0 MHz steps)
88.1000 - 107.9000 MHz.....WFM (in 200.0 kHz steps)
108.0000 - 136.9875 MHz.....AM (in 12.5 kHz steps)
137.0000 - 173.9950 MHz.....NFM (in 5.0 kHz steps)
179.7500 - 215.7500 MHz.....WFM (in 6.0 MHz steps)

>but that didn't work. Any suggestions?

Ferrite cores need to be at the source of the noise (your computer), not the receiver. What you are tryimg to do is cut down the length of the transmitting antenna. It's realy hard to believe your problem, but try small snap-on cores to the disk power cable. Also one directly at the rear of the keybaoard, one on the video cable, and one on both ends of your printer cable. Make sure all your grounds are good.

Good luck,
H Higgins

Hello, I currently own a used Uniden Bearcat BC700A, whose
date of manufacture was OGID or July 1994? The problem I am having is
that it will not scan certain frequencies, mainly the following,
30-120Mhz, 512-800Mhz, and 820-850Mhz. I was wondering if anyone knows
of a modification that I can preform to solve this problem and enable
these frequencies, or might be selling a scanner that goes from
20-950mhz (or something in that area) for relativley cheap? Please
contact me with any information at vchernyy@erols.com. Thank you in
advance.

With WEFAX coming from a satalite I believe we should all be able to
pick up the transmission on the same freq.

The current operational NOAA polar orbiting satellites:

NOAA-12 = 137.5 MHz
NOAA-14 = 137.62 MHz

the above was taken from: http://www.syswest.com/satnews.html

http://www.amsat.org/amsat/ftpsoft.html
Has a large selection of software for tracking satalites, and decoding
the WEFAX data.

No. You must charge those batteries individually with one of the
dedicated chargers that Ray-O-Vac sells. They work very well in
scanners and other radios that don't need high current drain
capacities. Also, they last much longer if you top them up
frequently, and don't let them run completely down before you charge
them.

I've been using Renewals for a couple of years, and I like them fine.

Eric,
One other thing I forgot to mention in my reply to you....

Do you really think cops have nothing better to do than sit and listen to a scanner set to cell frequencies and hope they hear something valuable and then try to figure out who said it...and what to do about it?

Nope...if they do get a court order, they go to the cell phone provider and set up to record conversations to/from the cell phone of interest only. And only for a few days (the life of the court order...typically 3 days).

Don

You are incorrect. When a corded telephone is employed in communication with another, the hardline used to establish and maintain the connection between you and the second party is yours by ownership. It is a closed circuit on which a hardware wire tap would be required to eavesdrop, and such a device of course would constitute an invasion of privacy. In the case of cordless or cellular telephones, private circuits are not used to establish and hold the connections. The public airwaves are utilized and it becomes the sole responsibility of the user to guarantee his own privacy. The airwaves are a public trust upon which licenses for usage but not ownership are provided by the FCC. Bearing this in mind, radio frequencies and the communications propagated by them are not and cannot be private. They become public domain and interception is lawful.

Your nonsensical analogy simply doesn't fly. Peering through someone's window involves you invading someone's personal domain in a physical

sense. That is illegal without permission from the owner of the domain. Listening to a cellular or cordless telephone conversation on the other hand involves the interception of signals which pass through your own domain. They are in effect given to you, as no effort is made to prevent them from entering the space which belongs to you. Additionally considering the fact that the medium of transmission is one of public ownership, you cannot require that receivers or their owners be prohibited from intercepting them. Metaphorically this would be no different than demanding that pedestrians walking down the street not hear what you and a friend discuss as you stand on the sidewalk. If you require privacy, either speak in tongues or find a vacant alley.

Encryption is the answer to the cellular and cordless phone privacy issue. By use of scrambling, the public's right to intercept the signal themselves will not be violated. The parties involved in the communication are satisfied because their transmissions are rendered unintelligible to potential listeners. The only reason that scanner manufacturers are presently forced to block these frequencies is because a wealthy and influential cellular industry has seen fit to push such regulations into congress. Less money is spent nudging a bill into law than through upgrading millions of cellular telephones, towers and equipment installations.

> make attempts to illegally intercept things that wasn't meant for your
> ears. It's called an "invasion of privacy".

As made clear above, this excuse simply isn't logical. While I may not intend that the public to know there is $500,000 dollars in a suitcase buried in my back yard, I cannot argue that my privacy on that issue has been violated when I state the fact in a public newsgroup. The government cannot post top secret documents on every corkboard in public libraries across America and then demand that inquisitive citizens not look at them. As such, you cannot propagate your private conversations through a public medium and insist that members of the public not listen to them.

> > doesn't get the Democratic scum of the hook, however, since they

> > along.
>
> Yeah...maybe we can hook a wire to your phone lines....as "long as I
> don't repeat it"?

If you physically attached a hardware wire tap to his telephone line, which is his property, then you would be committing a crime. What does this have to do with your castigating cellular/cordless interception?

I find it laughable that simple common sense is apparently above your level of coherence. This isn't a moral issue, my friend. The matter

at hand deals with personal communications being conducted in a way that renders them public -- by BROADCASTING them. You are correct in that the communications are private. But exposure of private things makes them public, and you cannot change that.

Radio shack is blowing the 64's out because they never sold. Take a good look at the radio-it dosen't have the features a $300.00 would normally have, ie "hold" mode during a search. RS gets around this by giving you 40 monitor memories, but somewhat goofy to use during a search. I used to work for the Shack, and we were never able to sell one-I think in part mainly because our customers tended to be older citizens who were still using crystal scanners, and second because the styling wasn't traditional. A good radio, find mine is plent sensitive for the monitoring I do.

Clinton is to visit Mandela and friends here in S.Africa in the near future. A Galaxy (I think!) arrived a few days ago with the communications equipment.

Where do we start looking for the frequenies both in the air and on the ground?
Will Air Force 1 use normal Atlantic routings and frequencies? Will it fly direct from the States or via Europe or Central or Southern America?

Thanks for any help and pointers.

In the air you will need freqhawks and on the ground you will need hertzhounds. You begin looking in the area of anticipated density saturation.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. I purchase most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz. |

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is: |

International Crystal Mfg Co. |
11 N. Lee Ave |
Oklahoma City, OK 73102 |
tel. 405-236-3741, 800-725-1426 |

You need not bother with calculating the crystal | fundamental frequency. Merely supply International with | the exact receiver model number, printed on the rear label, | and the frequency you want to monitor. They will perform | the necessary calculations. |

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp | sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the

transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation.

This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages

long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee | for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1997 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker |
Mar 1997 - RELM MS-200 mobile
Apr 1997 - RCA RP-6150 portable |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong,

causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring

Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by

reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature

identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at | http://www.grove.net/~grove for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual

band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA |

RP-6150: 1997 vintage. No frills, good performing portable. | 200 channels in 10 banks. No military aircraft frequency | coverage. Triple conversion and a flexible battery | arrangement. Lacks duplicate channel detection, search | skip, and empty channel lockout features of newer designs. | Our sample isn't super sensitive at 470 - 512 MHz and has | some intermod around the VHF railroad channels but is | generally more resistant to image problems than the | BC230XLT. For technical test results and a review, see "The | RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring | Times, April 1998. |

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 | Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with | alpha labels. CTCSS and DCS decoding squelch. Programmable | via PC using supplied software. Low contrast, LCD display. | Keypad backlit for night programming. Rear panel tape audio | jack. Test unit had lots of intermod on VHF-high band. IFs | are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob | Parnass, AJ9S, in Monitoring Times, March 1998, for a review | which includes quantitative test results. |

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner

with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes

on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked

systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an

optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Model	#chan-nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough

condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each,
but you must know the patent number. Credit card orders are
taken over the telephone by the Assistant Commissioner for
Patents at (703)305-4350. Alternatively, you can mail a
check or money order, made payable to "The Assistant
Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark
Office, call their automated information message system
toll-free at (800)786-9199.

There are various patent servers on the world wide web,
including IBM's server:

true tale written by a time magazine writer about the death of her favorite mailing list because of loudmouths... insert rec.radio.scanner for mailing list and mackey, cheeks or other favorite loudmouth for the guy mentioned in the story.

March 12, 1998 Death of a Mailing List by Liz Charnock

For several years I subscribed to the Brave Combo mailing list. It's populated by a cross-section of humanity so diverse that if you saw it in a petri dish, you'd run screaming from the lab. Brave Combo is a polka band, and our list was the smartest, funniest, kindest, weirdest list in the world. I'd claim biggest, too, but I'm not as big a liar as most Texans. If I could use only one word to describe our list, I'd say friendly. Sure, there were occasional differences of opinion, but tolerance and genuine kindness resolved most differences. Then one day a stranger came to town. Spring of '97, a new poster -- we'll call him Frank -- joined the list. He was a little more prolific than is usual for newbies, but he seemed to really dig the band and the music, and he was eager to interact with the regulars. How did that go over? If you subscribe to a mailing list, you know that regulars prefer that newbies take it easy in their initial postings. The new kid at school is supposed to be humble, not run for class president. Maybe that's why when Frank made a minor political comment, it called forth a fairly sharp rebuke from an old-timer. The list split into two camps. Camp #1 thought that Frank should be allowed to say whatever he wanted on the list, it wasn't a big deal, etc. Camp #2 said that the list was only for topics pertaining to Brave Combo, that political and religious discussions didn't belong there. A normal newbie would probably have laid low for a while, everyone would have chilled, and life would have gone on as usual. Did I say normal newbie? Frank demanded that his accusers give him exact, cut-and-pasted quotations of his alleged inappropriate remarks, then followed them up with more of the same. You've subscribed to lists. You know what happened next. Invective, uppercase shouting, lots and lots of postings and bilious disagreements. Frank decided there were deep political messages woven into the fabric of many of Brave Combo's songs, esp. the Mystery Spot Polka. Several people tried to explain what Mystery Spots were, but to no avail. Voices of reason were raised and then promptly shouted down. Ever seen one of those old "Twilight Zone" episodes where the whole town (except for one sane person whom they stone to death) goes vigilante, and neighbors pour into the street ready to accuse everybody else? Worst of all, as soon as you said/posted something nasty you'd clap your imaginary hand over your mouth and think, "I can't believe I said that." What happened to the happy lads and lasses who liked to form a giant circle and do the Chicken Dance? It's easy, a year later, to see who was really to blame: AOL. Before you dismiss this, go back, back, back in time to the spring of 1997. Kazillions of aggravated users who couldn't log on. So much mail pouring in that it backed up the servers. Frank thought his

messages were being censored because they didn't appear immediately. Things were bad, and they got way worse. Pressure came, pressure won. Censorship started. As fast as our listmaster blocked one address, Frank would create another. Finally a combination of filters and fatigue silenced him. Silence fell blessedly over the list, but somehow nothing was quite as it had been before. The spontaneity was gone. People didn't post the first weird thing that sprang to mind anymore. The goofy nicknames no longer seemed funny; now they were silly affectations. We were faster to criticize others. Took umbrage at perceived slights. People left. Almost a year went by. I think Frank put a reminder on his calendar: "March, 1998: Pester the hell out of the Brave Combo List". Pretty much everybody who had ever posted a message to the list was in Frank's address book, and he started writing to us on the same tired old topics as before. This time, since the mail wasn't going to the list, our brave listmaster couldn't save us, and for every piece of mail we got, he got 20. Frank REALLY resented being prevented from posting. This time we knew better than to post messages saying "Leave us the hell alone, Frank!" That just encouraged him. How did I cope? Delete, delete, delete. Date: Sun, 01 Mar 1998 20:48:34 -0500From: David C Subject: pulling the plugbravecombo and bravecombo-digest are going down, at least for a while. all of you who want to communicate with each other or with me feel free to mail me with any ideas or observations. Franklin K has created such a weird and hostile ruckus that it's no longer worth the trouble it takes to fight him. If we get hassled in meatspace we can get help, even call the cops. But there is no defense or redress on the Net, at least none that we've found. Who's the cyber sheriff? Do we need one? Yeah, I think we do. Because someone murdered our list. And that's not right. </PCN_ACTOR

1903. PCR1000 BandScope commands

Newsgroup: rec.radio.scanner
Date: 1998-03-16 00:00:00 UTC
From: kf5oj@iamerica.net
Message-ID: <350d3eff.380183@news.iamerica.net>
Source record: 166797

Additional PCR1000 commands can be found at:
www.ibelings.com/pcr1000.html |or| 208.133.53.38/pcr1000.html

****
Icom PCR1000 Band Scope commands.

The basic command to turn the bandscope function On is:

ME00001200501000125000 + CR + LF

The command breaks down this way:

ME00001 20050100012500
ME00001 is the prefix. It's always the same.

ME00001 20 050100012500
20 is the number of samples. It must be a 2 digit HEX number
represented in ASCII. Add leading 0 if necessary. Calculate
this number by dividing the Scope Bandwidth by the step size. For
example in the +- 200 Khz span the total bandwidth is 400 Khz. If the
step size is 12.5 khz then 400/12.5 is 32 or 20 Hex. If you get a non
integer answer for the initial division then increment the sample
number by 1 or 2. You can arbitrarily set the sample higher
(SLIGHTLY)
to allow the display to be moved inward from the edges of the scope
display.

ME0000120 05 0100012500
05 is a sample rate value that detiremines how fast the
scope is swept and in the Icom software is either 05 or 28. This is
interpreted as a hex number and must be 2 digits. The practical
values
for this runs from 01 (very fast and resource intensive) to about
70 (very slow and nearly useless). Putting 00 here is not valid.
In the Icom software the number of samples detiremine this
value. Sample numbers above 10 hex use 05 and those 10 Hex or lower
use 28 Hex.

ME000012005 01 00012500
01 This is the On/Off characters. If they are 00 then
the bandscope is OFF. If they are 01 the bandscope is ON

ME00001200501 00 012500
00 is a padding value and must be there.

ME0000120050100 012500
012500 is the step size expressed in HERTZ. It must

be 6 digits long, padded with LEADING ZEROS. Examples are 001000 for 1000 hertz (1 Khz), 030000 for 30 Khz and 100000 for 100 Khz. The bandscope accepts values down to at least 10 hertz but the Icom software displays a LIMIT warning at 1 Khz and at 100 Khz. You must limit how small the step size is (for a given scope width in (Khz) to prevent the number of samples from getting too large.
Eg. (Bandwidth/step) CANNOT exceed FF hex or 255 decimal.

The Band Scope commands appear to be insensitive to mode and bandwidth settings except for the fact that it doesn't work in USB, LSB or CW.

Typical Band Scope Commands:

ME00001C8050100001000 +- 100 Khz @ 1 Khz
ME0000164050100001000 +- 50
ME0000132050100001000 +- 25

ME0000104280100100000 +- 200 Khz @ 100.0 Khz
ME0000100280100100000 +- 100 Invalid
ME0000100280100100000 +- 50 Invalid

****

The data is returned in 38 byte packets. The LAST digit of the packet

is discarded in calculations making the usable packet length 37
digits.
The packets begin with the Letters NE1 followed by the 2 digit hex
packet number. The Packet numbers run from 00 to F0.
The available packet numbers are NE100, NE110, NE120, NE130, NE140,
NE150, NE160, NE170, NE180, NE190, NE1A0, NE1B0, NE1C0, NE1D0,
NE1E0 and NE1F0.

NOTE that ONLY the 4th digit in this prefix changes.

Having 16 packets holding 16 levels allows a Maximum of 255 (numbered
01 to FF..00 is invalid) samples.

The packet prefix is followed by 32 bytes that contain signal level
information for EACH sample (16 per packet).

Each byte pair is a hex number (in ascii) that can run from 00 to FF.
The
Bytes in packet NE180 represent the first 16 samples UP from and
including the displayed frequency (in ascending order). The bytes in
packet NE170 represent the 16 samples BELOW the displayed frequency in
descending order. For example the following:

NE18020202020202020202020202020202020

NE1 80 20202020202020202020202020202020
NE1 is the fixed prefix

NE1 80 20202020202020202020202020202020
80 is the packet number. Second digit ALWAYS 0

NE180 20 20202020202020202020202020202020
20 is the sample signal level (20 Hex) at the displayed
frequency

NE18020 20 20202020202020202020202020202020
This is the next sample level UP from the displayed freq

The next 14 values represent the next 14 sample levels. If less
samples
are needed, the higher samples are set to 00. If more then 16
sanple levels are needed Up from the center freq, then the next packet
NE190 hold the values.

For the following:
NE17000000000000000001111111111111111

NE1 70000000000000000001111111111111111
NE1 is the fixed prefix

NE1 70 00000000000000000001111111111111111
70 is the packet number. Packet 70 is the first packet BELOW the
center frequency.

NE17000000000000000000111111111111111 11
11 This is the first sample level
BELOW the center frequency.

NE170000000000000000000111111111111 11 11
11 This is the next LOWER sample
level and so on. In these examples, only 16 (10 Hex) samples were
specified. 8 samples are provided here below center freq and the
corresponding 8 above center freq would be in the NE180 packet.

If more then the 32 samples that can be displayed with NE170 and NE180
were specified then additional packets would be sent. For example if
48(decimal) samples were specified then the following packets would be

returned: NE160 would have 8 samples (in the UPPER 8)
NE170 would have 16 samples
NE180 would have 16 samples
NE190 would have 8 samples (in the LOWER 8)

Note that they are sent in ascending order from NE160 to NE190.
A rough indication of the number of packets needed for a given sample
size is (Number of samples)/16 plus 1.

Sample in order sent (This is a continous string):
NE160000000000000000000000030180FA61F14
NE1701F2B0C0F7E030C2B85088E080F2B4314
NE1801B8E181830085FEC6603083001143003
NE190010301010127010000000000000000000

When Band Scope is first turned ON or is turned OFF, ALL 16 packets
are returned with samples set to 00 (except packet 80).

I am with you on this one Richy Rich, although a little confused about the word 'voilence' as I believed this to be a rare form of doily making. Should this be in the above paragraph then it is a feat that should be lauded, and not the person castigated against. I find this also in the word 'agressive' which I belive must be a mistype as no one has performed the South American ritual 'El aghress' for some time, so for this person to be an agressive, ie one who performs the ritual, would be rather hard. Aside from this I am in total agreement.

It can be done, but to pull this off would require some type of tachometer feedback loop and a driver circuit on the motor. Then set the loop for half speed (It probably would not be stable much below this). The circuit will give it the needed power to start up, but will regulate the speed.

Hi, Don,

I never got your email so I've no idea what the rest of your message said.

Without wandering too far off-topic (if possible at this point) I was going
to suggest that certain agencies have rubber-stamp authority. I'd be _very_
surprised if any request has been denied when certain agencies claim that
a threat to "national security" exists. I'm _not_ talking about your
average city police force.

Please email me again -- this is way off topic at this point! :-)

Hey Dennis,

The best thing is to use a kill file. If webtv software doesn't offer one, complain to them, not the group. Unfortunately, all you have done here is to give those following the flame wars another thread to follow, and those of us who have grown tired of it another thread to add to our kill files. Once you start using your kill file, this group looks pretty much normal again. By the way, I'd suggest you also use a kill file on authors, especially Mackey. When I was following this crap, it was obvious that Mackey was creating most of the problems, although Cheek does add fuel to Mackey's fires. But, this is an open forum. It is up to you to "STOP IT N O W." It is not their responsibility to control what you choose to read. *I* made them go away in my domain, and if they bug you that much, you should too.

Happy scanning.

I guess the point I was making is that politicians seem to believe that
legislation can change physics.

> connections. It is pointed kinda westward. Any body have any thoughts???

Hi Dave,
Did you try the BC9000 on available 800Mhz freqs to see how well
they were coming through? I'm thinking two things :

1) Your cable is severly attenuating upper UHF freqs so that
they just aren't making it to the receiver

2) The 51 is double conversion and very sensitive. This will
make it highly sensitive to signals...especially if you
hook it up externally. All those strong signls are simply
overloading the poor little sucker such that it is desensing
and therefore pretty deaf.

So what kind of cable are you using? RG-58? RG-6? RG-8? Different
cables will attenuate(weaken) signals differently. And the longer the
cable run, the more attenuation will occur. 40 ft isn't that long
but you're getting into the area where you have to start worrying
about length vs. cable quality.
My guess is that if you are in a "rural-ish" locale, #1 is your
problem. If you're in an "urban-ish" area, #2 is the culprit.

Strong signals,

Thanks for the heads-up on the Phoenix digital moves.
Originally, I had heard that an 800 mHz trunked system was coming in
by 1997, and that 70 frequencies had been applied for; (that was in
1995).
So while this may be bad news for scanner owners, it also is three
years later than I'd heard originally.
The article says it'll be tougher to hear on a scanner.
Well, "impossible" *is* tougher, but still impossible to monitor!--Rick

Source record: 166810

That's probably an understatement 8*) My guess is, a few relatively small, one-tower towns with relatively few topographical perversities and low traffic volume will be enticed to switch over in the next few years to give the project some measure of credibility. These users will no doubt play around with the 'features' - digital included, and will *probably* find themselves back on 12.5 KHz analog before long. ...And their experiences will heighten the reluctance of other departments to join in the experiment. For all the hype, my gut feeling is that most agencies are watching APCO-25 with some fear and trepidation.

Scratch beneath the surface, and I think you'll find APCO-25 is being pushed most heavily by the radio manufacturers (hardware and firmware), who stand to make a LOT of bucks, both in initial sales and in upgrades and maintenance (and gawd knows, there's going to be a hell of a lot of maintenance to `keep' these systems digital-grade). The biggest fluff in the sales-pitch is political, and has little if anything to do with finding solutions that best meet the needs of the guys in the field.

Having a dozen mutual aid/incident tactical freqs programmed into wide-band, synthesized radios may not be 21'st century, but it'll work reliably, and that's what most agencies want/need. Hell, the incandescent light bulb probably isn't 20'th century, but most of us wouldn't trade 'em in for glowing mood-crystals 8*)

1917. Emergency Alerting System mystery

Newsgroup: rec.radio.scanner
Date: 1998-03-16 00:00:00 UTC
From: johng@comm.mot.com
Message-ID: <johng-ya02408000R1603981322230001@news.cig.mot.com>
Source record: 166811

The "Emergency Alerting System" is the replacement for the Emergency Broadcast System. This system is used by federal, state or local authorities to alert the public to severe weather, disasters, etc. A compatible system is also used by the Nation Weather Service to provide selective digital alerting via their 162 MHz VHF "weather radio" transmitters.

The technical standards for this service are provided in Part 11 of the FCC rules. The standards mandate a data signal at 520.83 bps using 2083.3 Hz mark and 1562.5 Hz space frequencies for the audio frequency shift keyed signal.

My question: Does anybody have any idea of the reason for using such an unusual data rate and choice of mark and space frequencies?

If you take the frequencies and scale to a 600 bps data rate you end up with 2400 Hz mark and 1800 Hz space. I suspected that this coincided with a standard CCITT or Bell data standard, but this doesn't appear to be the case. If this had matched an industry standard, this would have allowed a designer to use a standard modem chip set with a different clock freq. Keeping the data rate non-standard would have added a minor element of security to the system.

There must be some reason for such a bizarre choice on the part of the system designers. Can anyone shed any light on how this data rate and mark/space frequencies were picked?

You can buy unblocked Icom, Bearcat Uniden etc... scanners in Canada
The only company selling blocked scanners is Radio Shack who thinks
USA laws apply in Canada...

However there have been posts on this NG about US Customs seizing
these devices at the border...

The carbon tends to come off the back of the keypad when damp.

I fixed one of these by painting the back of the keys with silver
conducting paint as sold for repairing heated rear windows in cars.
Been working fine for a couple of years now.

It really isn't any different than any other antenna that you can buy these days. If it were made any better, it would not be any more effective or last any longer....

I've had mine for at least three years (in my attic). It works damn well for me and I recommend it highly.

Jeff,

I am glad to see that the FCC is still giving out licenses to idiots.

YOUR GOVERNMENT RE: NSA monitors most if not all phone voice and data
traffic from the U.S. to overseas locations, and GCHQ which is the
Britist equavalent of the NSA, monitors OUR domestic phone traffic, and
then turns over the good stuff to the NSA. This is to avoid breaking the
laws about domestic monitoring.

And let's not forget about the nosy people at the phone company who can
listen at random, as well as the FBI. "Oh, doesn't the FBI need a
warrant to do that?" All those "confidential informants" that the FBI
never reveals are really illeagal phone taps.

I could go on, and on, but never ANYTHING on the phone that you would not say in an elevator full of FBI Agnts!!!

If listening on the cell frequencies are such a crime the what is it that they are trying tio hide or keep others from hearing? Is it that those that got caught happen to be CONGRESSMEN or is it the DRUG DEALERS that are really running the airwaves? I for one do not see any harm in listening to the phone calls of anybody be because it's there sometimes I will. I can listen in on any cordless phone most of the mobile phones in the 900mhz range but why is it a crime that only cell frequencies are the ones that the GOVERNMENT is afraid for us to listen in on? So tell me why and I will not do it again.

Could you not just fit a smaller diameter pulley on the drive motor?

Also, most cheap tape recorder motors have a built in regulator of
sorts. It's a centrifugal weight that breaks contact when the motor
starts to turn too quickly. You could increase the weight (blob of
solder?) or loosen the spring (bend it?). In fact, I think they have
small fine speed adjustment screws which could be cranked. It may be
prudent to reduce the voltage going to the motor to help reduce flutter
to tolerable levels if you went this route.

I'm sure this will work.

You can also get the program WINTONE 2.02 at Cnet under there
www.downloads.com section, search for wintone or go to there web page and
download it there, wish I could tell you but dont remember off my head,
e-mail me back and I'll find it for you. This version has the VOX feature
and also decodes tones into #'s.

>peeking through your drapes).

Not at all.

If you and your girlfriend are "doing it" on a public beach, and I'm
sitting there watching the sunset, is that "voyeurism"?

If you and your girlfriend are "doing it" on the front lawn of your house,
and I happen to see you while I'm walking by, is that "voyeurism?"

If you and your girlfriend are "doing it" in your bedroom with the bay
windows wide open and all the lights on, and I happen to see you while
I'm walking by, is that "voyeurism?"

If you and your girlfriend are "doing it" in your bedroom with the bay
windows closed and all the lights off, and I walk up and peek through
the windows as I'm walking by, is that "voyeurism?"

In the case of the latter, absolutely, but in the case of the former
three, absolutely not.

Using your definition, everyone on the planet should walk around with
their heads looking down at the ground, less they become "voyeurs"
overseeing something you are doing in public.

It is this last point, Jeff, that you seem to be confused about.
A public telephone call, on a public telephone network, is usually
sent over a bounded channel (yes, telephone companies also use
microwave and other unbounded media to relay signals, but that is only
CO to CO, not point-to-point.)

Contrast this to a cellular phone call, which is sent over an
unbounded, 'public' channel.

In other words, using a cell phone to have a conversation is no different
than you and a friend having a conversation in a standing-room-only
Yankee Stadium, and 'expecting' your conversation to be 'private'.

>Wire-tapping someone's telephone has been illegal for quite a long
>time. Now ask yourself how listening to a phone conversation
>via a scanner is different from wire-tapping that party's phone.

>Your intent is the same - to spy on your neighbor.

Intent is irrelevant. The difference is in the medium of transmission. With RBOCs, the phone to your house is a pair of copper. Nobody can "tap" that unless they physically connect to your phone line.

Should you expect people to shut off their radios if you make a 2 meter autopatch phone call? Why do you have an expectation of privacy for a cell call and not one for a 2 meter autopatch call?

>It's just a pity that we need such a federal law in place of what
>should be a moral obligation to respect the privacy of your neighbors.

If you want your privacy respected, don't "do it" in a publically accessible medium. Keep your shades drawn, or conversations encrypted.

>If you want the EPCA repealed, then you should also fight for allowing
>unlimited wire-tapping without court intervention.

Wire-tapping is not the same as listening to broadcast transmissions. Furthermore, wiretaps are used in criminal/civil litigation, where certain protections must exist to protect against abuses by law enforcement authorities. This is a marked difference from people listening to their scanners.

The problem with the EPCA is that it sets a dangerous precident in law-making -- if the government can dictate where you can listen using a radio you can make in your own home, pretty soon they will start telling you WHAT you can listen to.

> via a scanner is different from wire-tapping that party's phone.
> Your intent is the same - to spy on your neighbor.

A telephone conversation between two hard wired phones stays over phone lines throughout the conversation (except with digital ong distance satelites). A cellular phone is nothing more than an FM radio transmitter. Listening to a radio signal would be similar to standing on a street corner and hearing two people yelling at each other. In both cases, the person listening never intrudes upon anyone else. Until 1986, the federal laws regarding telephone privacy treated radio-telephones in this manner.
I personally do not sit around listening to cell-phones all day. However, I feel I should have the right to intercept any radio signal passing through public airwaves. The cellular-phone industry should not tell customers that their unencrypted FM radio signals are somehow private simply because Congress said so.

Have you tried my PROgramit SW at http://www.qsl.net/ka2pyj. Don't be
confused by the discussion of a circuit that is used only in scanners
that do not already have a built-in interface. Look for the special
instructions for the PRO64 on the main page. The PRO64 has very limited
computer control capability (You can only download freqs), so no
program for it is worth $129.95. If you like PROgramit, I ask for a
small registration fee of $12.00

Public address systems like they use for school and company announcements. I was thinking that they would be in the 140-150 Mhz area. I was thinking that someone might have a frequency counter that would be able to find out or people that would just happen to know that kind of stuff off hand. Thanks!

I found the scantenna a good performer but it didn't stand up to the elements. It was up for about 4 months and the wind bent it in half, but for the price you can't go wrong. I live in the north country and it was ice/wind that did it in.

May I interject? The airwaves belong to the public, and last time I looked, a cellular telephone was nothing more than a radio. The cellular industry put one over on the public, stating that a cell phone was as convenient and secure as a landline. Anyone with any technical knowledge of the subject knows that's a crock. The bottom line is if you don't want me listening to it, then ENCRYPT IT!

What I would like for the state of Indiana, is a state 800 Mhz system.
The state sets up the equipment in each county. No local systems. Lets
you be linked to any part of the state. Put all fire, police, local
government services one one system.

Summary: New BC235 works great, but antenna seems suspect...

I had recently sold my bc200xlt to upgrade to a 235 trunktracker. The bc-235XLT arrived this AM. Had time to program it before I left the office and test drive it on my trip today and home. I put my old 100xlt on the seat next to it for comparison. First impressions:

Good news: It was easy to program, even the trunked channels. It picked up most strong signals first (before the 100xlt), which I attribute to the scan speed. The trunk tracking works perfect in State College, the place I went today and (conveniently) the only place in the immediate area using a trunked system.

Bad news. Is is harder to read, the characters on the display are smaller. It seems to have less volume than the older handhelds. Last but not least, it did not seem to be as sensitive to marginal signals, and important issue in the rural area I travel. It completely missed some signals caught by the 100.

Question: Have you seen anything one way or the other on the antenna performance? After a while, I tried swapping antennas, and the 235 performance improved dramatically! (The 100 performance dropped off accordingly.) Is the antenna on the 235 tuned specifically for the 800 mhz range at the cost of reception in some other areas (which would make sense since it is marketed as a trunk tracker)? Maybe the old 100 antenna is better tuned to a broad range of signals; at least it certainly seemed to perform better with the 100 antenna.

To do it properly involves some machine work.

You could use an old VCR with a long tape and get 8 hours on the audio track. Might be able to find a wrecked VCR at a hamfest where video is screwed up but audio is OK.

Hi. I just bought a Pro 26, and read mixed reviews. Is it any good?
I only paid $199.00. Now, I just found out that one can use IF
frequencies to listen to cell calls, and it works! But, I already
ordered a full coverage logic board from Javaition (sp?) Will the
reception be better when I get the board using the correct frequencies
as opposed to the IF frequencies? Also, I just noticed my computer
interferes big time when it's on. Would using an outside antenna be
an option I should consider? Thank you for your replies.

Do cemetery workers prefer the graveyard shift?

Sure if some one takes his or her good time to research the format of
19200, or even 9600 baud mdts and sit down and write (wirte) a program
to do the decoding. But the fellow who wrote the original MDT program
must be off into better things. He had to do a great amount of work
to get the program where it is today.

One option is if you have an old VCR your not useing, you can use the audio input jack on the VCR to get 6 hours (the length of a vcr tape in slow mode) on one tape and the sound quality is good.

It ain't a dumb question, but there are no
real good answers. There are a few choices,
but..... well, to modify a standard cassette
recorder into a long play version means to
gear down the drive system. You'll have to
figure out the drive arrangment in the first
place and study the pulleys and capstans.

Then apply the principle of the bicycle sprocket
where the smaller the drive wheel and the larger
the driven wheel, the slower it goes.

You'll find this venture to be almost impossible
unless you're a mechanic and a machinist. So we
take a look at the alternatives......

First is to electrically slow down the motor.
Except that won't work. You won't get it appreciably
slowed by lowering the voltage/current because
torque drops off faster than speed.....and any slowdown
at all means the tape will fail to start up, probably
at a most inopportune time.

Next is to find a lower voltage drive motor.
This might work since torque would be compensated
and it might go slower than the stock motor. Then
again, it might go faster. Who knows?

Basically, we come to a point where it's determined
that it's fruitless to try to hack the recorder.
Fraught with problems for so little gain.

But there is another approach or two that hold promise.

Like an "Automatic Tape Recorder Switch", that's operated by the SQuelch signal of the receiver. Using the REMOTE function of the recorder, the ATRS will start the recorder when SQuelch breaks and pause it when SQuelch sets. You'll still only get45-90 mins of audio.....but no dead time at all!

I have used one tape for weeks recording seldom used frequencies.....but.... when they are used, it's hot! But even on highly used freqs, you'd be surprised how long it takes to record 45-90 mins of pure audio. So this might be your solution.

The simplest version of an ATRS is an NPN transistor, say a 2N2222A with a 10-k resistor on the base going to the scanner's squelch signal; grounded emitter; and a relay coil in the collector shunted by a diode suppressor, and Vcc of some value tied to the high side of the relay coil and the cathode of the diode. The anode and low side of the coil go to the collector.

Then you bring a 2-wire cable to the COMMON and N.O. contacts of the relay, to go out the scanner to the tape recorder's REMOTE jack. Do NOT ground either of these two wires to the scanner!!!

Vcc for this circuit should be pretty close to the rated coil voltage, (5v or 12v). And there you have it in a nutshell.

Another option is to go more modern with a solid-state recorder, using your computer's sound card and one of the shareware or freeware recorder programs that are floating around. Some of them are "VOX" operated, meaning there is no recording when sound is not present. In this case, you'd tap the scanner's audio at some point ahead of the SQuelch, probably at the input to the audio power amplifier and feed it to a jack on the scanner. Patch this jack to the LINE INPUT of the sound card, and run the software.

One freeware such program is "voxrec.zip" that can be found at my FTP site: ftp://204.210.11.204/intrface/ It works pretty good and there are others out and about. So long as you have plenty of free space on your hard drive, you can record several hours' worth of continuous audio. No free space, and you're back to square one.

Maybe you'll get some input from others, but the above are your choices as I see them. Else buy that

$90 recorder....I guess.

He didn't respond to anything you said, dummy.
He said he ignores what you say. And he has,
thus far.

But it is easy to ignore what you say because
you are very ignorant, Hermie-baby.

LATEST NEWS!!

Seems Johnny Mackey hasn't been feeling all that
well lately. He's been lazy and shiftless,
and no wonder why!!! He had an 18-ft TAPEWORM!

That damn tape worm was so big and stout that
the standard worming medicines wouldn't touch it.
The tapeworm thrived on everything thrown at it.

But fortunately for Mackey, he had a smart doctor.
About two weeks ago, the doc says, "John, come back
tomorrow and bring me one banana and four vanilla
wafers. Desperate, Mackey agreed.

Next day, bandanna and vanilla wafers in hand, the
good fellow Mackey popped into the doc's office bright
and early. The doc had Mackey lay out on the table,
bare-arse up....and casually shoved the bandanna and
four vanilla wafers up where the sun never shines.

Then he told Mackey to come back each day for the
next five days, each day with one bandanna and four
vanilla wafers.

Puzzled, but desperate, Mackey did as the doctor
ordered, and each day got a bandanna and four vanilla
wafers shoved up his monstragonous derriere.

Finally on the 6th day after the same procedure,
the doc ordered Mackey to come back one more day,
but this time with just a banana - no vanilla wafers.

So on the 7th day, Mackey boogied back into the
doc's office and jumped right up on the table.
The doc placed a brick under Mackey's groin area,
and then slipped the bandanna in.

Then he grabbed a 5-lb sledge hammer and held
it up over the brick....and waited.

....and waited.......

After about five minutes, the tapeworm stuck its
head out and bellowed, "Where's my damn vanilla
wafers?" at which time the doctor lowered the sledge.

Whammmmm-o-kaaaa-blammo!

End of tapeworm. Happy Mackey?

This might otherwise be the end of the story,
except if you get to wondering how's come Mackey
snivels and sings soprano these days.....

The sledge hammer hit a little off center.....

We interrupt our regular programming for this
special Report picked up from the dock workers
down along the Portland, Oregon, waterfront:

Seems last year, our cherished and highly admired
John Mackey wanted to work around boats and water,
so he applied for a job with the fishing fleet.

Surprise - he immediately landed a position as an
Apprentice Baiter, putting anchovies on customers'
hooks and spreading chum on the water around the
fishing holes.

He wasn't bad at the work with the result about
a year later, Mackey was promoted to Journeyman Baiter.
Along with that came a pay raise from minimum wage
to six bucks an hour. Man, was he ever happier than
a cat in a sandbox.

He was so happy that it motivated him to learn all
there was to know about the arts and sciences of
baiting hooks and spreading chum. He got so good that
week, the fine feathered fellow was promoted again....

....from Journeyman Baiter to Master Baiter.

And now we return to our regular programming.

1982. John Mackey's Headaches Cured!

NEWS FLASH!!!

It is now well known that Johnny Mackey's 20-yr
span of severe, debilitating migraine headaches
has come to a sudden and dramatic cessation.
But in the words of the immortal Paul Harvey,
here is "the rest of the story".....

Seems that our good man Mackey suffered utterly
horrible headaches for the last twenty years.
He went from doctor to doctor and clinic to
clinic seeking relief that did not come. No one
had any answers; medications had no effect.
Exploratory surgeries offered no clues.

Finally, Mackey heard rumors of a miracle
doctor down in Mexico who could cure headaches.
Spending his life savings on a bus ticket and
travelers checks, Mackey headed down into the
bowels of old Tijuana, Mexico, to see the legendary
miracle doctor.

The doctor went over Mackey with a fine toothed
comb, from head to toe....and after a few days
of rigorous testing, he declared to Mackey that
while he couldn't find the cause of the headaches,
he *could* definitely cure them once and for all.

He explained that somehow the problem was centered
in Mackey's reproductive system and that castration
was the ONLY way out. At about that time, a monstrous
migraine hit Mackey with such force that he readily
agreed to the surgery on the spot. "Anything!"
declared, Mackey, "Anything to relieve this pain!"

Castration was summarily performed on the spot,
and within minutes of coming out from the anesthesia,
Mackey declared that he couldn't remember feeling
so good! The headache was truly gone! What a feeling!

Mackey returned to Oregon, euphoric, elated and so
inspired that he managed to land a job at the county
sewage treatment center on the first try.

Prosperity and happiness looming for the first time in his life, Mackey decided that the first step for his "new life" should be to buy a whole new wardrobe from head to toe.

Shopping in one store, Mackey decided that new underwear were in order, too, so he asked a grizzled old salesman for size 34 BVD's. The salesman, having been around for a long time, looked quizzically at Mackey's humongous midsection and politely suggested that size 54's would be much more appropriate.

Mackey huffily declared that he'd been wearing size 34's for twenty years and there was no damn sense in changing now. The wise old salesman scratched his chin for a moment, and casually replied:

"Well, now son, that may be so, but don't you know that wearing too tight underwear causes headaches?"
.
.

Page two.....

Hey Mackey, you old degenerate reprobate, you!
How's it happening, good buddy? You doing okay?

Good.

I decided to slap you back on my Shit List again.
I won't be seeing your posts anymore, so let's
see (once again) how you manage without me calling
attention to your Down's Syndrome; quadrasexuality;
hermaphroditia; and general lack of well being.

Let's see if you can forget me even half as easily
as I can forget you.

A buck to a nickel says you can't keep me out of
your posts, by name, reference, or inference, for
one year.

Another nickel to a buck says you can't refrain from
off-topic posts for a year.

A final nickel to a buck says you can't limit yourself
to on-topic posts for the next year.

We'll see.

Adios, Master Baiter Mackey.

Poof! You're gone.

Radio Schloque does (or did) have it....for $129.95.
Check with any store.

Else get the freeware version that's just as good
or better.

Now that I've got your attention:

Do you want a software package that:

1. Feeds off of the "line-in" port of your sound card? (For you
scanner).

2. Runs three (3) simultaneous functions in a clean, pleasing display?:

1. Record as a *.WAV file on demand and voice activated?
2. A window showing a frequency analyzer in oscilloscope
display
3. A window that shows phone number tones converted to numbers
that are saved to a file that can only be purged by the PC
operator?

So would I.

If you know of piece of software that can do all that, would ya tell me?

(please respond to group).

Tandy did come out with a "computer software & interface" package
for the PRO-64 and PRO-2041. The part number is #11996428 and
the price was $129.99. It wasn't exactly a raging success since they
didn't go out of their way to advertise that capability of the
scanners and the package was a little pricy. I don't believe it ever
was stocked in any stores and was available only special order.

I wouldn't call it useless, it's actually very useful and beats the
hell out of entering a bunch of frequencies using the keypad. For
information on building the interface cable and software, check out:

Ken's Radio Scanner Page:

http://www.access.digex.net/~kplotkin/scanner.htm

There are links there to practically anything you might want to know
about the PRO-64.

1988. Re: Discone for low band reception (30-50 Mhz)

Newsgroup: rec.radio.scanner
Date: 1998-03-16 00:00:00 UTC
From: John Smith <jtsmith@mindspring.com>
Message-ID: <6eiens$7kk@camel12.mindspring.com>
Source record: 166916

Well the discone is a very good compromise antenna.
If you don't like swapping antennas around and want
reasonable coverage on the HF shortware bands
check out my comments on my web page
at http://www.mindspring.com/~jtsmith
I use an array of antennas for reception at
my ham station, but the discone mates up very
well with the ICOM PCR1000. It's lossy performance
keeps intemod down in the radio(which is very hot) and
works very well as a compromise on all bands through 950MHz
I feed the antenna with RG213 which has a measured loss
on my spectrum analyzer/sweep generator of only 2.5db
at 500MHz. I am relatively happy with that. It is mounted on my
chimney about 35 feet in the air.

So check one out. I got mine at radio shack for $70.
I use a 102inch steel whip instead of the loading coil
it comes with. The whip was $20.

Have fun

I brought a chrome plated brass coupler and the
102inch steel whip at a radio shack store, went to
the hardware store and brought a 5/16-18 corse tap
tapped out the end of the coupler, screw the 102inch
steel whip into it screwed the coupler into my old
radio shack discone ($70) antenna type, and vola
great working discone.
These parts are available at most stores. Wish I had
the part numbers for you....

> ... weird stuff on 220.210 Mhz. There is a tone every fifteen seconds
> or so, and every once in while there is some garbled speech.

The actual frequency would have been 220.2075 or 220.2125, with a 4 kHz bandwidth. The tight bandwidth and slight mis-tuning might account for the garbling, though specialized modulation techniques are encouraged in this band. The normal assignment is part of a 5 channel trunk:
220.0575, .2075, .3575, .5075, .6575 or
220.0625, .2125, .3625, .5125, .6625 (mobiles are 1 MHz higher)
Check the first freq. for each group for an ID or more frequent activity.

Old sailor's rule: the distance to the horizon in nautical miles is
the square root of the the observer's elevation in feet. If you're on the
bridge with your eyes 49' above the water, the horizon is 7 nautical miles
away (actually 7.4, but close enough). If you're not an old sailor,
multiply the figure by 1.2 to get statute miles.

You're wrong. The Pro 26 is not discontinued, and i did buy it at a
Radio Shack store, nor has it ever been lower in price. Even the
review I read by Rich Wells dated January 1998 didn't say they were
being discontinued, and now that they were at $199.00 it would be the
tie to buy one. Call and ask if you don't believe me. Not to
mention they are still selling them overseas and in Canada. Besides
what does this have to do with my questions even if you are right?

"James Kearman" <jkearman@javanet.com> wrote:
> What kind of scanner do I need to listen to phones on planes?
You would need 894-896 MHz coverage, but most of the AirPhone systems
are now digital. Except for Delta and a few other carriers, use of a
scanner onboard is a violation of the the airlines (and FAA) rules.

> Could I also listen to the pilot?
For that you need an AM receiver covering 118-137 MHz. The scanner
would still run up against the same rules.

> Could I use my cell phone to call another passenger on the plane phone?
AirPhones originate calls, they don't accept them. Were you to activate
your cell phone while in flight (to say nothing of actually trying to use it),
you would have the aircrew, the airline, the FAA, the FCC and several cellular
providers vying for rights to string you up. Don't even think about it!

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

800 MHz Air to Ground Telephone [22.1107]

- - Airborne - -
Blk Ch 1 - Ch 29

10 894.0055 - 894.1735
9 894.2055 - 894.3735
8 894.4055 - 894.5735 Guard Band -
7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels
is assigned to each geographical area. Ground frequencies are 45
MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

Apart from idiotic answers from people who believe that everyone knows the freq's used for US Presidential visits overseas, those people should remember that this news group is read alround the world and isn't restricted to people just in the US!
163 mhz is used in the con us but on visits to Australia traffic has been noted on 412-413 mhz-mainly digital encripted, and 200mhz channels, this sometimes does cause problems as the US band plan isn't followed anywhere else apart from America. The 412-413mhz channels interfered with the taxi companies here and visa-versa to the Secret Service.
Suggest looking closely at freq's near existing S.A. Armed forces/Government Security services as well as FLTSATCOM freq's.
Sam.

2002. Scantenna

I just received my new Scantenna this morning and spent a coupla hours putting it up on a pole outside.

It seems to work well although it's way too early to tell yet and I haven't been able to compare it to my discone yet.

One thing I did notice though, and which disappointed me somewhat, is the poor quality of the whole antenna. It looks like it's been made the way those really cheap and nasty TV antennas from the far east are made.

I can't help wondering how many days it's gonna take before all kinds of weird electro-chemical effects start happening between the various pieces.

Does anyone else have any comment on this antenna?

From the New Scanner Users FAQ :

Your Scanner On A Plane

Federal Aviation Regulation(FAR) 91.21, Portable electronic devices, paragraph (a) states that "no person may operate...any portable electronic device on any...U.S.-registered civil aircraft".

Paragraph (b) goes on to list exclusions to paragraph (a) which includes (1) portable voice recorders, (2) hearing aids, (3) heart pacemakers, (4) electric shavers or (5) "Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used."

Paragraph (c) goes on to state that the determination for safety in paragraph (b)(5) "shall be made by that operator of the aircraft on which the particular device is to be used." If you were to be a passenger on a private aircraft, this determination "may be made by the pilot in command" of that aircraft.

What this all says is that the FAA gives each airline the right to deem what electronic devices can and can not be used on their planes. So if you talk to that airline's ticket agent, ask them what their policy is. If this is not possible, when you board the plane, ask the captain or first officer if you can operate your radio receiver.

If permission is given, you will be cautioned to only use your radio during the cruise protion of the flight. So keep it off during taxi, take-off, departure, approach and landing phases of the flight. The captain will usually make an announcement as to when approved devices

can be turned on and when they must be turned off.

A word of warning : Don't mess around if permission is not given.
These
are FAA regulations. In case you don't know it, the 'F' in FAA stands
for
'Federal'. That means if you get caught, expect to see a US Marshall
or
FBI agent waiting for you when you exit the plane and prepared to be
detained for several hours. Get the hint? Enough said.

R1 existed well before the April '94 ban on cell receivers which
means it came fully unrestricted.

After this it came in two versions : cell-enabled(for government
and law enforcement, etc) and cell blocked(the rest of us). And
it was REALLY cell blocked as the entire 800Mhz range was omitted.

> 46-47 MHz fine though...........

Go to Radio Shack. Pick up a copy of Police Call Plus. In the
introductory
info is a good explanation of how your radio works. The concept behind
the heterodyne reciever and how it mixes frequenices to receive the
frequency
you desire via digital synthesis is explained.

It will also detail the difference between double and triple conversion.
Triple inversion removes most images(which are are created in the first
and second stages due to the "mixing" mentioned above) which is why your
PRO-90 won't receive cellular on 900MHz like your double conversion
BC200XLT.

The areas in which images are head vary from scanner to scanner due
to design issues like up/down conversion and the IFs picked. The PRO-90
can receive cell images...just in a different spot and they must be
much stronger to "get past" the third stage conversion.

> scanner walk me through the process step by step?

From what I see about this model, it has no facility to search
between two programmable(user-specified) frequencies. It only
has band search which means you're stuck searching between
the ranges pre-programmed at the factory.

Typically, such radios have a BAND key which is keyed
repeatedly to select the pre-programmed band to search. Once
the desired band is displayed, the radio is left alone and
the search begins automatically.

The newer BC60XLT-1s have something called a "programmable
chain search" which I am not familiar with...yet. Sounds
like multi-limit programmable search bands which can be
linked together. We'll see.

Good luck!

I put up an outside antenna, a new radio shack Omni-directional 20-042 page
57
current catalog, covers 25- 1300 , Well I have a Bc9000xlt In my work
room, hooked it up and it seems to work really good. Ok so i tried
hooking up my trust Pro 51 7a3 version(you know what that means
right?) and it scans right thru the 800-900 freqs. with out Picking up
any thing. Strange???
when I put the factory rubber ducky or the Radio shack extendable
antenna
back on it it picks up all the 800-900 stuff? Does this mean I have a
problem with the Antenna or that the pro 51 just does not like outside
antennas, The new antenna is right outside the window, 20 foot mast cable
is
40 ft long. new cable and bnc and type f connections. It is pointed
kinda
westward. Any body have any thoughts???

One item that's common among you folks obsessed with eavesdropping on your neighbors - when you can't debate an issue, you resort to name-calling. I must have struck a nerve, eh?

>I could go on, and on, but never ANYTHING on the phone that you would
>not say in an elevator full of FBI Agnts!!!

That the government might be monitoring phone calls doesn't bother me in the least. Individual rights has to take a back seat to national security, in my opinion. Feel free to disagree in an intellectual manner.

Better re-think that statement. (Consider light as E-M waves.)

>I'm going to laugh when they come into your house and take all of your ham
>gear claiming you can't listen to anyone.

Not likely. There are two broad categories of radio hobbiests - those
licensed to transmit, and those who can only listen. You might fall
into the latter category. That's fine - when I was young I was a listener,
having built a shortwave radio - that's all it took to get me studying
for my license. Now, unlike some scanner enthusiasts, I don't sit for
hours listening to my neighbors' phone calls, but rather carry on 2-way
communications with other amateurs around the Pacific. Anyone is invited
to join in (that's called a "round table" - three or more hams); no
eavesdropping takes place as we're all part of the conversation.

Hopefully, you can join us some day!

It's a long story, going back a few years. As you suggest, Mackey knows nothing about scanning. But Bill? You *must* be a newbie if you've never heard of Bill Cheek. He's published at least three books on scanner modifications, and . . . Oh, what the hell. I'll let him post his resume, if you must know. Anyway, Mackey resents Cheek's knowledge, Cheek likes toying with Mackey, and many of us simply use kill files <hint> to filter the crap out. Of course, we have to keep adding *new threads* to those kill files for some unknown reason..... <hint, again>.

2028. Need AOR 1000 help!!

A friend plugged the power supply into the headphone jack on his AOR1000XLT and saw a blue flash. I took it apart and can see no visable signs of damage (fried components, etc.)--the unit turns on, does not light up, no readout on the LCD, and only makes static out of the audio.

Anyone have this happen and fix it? I can do it, and would *really* appreciate either a narrative of the repair for this, or better yet a schematic and pcb layout.

Thanks a million, gang --Chris

If I recall correctly, I did slow down a cheap Radio Shack recorder by simply sliding the
motor pulley up away from the motor to reveal more of the motor shaft itself, then slipping the drive belt off of the pulley and on to the motor shaft, thereby changing the gear ratio..

Mike Stanton mstanton@centuryinter.net

To: along28@erols.com
Subject: Re: Technical Support?
X-Mailer: AOL 4.0 for Windows 95 sub 93

Mr. Long,

Unfortunately, you had not informed us about your antispam
measures in effect and all e-mail was returned to us. When
the technical support staff returns on Monday morning, I will
be sure that your questions are answered immediately.

Thank you for your patience.

Adam Goldman
Vice President - Technical Services/Customer Service

Apparently not! I have been emailing you on numerous occasions to try
and resolve a problem with your software and cable for the BC 895.
You have not provided me with any sort of reasonable technical support
nor customer service. There is a signature file which trails every
message I send and it specifically referrs the reader about my
anti-spam technique. This is a poor excuse for not responding to my
repeated requests. If you are still in business or on the Net could
you please contact me so we can get this matter resolved, because
nothing I or you have done to this date is working.

Thank you for your cooperation.

Sincerely,

Andy Long
Registered User of PC 895.

Note the sig file...

Anti-Spam Measures In Effect: Please remove the '28' to reply.

BB kindly keep you ethnic slurs to yourself.

Was it an ignorant assumption that only Americans would be reading this
thread? Absolutely.
Does it mean that all Americans are assholes? Absolutely not.

I deal with people from several dozen countries every day: US, Canada,
Mexico, Germany, U.K., etc.; and I do not consider people assholes simply
because they are from a different country than my own.

Your point on FCC regulations (not an act of congress) was well placed, but
the message was diminished by an unnecessary slur. Instead of slamming US
citizens for thinking of themselves, try enlightening them to your own
country's rules and regulations. I, for one, am interested in them.

S.T.

2044. Antenna Location: Outside or Attic?

Newsgroup: rec.radio.scanner
Date: 1998-03-17 00:00:00 UTC
From: tired_of_spam@this_address.com
Message-ID: <351096b0.9968477@nntp.a001.sprintmail.com>
Source record: 166763

I have a Scantenna that is about to go into production. It *may* be easier for me to put it in the attic as opposed to outside. Any comments on attic usage vs. outside? I know outside is ideal, but what kind of signal loss can I expect w/an indoor antenna? Is it negligible?

If you have the explicit permission of the licensee (and probably
any and all parties using the radio system) it is probably legal.
Without the permission of the licensee or users, you are clearly in
violation of the FCC rules regarding divulging the content of an
intercepted transmission.

>someone else in trouble.

Do you know something I don't know? As of this moment, I didn't know
that it was illegal to modify a scanner to receive the frequencies
which carry cellular calls. AFAIK, it isn't even illegal to receive
and monitor those frequencies... although I do believe it is illegal
to monitor or receive cellular transmission on those frequencies.

Unless Tauzin's bill has passed the Senate and been signed into law, I
do believe that the only rules in effect for modifying a scanner in such
a way, is if the primary intended use of the scanner is to receive cellular
signals.

Radio Shack apparently knows more about Canadian law than do most Canadians (at least in this newsgroup). Monitoring of telephone conversations transmitted over the radio is illegal in Canada, whether you want to believe it or not.

Don't bother arguing the point. I've been over this ground before, and I have the relevant Canadian statutes on my website.

2052. FreeTracker 1.1 released (BC895 TrunkTracker Software)

Newsgroup: rec.radio.scanner
Date: 1998-03-17 00:00:00 UTC
From: no.spam@for.me
Message-ID: <50111766394D20B8.68628924E29417B2.1727173F73B68D74@library-proxy.airnews.net>
Source record: 166771
Cross-posted to: rec.radio.scanner,alt.radio.scanner

http://www.autowinnet.com/freetrack.html

* Supports up to 25,000 "Virtual Channels" which are like the radio's normal channels, but add Callsign, Description, Color (for activity log), Alarm, location, hit count, and more. VChannels can be scanned for activity, or stored into your BC895

* Descriptions - You can store Descriptions, Callsigns, and Locations for frequencies and Trunk Talkgroups/ID's. When that freq/talkgroup appears, a description is shown, along with Callsign, City/State, etc

* Alarms - A Wav file can be assigned (or speaker beep) to certain freq/talkgroups, a Bitmap, a custom Script or a .RTF file that pops up while that freq/group is active. For example, have all local police codes shown when a certain police channel comes alive. I just added some Cool bitmaps that appear with local police and fire stations

* Colorful charts and graphs show you what frequencies/talkgroups are most active

* Powerful script language lets you create your own scripts, then schedule them for when you're away, or when a certain event happens on your scanner

* PerCon database lookups from their web page (stored as html) can be imported. Also imports from Grove, Probe, and PerCon Dbf files!

* Drag and Drop channel editing - throw any database entry to a channel, or vice versa. If that frequency is already assigned, it zooms to the channel # to avoid a duplication

* Activity Report is color coded - you can assign any color to any specific freq/talkgroup, plus bolded text

* Search Ranges - you can store up to 2,000 search ranges, then double-click them to activate an immediate search of that frequency range

* All BC895 keys are supported, allowing a virtual radio on your desktop

* FreeTracker can be minimized as a TrayIcon, with a feature-rich right-click menu for easy access to popular functions

* Database-editing in a simple grid. Click the record you want, and change any value. Menu allows selecting any record to zoom to that frequency.

* Communicate with your radio interactively - type any command in, and see the response.

* Power users can utilize the quick-command box. Simply key in a command word to change frequencies, channels, scan, hold, search, manual, etc.

Example Syntax:
f15189 tunes radio into frequency 151.890
c56 takes scanner to channel 56
Up arrow emulates SCAN key
Down arrow = Manual
Right arrow = Search
Left arrow = Hold
... plus about 50 more powerful commands

* Export all scanner channels/freqs to a text file or Dbase, then import back into the scanner at a later date.

* Complete logging to a file, or printing

* Export your VChannel/talkgroup database to a HTML file for posting on your favorite web page.

* Multiple copies can be run for multiple BC895 scanners

I guess you could argue it both ways.

WASHINGTON, March 17 (UPI) - A Senate committee (Tuesday) is weighing computer privacy rights against law enforcement's need to crack the encryption programs that sometimes protect the records of drug traffickers and terrorists. Pending legislation comes down on the side of privacy - encouraging the use of unbreakable encryption programs and allowing U.S. companies to export that software abroad.

Radio Shack doesn't sell unblocked scanners because of company policy
from Fort Worth, it has nothing to do with Canadian laws. As far as RS
is concerned Canada is just another US State...

If they are going to broadcast it into my airspace then I should be able to listen to it. If they don't want me to do that then they should encrypt it in some way. I don't listen to these frequencies, but I feel the same for all frequencies.

Yes. I have had excellent luck with attic antennas on several
bands, HF to UHF, as well as "outdoor" antennas, for ham use. Your
scanner may be limited by far-field propagation, so any loss due the
frame construction of your house is negligable.
As a rule, I try to keep my receive-only antennas indoors, and
have had no problems with sensitivity. The best part about an attic
antenna is that once you set it up- you forget it and it will
remain robust for years 'cause the transmission line and the
elements are in a very friendly environment.

Ummmmm actually it's the square root of *twice* the height (ft).
A 50' height above water is good for a 10-nm line of sight.

And the conversion from nautical to statute is to multiply
by 1.1363.

> BC line?

Wow, that's really weird. There should typically be
no DC voltage on the antenna terminal. However in the
case of the BC-200XLT, it is a possibility, and a
cursory review of the schematic suggests that it may
not be a problem.

See, several lines connect to the antenna terminal,
and while I didn't follow them around (lack of time),
there were diodes in there along with a resistive
load that certainly could leave a DC voltage there.

If the unit has problems, I'd look elsewhere for starters.

A 1994 law outlaws the importation and sale of
scanners that can be modified for cellular.

Dozens of other mods are possible, though.

> but there must be some project out there that allows bandscope
> simulations (realtime).

Well, you're biting off a big chunk, but
yes, it is possible. You would need to
sample either the 1st IF or the 2nd IF
of a triple conversion receiver as the
bandwidth of the 3rd IF is just too narrow
to be of any use.

For dual conversion receivers, only the
1st IF would be useful.

Then you'd need to amplify that tapped
signal by 40-50 dB first, and then MIX
it with a swept oscillator signal and
feed the output to your scope along with
trigger pulses synch'd with the swept
oscillator.

Quite a mouthful, really.

Once upon a time, there was a device out called
the "Poor Man's Spectrum Analyzer" that cost
around $400 and you supplied the scope. Sounds
like this is more where you need to head.

"Odd Inge Hansen" <oinhanse@online.no> wrote:

> Are there any mods for the gaps on my pro-62 scanner.
> Are also interested in expanding the memory.

A 1994 USA law outlaws the importation and sale of
scanners that can be modified for cellular. So
that "gap" is not recoverable for any scanners
destined for sale in the US. Other countries have
"gaps" of their own that probably are not recoverable.

Dozens of other mods are possible, including
extended memory up to 12,800 channels (or more).
The memory mod isn't something that can be
explained in any detail in a newsgroup post,
though.

In a word, the PRO-62 uses a 2k x 8 SRAM. Replace
it with a 32k x 8 SRAM for 3,200 channels or a
128k x 8 SRAM for 12,800 channels. Replacement
isn't all that simple since there will be some
trace cuts to be made and a fair amount of rewiring,
including four switches for 3200 channels and six
switches for 12,800 channels.

The memory mods are highly detailed in other
publications, however.

Repair your own test equipment

I am in the process of adding a card exchange service to my current instrument repair business. I have a growing stock of clean, calibrated cards/boards and power supplies. All items are "burned-in" for a minimum of 72 hours prior to selling. I am working on adding a price list to me web site.

If you have a bad card/board, power supply, etc., I will sell you one -at a good price- if you send me the old one in exchange (a core).

I am also buying some non-working models.

Drop me a line and I will see if I have your card in stock.

Thanx !!

I have several computer systems I would like to trade for any of the above scanners.
This is for a high school electronics program, and I am using my extra computer equipment to make a trade for one or more of these radios.

What I have:

2 ea. Pentium 100 overdrive systems
1 ea IBM PS/2 Model 70 Desktop System
1 ea IBM Ps/2 Model 70 Portable w/ Gas plasma Display

These systems are configured in different combinations so if you are interested email me and I will go into detail and specifics.

I also have numerous parts and accessories for IBM PC's and XT's. Including many complete units, Lots of IBM monitors and add in cards.

If there is something you need, and you have radio equipment that we can use in our club to trade, please email me with your need. I would like to trade as opposed to selling outright.

Thanks,

Keith

Not bad - if carefully designed. Several of the larger counties out here (darn near state-size 8*) have massive trunked systems, so it *can* be done. Stability aside, there's the issue of just making things too damn complicated. When a surveillance crosses sectors, the lead calls out to change to, say 'East Sector, Local Tac 5', and everyone spends 5 minutes dialing through the talk-groups until they find something that looks more or less like the group called out... That could be fixed by simply giving each talk group a serial ID - Tac 1, Tac 2, etc... but the system was sold, in part on it's 'user friendly' display 8*)

Capacity is also real important - if you're going to put all your eggs in one basket, PD, FD, EMS, ADMIN, NG, PW, you've gotta make real sure there's enough capacity to meet all their simultaneous needs in the event of something major - say, if the New Madrid goes in a big way (hey - I live in Earthquake country 8*)

For the money - I think I'd pick, say a 6 or 12 MHz chunk of spectrum, reserve it statewide for public safety and then allocate a portion of the band for low-level repeaters, a portion for networked statewide links, guard-channels for interagency access/call-ups, maybe simplex tacs on splinters, etc. You'd have just as much (probably more) versatility as a trunked system with a **much** smaller maint. bill - and it'd be reliable.

Hello..

I am wondering if anyone has set up a set of channels for cruising down the New York State Thruway...

I don't travel downstate (Albany to NYC) all that often, so i never get to see what freqs (that I hastily punched in just before the trip) are working and which aren't.
I am mostly interested in Thruway-only frequencies (maintenance and Police).

So, what frequencies do YOU listen to when you speed, er I mean, travel at a safe rate of speed down I-87?

Please respond to:

Spoof@

If memory serves me right, i think most if not all P.A systems are
hardwired, and not wireless. You might be mistaken with wireless mikes,
like for churches and stuff.

:
: I THINK THAT THEY HAVE A LINK TO THE SITE THAT YOU WANT.

Its not on www.policescanner.com

If someone wants to listen to D/FW ATC, they need to go to the Audio Net page, which has an index for all of the broadcasts on the internet in the realaudio format, there is a Link to the D/FW ATC from there...

the url is http://www.audionet.com

The link should be right next to the one for www.policescanner.com as well.

Orange County's new 800MHz. system is a Motorola SmartNetII digitial trunked system. Astro Sabers and STX-3000's will be the portables and Astro Spectras will be the mobiles. The system is very 'cellular' in design and no radio will need more that 7 watts RF output to make it. A lot of the backbone equipment is installed and powered up at various radio sites in the County now (Made useless however by the absence of antennas and site/system controllers).
The first agency to cut over will be Irvine PD (if the plans don't change again) and that will be possibly as late as mid-1999.
Patches will be set up between the current systems and the new system until everybody is cut over. This could take 2 years after the first agency moves.

I believe you that you paid 199.00 for the scanner. I checked as well and found that Radio Shack does not always drop the price on there clearence items every where at the same time like there sales run. I also found out that a dealer/Franchise store does not have to lower the price even though they may get a credit for the price difference, I bought a pro 29 three weeks ago for 129.00. that price of course was before my employee iscount(I work for Radio Shack). To answer you question on the mod. I have looked everywhere and did not find any. If you find any I would greatly appreiciat that info.

Thanks, Ryan

PS That last message was in no way ment to get you heated. I just didn't want to see you pay more than what you should of. Sometimes the computers dont always get the price updates and that is what I thought had happened to you. But now that I checked I know that it is possible to have some items priced differently at some Radio Shacks. However the mojority of prices arew universal. That scanner is still a great buy at that price!

Don't forget that I live in Hawaii - we have the world's most beautiful women on our beaches. (One of them is my very pretty Vietnamese girl-friend.) But just as you must respect their privacy after they leave the beach by not peering in their homes, you shouldn't be eavesdropping on their wireless phone calls.

They use the NJSP trunked radio system and also have 2 conventional
repeater channels as secondary/spares. Check my South Jersey Scanner
Page at http://www.erols.com/jcardani/sjscan.htm

I have the NJSP documented for the entire state of NJ.

To follow the conversations, you would need a trunking capable scanner
such as the Uniden Trunk Tracker.

WHAT is a conversation I'm not supposed to be hearing? Military traffic?
Guess what? No illegal to listen to. Portable non-cell phones? No
illegal to listen to. The only thing that is illegal to listen to is
cell phones because the cell phone industry subverted the people of this
country's rights.

You are a loon. Wired lines are private property. Wiretaping without
legal court order is and should be a crime. Only a fool has an
expectation of privacy when he uses his cell phone.

When you peek in your neighbours' windows, I think you are trying to see
them naked. It's going to be hard to see someone naked listening to them
on a cell phone.

>
> You can attempt to justify your obsession of electronic "peeping tom"
I don't even own a scanner capable of listening in to cell phones. I,
however, own three cell phones and average more than 2000 minutes per
month. You could try attacking me for being an electronic exhibitionist
but that won't work either since I choose to retain my privacy by using
digitally encrypted cell phones where possible.

> but it doesn't change the fact that you're committing a federal crime.
This is only the case with cell phones. If I were to listen to your
portable phone, I would be well within my rights. If you don't want
people to listen in, I think you should keep your RF out of their
private property.

> It's just a pity that we need such a federal law in place of what
> should be a moral obligation to respect the privacy of your neighbors.
>
It doesn't work so it is faux privacy but even if it did, as you can see
there are solutions such as digital encryption. Otherwise, just don't
say things on air that you don't want people to know. I don't say things
online here I don't want people to know. It's really rather simple. Or
do you have something all fired important to hide? Are you a criminal?

> If you want the EPCA repealed, then you should also fight for allowing

I agree with Al. I've had my Diamond discone in my attic for years now
and it works fine with very little, if any added signal loss.

I would add, however a small caveat here: Many homes in the east and
midwest have metal siding or metal roofs. This would affect the signal
strength of an antenna mounted in the attic.

Have you read the sections of The Criminal Code of Canada, and the Radio-
Telecommunications Act that Mr. Stark cites? They do cloud this issue.
These sections do very clearly state that monitoring any form of telephone
conversations as being illegal. The statutes covers all forms of "private
telephone" (including radio-telephone, which would include cell phones) by
any type of device. So owning an unblocked scanner is legal, but using it
would be a Criminal Code Offence (in USA terms, a felony).

The Electronics Communications Privacy Act (1986) made monitoring cell
illegal, The April 1994 Ammendments added cordless phones, plus made it
illegal to sell (or manufaturer) scanners that could be un-blocked. The
new Bill that just passed in Congress adds even more restrictions such
as owning devices that can monitor these frequencies. There is even a
more restrictive bill proposed that covers most of the radio spectrum...

And last time I looked, Army tanks and Air Force airplanes are "public
property" also....so does that mean you can just go "borrow" one when ever you
feel like it?

I agree with the idea of encryption...that's why I've got a digital cell
phone, not an analog one. But, that doesn't change the concept that just
because something is there...that it's yours to use (or listen to) at will.

say brah...wassamaddau

dis malo idea yours get plenny
stink-talk no

national security is the excuse brah.
always a committee of well-trained
paranoina=laded minds to trump up
"security" kine...

government afraid it being found out...
and then press gets hold of it and
then they get voted out...wiki wiki

look at Lindsey case...dat broad
has her own "security" needs: not to
get found out...she get found out...
but continues her "dictatorial ways"/

moah bettah u learn "freedom" is
being allowed expressing what comes
to mind...no one has to be arrested
for being with thought...no matter
how many people in power get known
for what they do...at taxpayer's
expense.

I guess u say that paying 1.66 per
gallon a national security issue
brah in da kine...gas companies
refuse to "speak" about it...why
is never discussed fully. Their
national security...

taking lands away from da kine
up Leeward side because of State
Security excuse: they had no toilet
facilities on their encampment...
homesteaders...local kine.

national security usurps freedom.
on all levels...it's
how tyrants stay in powah...

bill conduit

From the beginning of radio until Congress got mixed up with cell phones,
it was perfectly legal for everyone in the US to listen to any radio
signal they wanted. The military expects adversaries to be able to listen
to their radio transmissions. They either use radio silence or some means
to make it difficult for a listener to understand what is being said.

What Congress should have done was require cell phones to have some
type of scrambler circuit. In the massive quanties in which cell phones
are manufactured, a custom IC would only add a buck to the price of each
phone. But a buck per phone is a lot of money, so the cell phone lobby
went to Congress to outlaw listeners.

Privacy on analog cell phones is rather like having a picture window
with no curtains in the bedroom!

I don't own a scanner, but I think everyone who does or who considers owning
one was delt a great disservice. As was anyone who was fooled into believing
the anti-scanner law would give them privacy.

Disclaimer:
These are my personal opinions.

Yes, I stand corrected. I called the day after I made that post to
see for myself, and was told it was discontinued. The reason I didn't
think so was because the man who sold it to me said he didn't know why
it was on sale for so little because they weren't discontinued. But,
I really did just buy it for $199.00, and at a Radio shack store.
I'll scan the receipt if proof be needed.

This angers me. Not so much because I want to eavesdrop, but I don't like such government intrusion. I hardly doubt radio enthusiasts have the lobbying power to prevent almost any law from passing. Also, I know nothing about ham, but don't most ham radios have such full coverage now, or do they only receive in their respective bands?

Okay, I'll try one more time with my senators... this is the letter,
translated from TeX. Yes, it rambles, but I want to get this thing
out as soon as possible! Comments are welcome, though.

=====
The Hon. Ben Nighthorse Campbell
380 Russell Senate Office Bldg.
United States Senate
Washington, DC 20510-0605

Dear Senator Campbell:

I am writing to you to voice my opposition to H. R. 2369 RFS, titled
"The Wireless Privacy Enhancement Act of 1998" which recently passed in
the House and was referred to the Senate Commerce Committee.

While the intent of this Bill -- to protect privacy of cellular and
cordless telephone users -- is good, it is deeply flawed:

o This Bill doesn't actually add any protection above that already
provided in existing laws. [1]

o The Bill provides the illusion of privacy instead of real privacy.

o The Bill "inverts" the Communications Act of 1934 -- Currently,
the radio spectrum is treated as public but still recognizes that
privacy must be respected. If this Bill becomes law, the radio
spectrum will be considered off-limits except for a short list of
exceptions; a unique situation among Western democracies.

As a member of the Electronic Frontier Foundation, I have a strong interest
in privacy -- *real* privacy as provided by voice and data encryption.
As an Amateur Radio license holder, I'm deeply concerned about the
misconceptions many people have about cordless and cellular
radio-telephones. As a scanner enthusiast I'm offended at being dismissed
out-of-hand as an "electronic stalker." [2]

The "electronic stalkers" in Colorado are paramedics, police officers,
EMTs, professionals, shut-ins, and Amateur Radio Emergency Service
volunteers. Some of these "electronic stalkers" helped set up emergency
shelters during the October Blizzard, drove food and water trucks to Alma
for the Salvation Army, and provided emergency communications for the Red
Cross during the Fort Collins flooding. [3]

Outlawing scanners will not stop a determined, motivated criminal. Anyone
with an old television or VCR can hear cell phone conversations. [4]

Adding components to a child's walkie--talkie can be used to monitor cordless telephones. [5] Someone with more knowledge of radio can build these interceptors from scratch. *Even cellular phones themselves can be switched into a diagnostic mode to monitor other phones!* [6]

This is the nature of radio. No law can change it.

What *would* change this, however, is allowing -- and encouraging -- real digital encryption in the United States; the same kind of encryption which is commonplace in Europe and is used on cell phones in Canada. [7] Legalizing this common knowledge will not constitute a threat to the U. S. national interests. It will, however, guarantee a cell phone user's privacy and make illegal cell phone cloning impossible.

No one disputes the need for privacy for individuals using cell phones. As a cell phone user, I don't want to be monitored, either. But "shotgunning" the Communications Act to no tangible gain will only add the illusion of privacy. How many people will have their credit card numbers stolen, or homes "cased" before a real solution is in place? How many government officials will have sensitive conversations intercepted by "unfriendly" embassies before encryption is mandated for cellular phones?

I ask that you not be swayed by the Cellular Telephone Industry Association and other interests in this: Banning radio reception will not solve this problem; strong encryption is an excellent solution.

Sincerely,

Eric F. Richards

Hello.

I am in need of Motorola Mintor pager, or similar type of pager that can be used for monitoring a local fire department here in the Twin Cities. I would need it setup for 154.070.
Can anyone make any suggestions as to where to locate such a pager as well as getting it programmed/crystallized for the above frequency?

Note: PL or paging tone aspect would not be needed. I am just looking for a simple and convenient way to monitor this particular frequency.

Thanks very much!

emw28@aol.com

Rick,

Not true. I just purchased 2 Watson antennas (Supergainer and
Airgainer) from a company up in Silicon Valley. See the following URL:
http://www.best.com/~scanner/

I've found the owner extremely helpful in any question I've asked.

>
I'm don't think that a "verbatim" interpretation of the that FAR is totally accurate. Notebook computers, walkman's, and the like all certainly qualify as portable electronic devices. The caveat to this FAR is "approved portable electronics". Having just returned today from a business trip, the flight attendants briefing is still quite clear. They tell you that you can only use approved portable electronic devices above 10K feet. Of course the "non-descript" use of "approved" leaves a lot to the imagination. One interpretaion could be that, since they only specifically mention cell phones as not being approved for use, that anything else could be considered approved.....

Unfortunately, Uncle Sam and the new media don't know the difference, though.
They routinely confuse Amateur radio with scanners. While listening to the
gossip and drug dealers often are boring, the police, fire, EMS, and
buisnesses are always interesting. I often bring a handheld scanner with me
to sporting events or other places so I can know what's really occuring when
fights and crowd control problems break out.
> Hopefully, you can join us some day!
I have a license, but I personally find my hobby more rewarding.

Orion makes blue books that list prices for electronics. Scaners are listed in the car stereo gook i beleive the books are expensive and prices on older units are very low but they are about the only one out there.Before you spend the money on one stop by a pawn shop and see if they use Orion and take a look at one to see if it is what you want.

I have ONE European CPU for the 2035/42 left from Jav. in the
UK for sale. If you are VERY HANDY with an iron this is the piece.
It will open up the entire 800mhz band and you will have a new freq range.
It wil also upgrade a 2035 to a 2042 and will have all the bells and
whistles that The Shack (RHANT RHANT) forgot to, OR were
TOO stupid to include in the 2035.

If someone next door is standing in front of an open window naked as a jaybird, they have given up their right to privacy. If someone makes a phone call which emits radio waves which pass through my house, my property, and my body, then the person making the phone call has also given up their right to privacy. If someone is burglarizing my house, I have the right (in my city, state) to shoot him so long as it is in the front side of their body. Soon I may shoot them in the back too if they are fleeing (legislation pending in TN). I should have the right to do whatever I want to the radio waves because they are trespassing on MY property and in MY body. The government does not own my property or myself. The day they try is the day of the beginning of the next Civil War as far as I am concerned.

The law is an infringement on the citizens of the United States rights.
It doesn't even apply to anything but cell phones even though much more
traffic goes through portable phones.

>Something else you don't know, eh? It is unlawful to
>intercept cell phone transmissions

Hmmm. Looks like you can't read. The above statement includes two
distinct parts:

1) it isn't even illegal to receive and monitor those frequencies...

2) it is illegal to monitor or receive cellular transmission on those
frequencies.

What part of the above, Marc, don't you understand?

>>Unless Tauzin's bill has passed the Senate and been signed into law, I
>>do believe that the only rules in effect for modifying a scanner in such
>>a way, is if the primary intended use of the scanner is to receive cellular
>>signals.
>
>It isn't illegal to possess the equipment, it is illegal to
>sell, or use equipment that is capable of hearing the cell
>freqs.

Wrong. Read the law. It is not illegal to sell or use equipment
which is capable of of hearing cellular freqs. It isn't illegal
to sell or use equipment which is capable of hearing cellular calls.
It isn't even illegal to manufacture equipment capable of receiving
cellular frequencies or calls, UNLESS that equipment is capable of
scanning four or more frequencies.

Now, if the primary intended purpose of the equipment is to monitor
cellular calls, and you don't intend to use it on other frequencies
as well, then it just might be illegal.

Let me just point out to the other folks, that Marc is a bit pissed at
me because he made a claim as to what the law was in some instance, but
wouldn't back up his claim with a citation. He claimed that it was
the duty of the people claiming there was no such law, to prove him
wrong... So Marc, I suppose you want me to prove that there is no
such law making it illegal to use a scanner capable of receiving
cellular frequencies? Prove it yourself.

FAR 91.21 does. It states and I'm para-phrasing; "No person may
operate, nor may any operator or pilot in command allow the operation
of , any portable electronic device on ;
1) Air Carrier or Commercially Certificated Flights
2) Any aircraft operated under Instrument Flight Rules

Although it doesn't mention scanners per se, they are portable and
they are electronic, so the regulation does apply.

>Thanks a million, gang --Chris

The only thing I can think of (and this is probably only a small part
of the problem) is to reset the microprocessor.

This isn't for the non-tehnical type, as it requires soldering on a
surface-mount PC board in order to install, then remove, a jumper.
the radio will need to be disassembled as well. The instructions for
reloading the operating system and resetting the processor might be
found on the Javiation home page (in the UK).

I had an AOR AR1000XLT that was acting up with a variety of problems.
I reset the processor and reloaded the limits and it all came back
100%. This isn't to say this will fix yours, but it couldn't hurt and
is probably worth the try!

You will have to be careful, though, The Euopean models are different
than the US ones in some circumstances. When I reset my AR1000XLT, it
wouldn't work by entering the data listed for the AR1000, but by using
the AR2000 data it worked fine.

Best of luck...

Steve

Hi,I am wondering if anyone out there has any info on the "RD-LAP" mdt protocol?

It is a moto. wireless data protocol used for mdt transmissions.
This RD-LAP protocol can be used on the same terminal type as the more known MDC 4800 protocol.
The terminal is a MDC9100 series and supports the following transmission types:
MDC4800
RD-LAP 9.6
RD-LAP 19.2

In what band of frequencies is the RD-LAP protocol usually used? 400MHz,800MHz, both??
Is it an encrypted protocol or is it like the fun and easy MDC4800 protocol we a ll know ??

thanks!

I checked the web, and found contradictory answers. Is it illegal to listen to any oral transmission or only cell/cordless phones? Why are cell freqs blocked, but not cordless? Is it illegal to own one that has cell capabilities, or just using it to do so? If it's illegal to sell cell capable radios and or show people how to modify theirs, isn't 80 percent of those of us on this news group criminals? I tried reading the fcc page, but it made it sound as if all scanning was illegal.

Thanks to those who replied...
It turns out that the frequencies for the NYSP up and down the thruway flip
back and forth from 453.425 and 453.525
Anyone know the PL's, splits on these frequencies?

Also- what about the more mundane agencies (like the Thruway authority)?

Thanks

I want to take this time to post a message about this company.

I had a problem with my software that I purchased about two years ago, it quit working. I called my friend, we all have one the computer gu-ru, to ask him for help. I also posted a note here in the newsgroups asking for assistance, with no result.

I called the company and talked to a gentelman, I forget his name, for awhile, which I have to say is alot more time than any company has ever spent with me on a brand new product that I have purchased and had a problem with. He was very helpfull and took the time to go down the list of all the possible causes of my trouble in a nice professional maner and eventually arived at the source of my problem.

I want to thank him, sorry I have forgotten your name, but I know he reads these pages because he remembered my post, he went beyond being nice to assist me, a person that he knew nothing about and had a two year old product, and solved my problem.

I think we need more companies like this one, and more people like the service person I talked to. I am now planning on upgradeing to a new product from them, and I am shure that I will get what I pay for with this company, and more.

Thank you PerCon keep up the good work!!

I think that a lot of you are missing the big picture. That is the fact that you're expecting privacy from something that isn't at all that private. After all, a cell phone is a radio. The radio waves are transmited in all different directions. Anyone can pick them up with the proper equipment. Yet, we expect the government to pass laws to ensure our privacy instead of going under the assumption that others may be listening in on our transmissions. It's completely different from someone spying on you in your home.

I remember stories of hams that were burglarized because they announced their vacation plans over the local repeater. Caution was not used in what they discussed. Is it so hard to use caution in cell phone conversations? Do we really *need* this law? Have we come to expect too much from modern technology and thrown common sense out the window, and thus expect the government to take the place of our lack thereof?

From: someone@where.com
Message-ID: <350f7a49.2000441@nntp.ix.netcom.com>
Source record: 166731

I am looking or some infomation on the RS232C port. I recently bought
a Uniden BC 895 XLTscanner and have found several software programs
for it's control but I don't know anything about the hook up.

1) Is the cable something I can pick up at radio shack or a computer
store, or is it a special item?
2) Is the connection on the computer end serial port or parallel port?
3) Any and all other info anyone can give me on this subject would be
welcome.

Thanks in advance for the help.

It was scarey tapping the Discriminator. First thing I did was to grind my soldering iron tip to a finer tip. Smallest wire I could find to connect to the Discriminator. I placed wet paper towel on the chip to keep it cool. I had problems soldering to the tab on the pc board, which is connected directly to the pin I wanted. I ended up soldering to the pin directly. VERY QUICKLY. Good Luck with yours mine works.

There are several good summaries of the state of current U.S. law online. You can start with the NF2G Scannist Pages at www.ggw.org and follow the United States Nationwide link.

Over the years, ham operators have learned that, when there is a question as to the interpretation of a rule or regulation, you DO NOT ask the FCC.

Actually, those frequencies, and the Troopers that patrol the Thruway,
ARE the Thruway Authority.

For more details (including PL), see the NF2G Scannist Pages New York
Statewide section.

>I checked the web, and found contradictory answers. Is it illegal to
>listen to any oral transmission or only cell/cordless phones?

It is basically illegal to monitor any electronic communication except for those authorized by the Chapter 119 exemptions. Fortunately, those exemptions include all government (except scrambled), aviation, marine and most of the other things scannists and SWLs like to monitor.

> Why are cell freqs blocked, but not cordless?

Cell freqs are grouped together. Cordless freqs. are interspersed among freqs used by other services.

> Is it illegal to own one that has cell capabilities

No

>, or just using it to do so?

Yes

> If it's illegal to sell cell capable radios and or show people how to modify theirs, aren't t 80 percent of those of us on this news group criminals?
>
It is currently illegal to sell NEW cellular capable radios, and you'll always be able to show or tell someone how to do the mods.
However, if HR2369 passes the Senate and becomes law it will be illegal to sell any cellular capable scanner, even one 10 years old, although possession will still be legal (makes no sense to me). It will also be clearly illegal to modify even your own scanner to receive either cellular or PCS frequencies.

Please could some one tell me what you need to receive SSTV in the U.K.
I
have just been watching a very interesting tv programme.

Can normal
satellite tv equipment be modifided to receive SSTV?

Please E-Mail me at
cmpress@bigfoot.com

Many thanks

Colin

Which of our Founding Fathers said: "Those who value security over
freedom deserve neither"?

Have you ever read "1984"?

Have you been reading the newspapers lately about the secret spying
groups in Mississippi?

I guess you would have felt right at home in East Germany during the
heyday of the Stasi wouldn't you?

I guess you don't mind filling a cup whenever your employer or a Fed
might tell you to eh?

Of course, I assume you don't really believe what you said and was
just trolling right?

2222. F.S.: Radio Shack Pro 39 scanner $175.00

For Sale: Radio Shack Pro 39 scanner

The usual VHF/UHF coverage, but includes full 800 mHz cellular coverage
(in correct increments, unlike most unblocked scanners)

200 channels plus programable band scan

Uses standard nikads or alkalines, can recharge nicads in the radio.

easily a 9 on a scale of 1 to 10 always kept in a case.

Includes case, manual, antenna, a.c. adapter. Believe I have the
original box.

$175.00 plus ups.

Thanks,

David, WA7ZYQ

Hi Scan Man:

My only suggestion is to wire an external speaker to boost that audio.
I have 2 Bearcats and when that little signal is amplified, the sound
is unbelievable. You forget you have a small handheld next to you.

Good Luck and happy scanning,
Bill

Excellent post! But with the new Bill that passed Congress, you can add
It WILL be illegal to own a device capable of recieving cell, cordless, PCS
and other forms of "private" electronic communications...

I said WILL as the Bill passed in Congress, but not in the Senate YET!!!

Only if you are stupid enough to announce that you are monitoring cell phones. The couple in Florida were charged because they taped Newt on his cell phone and sold the tape to the news media. If you quietly use a scanner and monitor cell phone, don't go around blabbing about it...

If you have police frequencies plugged into your scanner, and you are doing something that attracts the police officer's attention, you may be delayed (some areas do have restrictions on the mobile use of scanners) For example you get stopped for a routine traffic stop, late at night they may wonder why you are monitoring the police, they may assume you are prowling... If you aren't doing anything wrong, they still may take a bit longer, they may run your plates, DL, name through NCIC and CNI just to find out who you are and what you are up to. Again it's a case of ATTRACTING ATTENTION TO YOURSELF! If you get stopped, turn off the scanner so the officer doesn't hear it. If they ask tell them it's a ham radio..

In article <6eehb0$haj@news.Hawaii.Edu> jeffreyh@Hawaii.Edu (Jeffrey Herman) writes:

>Wire-tapping someone's telephone has been illegal for quite a long
>time. Now ask yourself how listening to a phone conversation
>via a scanner is different from wire-tapping that party's phone.
>Your intent is the same - to spy on your neighbor.

The intent is not quite the same.

One method is intrusive, the other is not (or actually intrusive in another way).

In the case of wiretapping -- I have to have physical access to the wire. If the wire does not cross my property, I would have to tresspass in order to apply the tap.

Also, conversation along a wire isn't broadcast, it travels along the wire to the destination. Wiretapping requires I physically attach equipment to physical objects that I normally do not have access to.

In the case of listening to a broadcast conversation -- in this case the radio waves are crossing through space I control.

It is similar to the difference between tresspassing into your neighbor's yard in order to put your ear against the window in order to hear a whispered conversation -- in which the participants have a reasonable expectation the conversation will not be overheard, and sitting in your living room with the window open listening to a shouting match in your neighbor's house.

Yes, you could close your window and not listen, but you are under no obligation not to listen -- whereas you ARE under an obligation not to tresspass and listen to a whispered conversation in which you must take extraordinary actions to overhear.

In the case being discussed, the person was listening to a legal police scanner, and the radio waves impinged on the scanner and were reproduced. If you don't want conversations overheard -- either don't broadcast them, or use a technology that scrambles and encodes the broadcast so that only the intended recipient(s) can decode it.

Granted but this right to listen if I choose was granted to the public
right at the start of radio as part of the conditions for private
for-profit usage of our airwaves. It is, for example, legal to listen to
military communications.

> Now now; try to reply in an intellectual manner.

How can you respond to silliness that would claim that illegal wiretaps
are the same as listening to radio? 'As long as I don't repeat it' is
one of the rules set forth allowing us to listen to our airwaves and is
fair.

>
> >Wired lines are private property. Wiretaping without
> >legal court order is and should be a crime. Only a fool has an
> >expectation of privacy when he uses his cell phone.
>
> Taps can be done off of a person's property.
>
Wired lines are private property. What are you claiming? That from your
property you can connect to other phone lines other than your own? What
are you, a phone phreak?

> Followups directed to the two scanner NGs.
This group added back in since I'm not going to groups I don't read for
this.

This right was moved from the government to the people when the
government asked the people to allow it to regulate and sell access to
their airwaves. This law is theft of a right of the people and is wrong.
I couldn't care less about personally listening to cellophane
conversations. I don't own a scanner that can pick them up. I own three
cell phones and talk for about 2000 minutes per month, so I'd be the one
being listened to.

Is ther anybody out there!!!! who can help me to expand the Frequncy-coverage on an Icom IC-H16T , with the MRH 4.4b software.
I have heard that you can expand the freq.coverage , to over 250MHz , and that it is in the "dealer mode" that you do it.

I have the access-code for the "software" but i don't know what adr. I do have to change , to get a wider freq.area.

I have also heard that I can get AM-mod. on the air-band (110-136 MHz), also by changing some adr. in "dealer-mode" , so if somebody knows how to do this , I would be very happy if You could send me an e-mail with instructions how to do this . Or give me an e-mail adr. so I can contact you . Forever yours : kdalsboe@online.no
THANK YOU !

> First Name John
> Version 2.1

They don't want to (change) human nature they want to (control) human nature.

You see, in a socialist raychem there are some things you must get rid of

God, (any thing that would assume that Mr. Clintion is not.)

Guns, (any thing that could over through Mr. Clintion or used in defence againsted the socialist revolution. / Peasants are
not allowed to have these they are children. People like MR. Clintion are of the highly evolved socially elite and are better
than you. If (you) were allowed to have guns you would just shoot each other and all be dead.)

any method of communication which cannot be monitored by the government, (Peasants must be monitored at all times and anything
said out against the government that peasant must be interrogated, imprisoned and executed.

Scanners, (any thing that would expose that our public safety system is not perfect and the truth about crime in your area.)

excuse misspellings.

Hi all,

Sorry if this question has been asked to death, but there is to be an air show at Davis-Monthan AFB here in Tucson this weekend (3/21-3/22) and the Navy Blue Angels will be performing. I was wondering if anyone out there knew the air-to-air VHF frquencies the Blue Angels use.

E-mail responses to the address below are prefered because of the short timing. Thanks!!

Robert

>onto one, and you'll end in jail, hopefully for a long time.

"Muscleing" one's way onto a military base is often quite difficult, since they are usually surrounded by large quantities of chain link fences and barbed wire. Walking around on one can also get yourself killed quite quickly, should you happen to wander into a live-fire mortar range.

Of course, miltary bases don't happen to run right through my personal property, or my body for that matter, either.

>Taps can be done off of a person's property.

That's true, but it also requires you to have access to the physical telephone line. It also means you have to be able to readily identify the pair that the conversation is occuring on. Not an easy chore.

I find this interesting because a few years ago, Popular Communications had a story about a tape recording of a cell-phone conversation being used in court as evidence for the prosecution. Evidently, that judge thought that Canadian laws did not cover cell-phones.

>> So what?
>> It's still legal to OWN unblocked scanners in Canada ya indignant
blowhard.
>>
>Have you read the sections of The Criminal Code of Canada, and the Radio-
>Telecommunications Act that Mr. Stark cites?

Yes, thoroughly.

>They do cloud this issue.

No they don't.
It is quite clear that you may "own" an 800mz unblocked scanner.

>These sections do very clearly state that monitoring any form of telephone
>conversations as being illegal.

I never said they didn't.

>The statutes covers all forms of "private
>telephone" (including radio-telephone, which would include cell phones) by
>any type of device. So owning an unblocked scanner is legal, but using it
>would be a Criminal Code Offence (in USA terms, a felony).

So what, that DOES NOT mean you can't own them.
You can own 150 of them if you want to.
Mr.Stark claimed that Radio Shack understood the laws of Canada better than

most Canadians in this NG.
He is wrong.
He is a blowhard (at least on this issue he has quite an attitude,
therefore, I displayed my attitude)

Radio Shack is simply making a corporate decision to not sell unblocked
scanners in Canada.
Not based on any Canadian law, but because they want to curry favor with
Uncle Sam.
I, fortunately, do not have to listen to Uncle Sam in his new dictatorial
form.
Nor does any Canadian.
We have enough problems of our own without inheriting garbage regulations
from the States.
Soon you people won't even be able to listen to your local police.
They will all be in the 800 band.
And you will have assisted them in this.
Good luck to you down there.
The police state is fast approaching.

>feel like it?

This isn't any analogy at all. Public Property isn't the issue.
It is the reception of radio waves which are propogated everywhere.
I could care less about listening to cellular or cordless (both
are now illegal to listen to), but the ability to listen (or rather
the ability to prohibit reception) is in the service provider.
Unless one expects every scanner and many other
radios to be confiscated, the reception of cellular
and cordless is a given....regardless of any laws to the contrary.

>I agree with the idea of encryption...that's why I've got a digital cell
>phone, not an analog one. But, that doesn't change the concept that just
>because something is there...that it's yours to use (or listen to) at will.

Yet the concept you speak of does not change reality.

Can anybody tell me where i can find software on the net to install on
my pentium2 and work with me pro-2006. Any software include if you know
software that can decode flex pager.

I would like to expand me way to monitoring with a computer.
don`t forget any file.

2272. Any fix for the HORRIBLE bleed problem on MVT9000?

Newsgroup: rec.radio.scanner
Date: 1998-03-19 00:00:00 UTC
From: no.spam@for.me
Message-ID: <7904A7DBDC96BEB5.518A9ECF72FF4FC6.1BA8EAAC3BEA2F94@library-proxy.airnews.net>
Source record: 166604

Here's my problem: I cannot listen to *any* frequency without *heavy*
bleed-in from other frequencies. I've tried fiddling with *all* the
settings for over four hours just trying to pick up the local
repeater. If anybody else in the area is on packet radio, I hear the
repeater for a few seconds, then packet, then repeater, packet, etc at
about 10 second intervals.

It's horrible.

I can't pick up anything unless it's out in nowhere frequency-land.

Any suggestions?

2273. bc142xl mods- Know any?

Newsgroup: rec.radio.scanner

Ive never modified before and think I'll try first on an older bc142xl I've got laying around. Any mods would be appreciated. Ive heard that this little 10 channel can be modified to accept 16 channels. This modification- and any others- would be appreciated. Please post here. Thanx

BTW- I have scanned the web and havent found any mods for this lowly model.

From: mulligan@ACM.ORG
Message-ID: <6eq4c3$6be@HOPPER.ACM.ORG>
Source record: 166608

The questions keep coming up, different laws are mentioned, and most replies are of the form "I'll do anything I bloody well please and no law can stop me". The following is a short dissertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

Now, please - we all know the first two are: 1) stupid; 2) unenforceable; and 3) widely ignored. It is not really necessary to post the obvious to the whole world (unless you have an irresistable urge to demonstrate even

less sense than the legislators who enacted them).

>idea of the range of these things?
>
>John

The P110 is a Motorola programmable portable that if the P110 is the U.S.model
they are as follows:

VHF P110-Output 2watt(low power model)5watt(high power model)
136-162
146-174

UHF P110-Output 2watt(low power model)4watt(high power model)
403-433
438-470
465-495
490-520

P110 is part of the Motorola Radius line and this particular radio came
put 1991&1997-when it was discontinued forU.S. production except the export
models.

Used primarly by,security,construction,retail sales,production(movies
etc)

The way to tell the differnce between low power model to high power
model,vhf or uhf is for example:

Model no:P23QLCXXXXXXX

The 2-tells you it is a low power,and the 3 tells you it is a VHF model.
If the 2 was a 4,it would be high power.The 3 if it was a 4,it would be
UHF.

Model no is on the inside of the radio if you were to remove the battery of the
back of the radio,there will be a serial no plate.

In the meantime, to answer the original question. Get a Ramsey ss-70 kit and you'll be able to do what your asking. A word of caution though, don't ever let them know about it or find it, and don't advertise it to friends. Take it from someone who has been there, it WILL cost you alot more than the $39 for the kit if you do...

>have struck a nerve, eh?

I for one, am not obsessed with listening to my neighbors. I figure, what I listen to in
the privacy of my own home, is my own business. If they didn't want the cordless & cellular phones listened to, then they should not have had the technology available to invent the radio receivers to listen to them. the same can be said for those that invented the cordless & cell phones. Both of those communication devices are technically radio transmitters. I along with God knows how many other people have a hobby of listening to the types of transmissions that come over these radios. These radio waves are transmitted through the air, & they come through the walls of my home. I do NOT go out & get them. Therefore, I have every right to listen to what is received through the air into my home. There is NO sensible way to enforce this ridiculous law. If those on the cordless & cell phones aren't involved in any legal activity, then they shouldn't worry wether their conversations are heard or not. hte cordless & cell phones were invented for those that were too lazy to walk into the house, or walk to a payphone. Where were all these whiners when the FBI was busy monitoring what was supposed to be private conversations that involved Martin Luther King that were later found out later to have been done without a court order? Because the FBI does it, that makes it ok?
Just an Opinion. Thanks for the Time.

Source record: 166625

Sounds like you are describing intermodulation. The Yupi9000 is VERY SENSATIVE and picky about what antenna you use. I assume you are using an external? Try a smaller antenna with less gain.

I also bought a 6 dollar adjustable attenuator from Ratt Shack... works great on all frequencies. My antenna tuner works wonders too. I haven't had any real problems with intermod except a bit on 43-49Mhz. What frequencies are you having trouble with? If your problems are not fixed with a different antenna there may be something wrong with your unit.

>
> My question: Does anybody have any idea of the reason for using such an
> unusual data rate and choice of mark and space frequencies?

Rumor#1: So they are not easily reproducible by standard modems,
so the local prankster cannot trigger a false alert (although we
know that won't stop a determined "prankster").

Rumor#2: It's a compromise between bandwidth used and data rate.
Since the "alert" has to pass through multiple audio chains (some
not too good), it needs to be somewhat "robust", but it needs to
be fast enough not to take up too much time.

There is a an OES website for the California EAS system. There is
some good info there.

http://www.garlic.com/oes/eas.htm

There is some useful stuff at the bottom of this page:

http://www.thuneagle.com/same.html

The FCC has a page with PDF "manuals" for the broadcasters:

http://www.fcc.gov/cib/eas/

Hey Programmers! Is anybody working on software to decode the
EAS/SAME alerts? We're heading into Tornado Time. Here is a
chance to write something that may actually save lives!

Greetings,
I understand it is unlawful to listen or monitor cellular telephone calls, but just for information only. Wasn't there a mod for the BC890XLT to extend receive from 800 mhz to 900 mhz, open the gap? If so, is the BC895XLT very similar to the 890. Would a mod be similar?
Thanks in advance. 73, Stuart

Hamtronics Wide Band receiver pre-amp.

Bought to use with scanner at a customers office. Still not enough gain to to overcome all of the walls in the building. Works good, just one two many cement walls, and management says "keep antenna at your desk!"

Customer can't use it, so he needs to sell it. Only about two weeks old. Asking $50.00 shipped with pre-pay. C.O.D. at additional cost.

: Ive never modified before and think I'll try first on an older bc142xl I've
: got laying around. Any mods would be appreciated. Ive heard that this
: little 10 channel can be modified to accept 16 channels. This
: modification- and any others- would be appreciated. Please post here.
: Thanx

: BTW- I have scanned the web and havent found any mods for this lowly model.

It's probably similiar to my BC140, which i expanded from 10 to 16 channels.
Open it up and look to see if there is a diode over the the processor chip
If it uses the same processor as my 140, its the UC-1116 chip. If there is
a diode over it, clip one side, making sure you have some space to solder
it back together in case the clip has no effect. If it works you should
now have 16 channels. You can help me out as well. Does your scanner have
a priority and or instant weather button? I was able to mod my 140 to have
priority, but I am interested in hacking an instant weather button if possible
It is also possible to tap the discriminator and scan pins easily. This would
be an ok radio if it had more frequency coverage... Let us know how you make
out. Please email me with the specific factory feature of your radio so I can
try to hack up that instant weather button.. I'll post new mods to my web
page for all to share.

The best antenna for AR8000 (stationary) is DRESSLER ARA2000, or ,
if you have more space, a logperiodic CREATE + DRESSLER EWPA2000,
a low-noise amp.(50-2000MHz)

For mobile use I use a DIAMOND RH-790 (70-1500MHz) telescopic whip.

It's great!

I have the modified MVT9000 with the "bleed mod" from Banercom and I am not having any major intermod problems. But the bleed mod has to do with leakage of the IF inside the radio causing images on frequecies 11.7 Mhz higher.

What this guy is talking about is NOT "bleed" its intermodulation. You MUST use an appropriate antenna for the frequency you are listening to with this radio. A radio shack telescopic will out perform nearly ANY other for stuff above 43Mhz. If you try to use a 30 foot long wire for 155Mhz you are going to have problems... unless you use an antenna tuner...its the nature of the beast. For HF a 30 antenna will be fine with the Yupi. This is a powerful radio but also complicated... not for beginners.

If anyone has ever had the need for a "portable power pack" or
"emergency power supply", you can order the parts from:

ALL ELECTRONICS
Fax 818/781-2653 7 days/24 hours
818/904-0524 Customer Service and Information
800/826-5432 toll free
http://www.allcorp.com
allcorp@allcorp.com

The parts you will need are:
CAT# GC-6322
12V 3.2 Ah Battery
Rechargable sealed lead-acid battery pack WITH wall-wart charger.
Battery measures 9.25" X 2.55" X 1.27"
Weight = 2.9 lbs
Price = $15.00

CAT# CLP-29
Adaptor Cord for Battery Pack
Allows charging from automobile lighter socket and connection of other
devices via cigarette plug.
Price = $2.50
{This is a Y-adapter...the tail of the Y attaches to the battery, and
there is a male and female cigarette-type plug on the other end.}

This adapter will also work with CAT# GC-1223U, a USED 12V 2.3 Ah sealed
lead-acid battery, measuring 7.13" X 2.385" X 0.92" which costs $9.00.
The catalog does not say if a charging unit comes with this battery (I
did not order this one, just thought I'd mention it though).

Shipping is $5.00. I ordered mine Monday A.M. and received the shipment
via UPS Friday P.M. A free catalog comes with the order, filled with
all sorts of other useful, and inexpensive type electronic stuff.

If you have anything that will run off the cigarette lighter in your
car, this is a very nice setup, for mobility and/or emergency purposes.
It easily fits in a fanny pack. You can run your scanner, CB radio,
cellular phone, boombox, spotlight, laptop, etc. We have 4 similar type
items, from 31 Ah wheelchair battery, to 7 Ah, to 4 Ah, to this 3.2 Ah.
It is nice to take on trips...the kids can listen to their CD players
for extended times, without eating up a ka'zillion AA batteries, and I
can recharge my scanner. It is a good idea to have a 12V fluorescent
light and AM/FM radio around if the electricity goes out, as well as
your
scanner, CB, cellphone.

Just thought I would pass this on, for anyone who might be interested.
Not a bad setup for $22.50.

Doubtful that would happen, for my door is open whenever I'm at home
(it gets quite warm here in Hawaii). I'd give the authorities full
access to my home anytime they so desired entry.

What's ironic here is that if martial law were ever declared, it might
be *me* breaking down *your* door!

We'll have to wait & see. Phoenix's first plans were to have they system
in place by the end of 1997, but those plans were canceled. They city
wants to put Police, Fire, and all other city services (sanation dept,
water dept. etc.) on the system, one problem being is the PhxFD
dispatches several cities and fire districts on automatic aid. Should be
interesting to see how well Phx sells its idea to make all the current
VHF/UHF radios in the city obsolete.

Well I have taken my scanner to the airport to monitor the Air freq's
while waiting for an arriving flight. Nobody seemed to care that I was
listening to the tower, police, fire etc... I also kept the volume low,
and kept to myself. Being a bother to others at the airport and causing
a general disturbance might get you some trouble, but if you do it
right, they will just think you are listening to a normal FM radio :)

2325. BC235xlt & Pro 90 info...

Newsgroup: rec.radio.scanner
Date: 1998-03-20 00:00:00 UTC
From: Terry Biltmoir <twb12@sham.net>
Message-ID: <6eu0bn$8cu@bgtnsc02.worldnet.att.net>
Source record: 166448
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have both of these trunk trackers, and although they are supposedly identical in design, with only cosmetic differences, the Pro 90 has more "static" in it's receive than the Uniden model does. I used a ScanTenna on the roof with a spitter. The same signal (strength) reached both units at the same time...they sat side by side and I raised and lowered the volume of each one by one to compare received signals.

The 235 is consistently "quieter" as far as noise during receive - almost full quieting, (if you've used repeaters, you know what I mean...) where the Pro 90 always has a much higher static level with the reception - you can still hear the calls, but lots more static.

I returned my first unit to Radio Shack and exchanged it for another one. The new one was just as bad. I took the Uniden down to the store with me, and let them hear the difference themselves. While they could not come up with any explanations, all the units they had in stock (we tried 4 of them) were the same - much more noise in the receive than the Uniden. We tried switching rubber ducks, and using the store antenna on the roof.

If your thinking of buying a trunk tracker - you're still better off (besides the extra battery and charging cradle) in buying the Uniden.

Although no one seems to know why, there is a difference...

Don't give up yet! If you have the same processor as mine, there *must* be a
way to switch it to 16 channels. Try and figure out what pins the black wire
goes across on the processor using a meter.
You can try clipping that wire, and resoldering it back together if it doesn't
work. If you're uncomfortable cutting the wire let it go for now until we can
gather more info

@cts.com
Organization: COMMtronics Engineering / World Scanner Report
Newsgroups: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur,rec.radio.shortwave

Posted as a public service for information only. I do
not sell nor have available the WR-3000i..

WR-3000i-DSP Signal Conditioner

The Signal Conditioner is a standard digital signal processing "applet"
now supplied as part of the WiNRADiO WR-3000i-DSP receiver software.
This feature provides high performance post-demodulation audio
filtering, which is particularly useful when receiving AM, CW and SSB
signals.

To run this DSP applet, select the corresponding item in the
WR-3000i-DSP menu (ie. 'DSP | Start applet | Signal Conditioner').

The following controls are available:

1. Bandpass Filter enables the audio 'brick wall' band pass
filter. See '6' and '7' to tune the filter response in real time.

2. Noise Reduction enables adaptive random noise filtering. This option
works better for higher signal-to-noise ratios.

3. Auto Notch enables adaptive automatic heterodyne cancellation. The
Auto Notch eliminates multiple tones from the audio spectrum. This is
very useful to cancel 'carrier whistles' while receiving SSB-modulated
signals.

4. Marker Tone activates generation of audible tone with its frequency
equal to the center frequency of the pass band of the filter. This is a
useful guide for tunning-in on CW signals. The real-time FFT display
provides a complementary visual guide.

5. Gain sets the pre-processing numerical gain of the signal inside the
DSP. This parameter helps to resolve the 'signal-to-noise vs. audio
distortion' trade-off. If the filtered signal sounds too distorted,
choose a lower gain. The 'AGC' option activates an automatic gain
control algorithm. This function does not replace the main 'hardware'
AGC of the actual receiver, as it is applied only inside the DSP as an
automatic numerical amplification adjustment.

6. Low/High/Centre/Width parameters control the corresponding pass band
frequencies of the filter. The two pairs (Low/High and Centre/Width)
are synchronized, so that a change in one parameter is subsequently
reflected in the others. The entered numbers are rounded to 10Hz steps.

7. Interactive filter tuning control is one of the most impressive features of this facility. You can independently drag the lower and upper transition bands with the mouse. It is also possible to move the entire pass band ('tune' the filter), simply by dragging the 'top' (the upper horizontal part) of the displayed filter shape. As the filter shape is displayed above the real time FFT display using the same frequency scale, it is possible to tune the filter precisely to isolate interesting signal peaks buried in noise, using the real-time FFT spectrum.

8. Real-time FFT display shows the real-time spectrum of the audio signal. The vertical range of the display is 80dB. Frequency axis marks are displayed above this display.

9. FFT Source - selects whether the FFT is computed before or after filtering of the signal.

10. Bar toggles between displaying spectral envelope and spectral lines, while Grid enables the green rectangular grid on the FFT display.

11. Exit stops the Signal Conditioner applet and unloads the DSP, so that other task (a different applet or the Sound Recorder) can be executed. It is possible to stop the applet by selecting 'DSP | Stop applet' in the WR-3000i-DSP menu.

12. About displays the version info.

13. Settings are used to store and quickly retrieve different combinations of control parameters. To Store the current setting, type any desired name into the 'listbox' entry line and the click the 'Save' button. To recall pre-stored settings, simply select the proper name in the 'listbox'. To remove a selected item from the list box, click the 'Delete' button.

The band pass filter uses finite impulse response (FIR) design, so the phase delay response is inherently linear. This filter is also ideal for 'cleaning up' any data mode before outputting the signal to a third party decoder. To adjust the filter to any FSK modulated signal, set the lower cutoff frequency ('LOW') slightly below the lower tone and the higher cutoff frequency above the higher tone of the signal.

VE -Lindenhurst,LI March 22, 1998

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12:00 NOON....no reservations required. This is no VE
in the month of JUNE 1998.

Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring TOP buzzer for
entrance.

Location: Babylon Town Hall
Emergency Operations Center
200 East Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1998 Exam fee is $6.35, please bring exact change.
* Novice exams (elements 1A & 2) are free.

For addition information you may contact:
Michael Grant N2OX (516) 736-9126 or globalcm@erols.com

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5)

hi,one more thing the Discone on this page

http://www.northcountryradio.com/discfig2.htm

Is made for 700-2000MHz is it use full for freqs. under the 700 mark.
say around 100-150 and 400-450??

Please and thanks.

2340. Pro-32 Mods? ANY???

From: Bill Crocker <billc@rust.net>
Message-ID: <6eupedlqo1@news5.ispnews.com>
Source record: 166465

Mike:

I found the following freqs. listed for Lockheed, in Liverpool, NY;

156.025
156.075
156.240
156.300
156.375
156.525
156.625
156.725
156.875
and...
160.675

If their security is their own, then you'll probably find them in this list.
If it's an outside firm, then you would need their company name to track it
down.

Bill Crocker

My well-known and well published Extended Memory
mods will work in the PRO-32 to yield anywhere
from 3200 to 12,800 channels. The procedure isn't
something that lends itself to a text file where
you clip a diode and add a resistor. But it will
work in the PRO-32, that's for sure.

If I were you, I'd practice up on taking that
PRO-32 apart and putting it back together. It
ain't the easiest scanner in the world to work on.
And you will need to figure out where to stick
four to six switches of some sort.

I dunno John, it seemed rather obvious. You don't get "atta-boy" replies. Everyone (except your forged personas) has really rotten things to say about you John.

Face it, you're a pathetic and delusional little troll. You do have amusement value. "You're the "Otis" of Mayberry rec.radio.scanner. You're Damon Wayons as the "homeless guy"; filthy and three sheets to the wind, stumbling about with a mayonaise jar of shit and piss tucked under your arm; disgusting most, and amusing the rest with your delusional take on the world."

Often they will 'simulcast' both VHF & UHF. Try to get someone who is a pilot to look up the freqa for the airbase in the Airport Facility Directory, or the IFR supplement. Also, plane to plane comm is usually done on a discrete FM channel as opposed to the VHF/UHF AM Air to Air, Ground to Air etc. so that's a whole different ballgame. I don't imagine they give out those freqs willy nilly. However, they usually DO have a practice the day before or maybe 2 days before, on location, so you could go out to the area and do a search/scan. I imagine it would be pretty much line-of-sight reception. Good LUCK!

You can attach a cassette adapter, from the earphone or external speaker
jack, to play through a cassette player, if you have one. There is also
a mono to stereo adapter ($2) that is helpful, so you can hear it out of
all the speakers in your vehicle, not just one side.

I used to be a regular on here but got out of the habit many months ago when I grew tired of the Cheek-Mackey pablum. It seems I haven't missed much.

To chime in on "Who are 'Bill' and 'John'":

Bill is a self-righteous creep who is lucky to have the technical expertise he does, because sure as flies on shit he aint makin' it on personality. He's the kind of guy they had in mind when they invented the term "road rage". He's the kind of guy who arrives late at a party and then tells everyone he's late because he was busy performing the world's first brain transplant or similar heroic feat. The three words that describe him best are: "what a jag!" The reason he likes himself so much is because no one else does.

John, and I admit I am just speculating here, is a retired and/or unemployed old bastard with waayyy too much time on his hands. He's the kind of guy who waits on hold for half an hour for a phone company billing rep so he can get an eight cent refund on a wrong number call. He's the kind of guy who still broods because some schoolyard bully punched him out 50 years ago. He's the kind of guy that calls the police and demands they immidiately race over with lights a-blazin' when a car with a loud muffler comes down his street at 11 pm. Nothing is too petty or insignificant for John, and he never, ever lets anything go and gets on with his fruitless, meaningless, pointless, lifeless life.

I'll check back here again in about 4-6 months to see if there's anyone still on this NG besides Bill & John.

Later...

Yes, and INFACT the reason you were in his killfile originally was
because you would attack him on here if he said the word "boo".
You are an idiot MACKEY, but folks don't need to believe me to get
proof, all they need to do is read your posts.

Nope. Ericcson (GE) is not participating in APCO-25. We've had an APCO-25 CAI system up and running for about 8 months now and All of our users are extremely pleased. In defense of the 800 mHz trunked systems, whoever the manufacturer, most of the problems I've heard of have involved either a poor system design, or more than likely, the powers that be have cut back on the design in order to save money.

Cross-posted to: rec.radio.shortwave,rec.radio.swap,rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment

I have two (2) Sony Pro-80s for sale. They are both in excellent
cosmetic and electrical condition. Each comes with the original
manual, VHF adaptor, leather carrying case, battery holder, nicads,
and antenna. Would like to sell for $175 each + actual shipping cost.

For those unfamiliar with the Pro-80, here are some basics:

* Handheld battery operated unit
* 40 memories in any combination of sw/am/fm/vhf freqs.
* 3 scan modes.
* Am narrow/wide mode
* Fm narrow/wide mde
* Upper/Lower ssb mode with knob adjustment
* Fine tunning control
* Tone hi/low
* Squelch/auto squelch adjustment
* Frequency coverage from 150khz - 30 mhz
* Also covers 115.15 - 223.00 mhz with included VHF converter.

To complain about any irrelevent Usenet posts by Mackey, forward the
offending post & your complaint message to:

webmaster@parg.org
mscott@teleport.com

Most importantly, complain to abuse@sprintisp.com That's the
system that he posts most of his irrelevent material via, even though
he's set up his posts to show a couple different return mail addresses.

Prevention is better than cure.

NO not yet but you can bet somebody like the former Soviet Union in
need of cash very badly will be black marketing the suckers soon. The
russians are already selling tons of formerly top secret surveillance
stuff to whom ever wants it. Cameras that have no purpose but spying
are a nifty item you can pick up cheaply in the Russian federation
too!.

It's easy to put Mackey and all his derivatives
on a Shit List. Just filter anything and everything
from PARG.ORG, including his call sign and last name.

The name of that PARG outfit is, guess what?

Phantom Amateur Radio Group. And it is a den
infested with vermin, critters, and other denizens
of moist, dark, dank places.

Remember the old saying, "Birds of a feather flock
together"? Well, that's ol Smacksie and his PARG
gooooooood buddies. No harm in filtering anything
that comes out of that pustule of humanity........

Uniden Bearcat Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

Try 866.562 for the GSP and 867.762 for the turnpike if you do not have a trunk tracker. Even though it's a trunk system they seem to always come up on these same freqs.

Hi,

I'm trying to find the best freqs to monitor for Space Shuttle launches and would really like some advice on it. I'm going to be using an 800 MH scanner from the Bahamas.

>oh ya my store mgr and district mgr love me.......

Good for you ! Your store must have a lot more volume than mine, as you make more than our store manager. Maybe the original post was by someone who had an a$$ for a store manager or district manager.

I am happy to hear that you are doing so well, but I don't think that most people can do as well as that, especially in lower volume stores. By using the standard R/S commission formula of 6% of gross sales (no SPIFF's), to earn that $50,000 per year that you get, requires you to sell $16,000 a week, or $3,200 a day ! Hell, we don't even sell $3,200 in a week at times ! Now, if you are in a mall store or get lucky enough to sell a computer EVERY day I guess you are set. (Clculations based on working 5 days a week, 52 weeks a year

I think it was kind of unfair of you to infer that those who "can't cut it" have sour grapes, they just don't have a store that has the customer base yours does. Now, tell me, does everyone in your store do as well as you ? Does your store really have that much business ? I mean, you are selling over $800,000 worth of product alone ! That means, that if there is just one more guy like you, plus the store manager, that your store does over two million dollars a year in sales ! Your district manager SHOULD love you ! What store are you at, I want a transfer ! Wait, you are in Michigan, never mind, too cold, too much snow :-)

Good idea. Just sent off a few.

Problem is, when John gets canceled, he'll just find another account. Remember, he already did that with some northwest provider for a week or so to try and be anonymous and it blew up in his face.

Hey - if it stops him for a week or 2, it's worth it.

Thanks for the info MAlexder. I ordered a reprint of the article, but Far Circuits didnt' include it with my order... I'll have to email them or something. Of course I've taken a look at the web site. The picture that confuses <g> me most is on http://www.qsl.net/ka2pyj/article2.htm . It shows an opened 2032 scanner on its side with 15 wires conecting it to a naked Porgrammit interface. Surely that's not how John is currently using the scanner! I just want to get some good info before I start cutting holes in (hacking up) the back of my scanner.

Thanks,

Chris Stankevitz

Look, if you really want the best, the go to a commercial two-way radio shop and have them order a VHF-Lo band antenna specifically matched to 49MHz. It won't be the cheapest route, but it should be the best. You can also get a 102-inch metal whip for CB (27MHz) and cut it down to match the 49MHz range.

Discones are good antennas if you want to cover a wide range of frequencies, but they offer no "gain" or amplification of the signal. Groundplanes, on the other hand, increase the signal, but are good for only one frequency range, unless they use electronic traps or mulitiple elements to increase their coverage.

Hello! My name is Doug Quayle, and I've got a good buddy of mine on the U.S.S. John C. Stennis, our USN Aircraft Carrier presently floating in the Gulf, wishing he were wearing a GREEN uniform (hehehe).

Anyway, playing the waiting game over there can't be all that fun, so all of the friends and family of the Stennis Battle Group that are on the net have decided to boost the morale of the boys & girls next month. We'd appreciate your support as well.

We ask that you "snail" mail (i.e. via the disgruntled postal worker's union) a letter or a postcard to:

Any Sailor
U.S.S. John C. Stennis (CVN-74)
FPO AE 09542-2874

And mail this note ON APRIL 1st. The idea is to innundate the ship with mail over a 2-3 day period. Mail call to a sailor is usually a little more important than to those of us on dry land, so we figure it'll really make their day to hear some words of encouragement, support, or the latest Monica Lewinsky joke, from someone American.

Our goal is to get a letter to EVERY sailor, and the Stennis is a BIG ship, so we need help.

Thanks a bunch;

d.q.

You will be able to program them back very easily once you have
PROgramit installed :-)
>
> My question is this: How should I connect my Programmit circuit with the
> scanner? I purchased the etched board from Far Circuits. I suppose I
> could scotch-tape the board to the outside of the scanner and have 17
> wires going through a hole on the top of the scanner... but I want this
> project to be *different*! :-)

If you purchased the parallel PCB the project you can be made to look
like it belongs in the scanner if you carefully nibble a hole in the
rear panel for the DB25 connector. The two screws that hold the DB-25
are suffient to support the PCB inside the scanner. Be sure to keep
metal filings out of the PCB traces.

If you purchased the serial PCB you will need to find or make a
bracket(s) to mount the PCB to the rear panel. I cut and bent up a spare
PC blank panel for this. You might also find some nice brackets that can
be removed from a DB-25 connector. I recommend a panel mount RCA
connector for the data connection.

For either board, you could install four hex standoffs in the corners
and mount the board to the bottom or top half of the plastic case. You
could route the ribbon cable for the parallel connection between the
plastic case and metal chassis or out through a vent hole.

Let me know if I can help further. Good Luck

dude <lawdude678@worldnet.att.net> wrote:

: well- I clipped that lead and notta. No apparent differences. I tryed
: scanning and manually dialing channels and it still will only take 10.
: Suggestions?

are you sure everything still works? did you check the priority and instant weather buttons while the wire was cut? I guess we need specifics now about the boards... I'll start with mine, and compare with your 142.. lets start with the keypad wiring harness. the wiring harness for the keypad has nine wires, colored brown,red,orange,yellow,pink,blue,violet,white,black from left to right. the wiring harness for the display is 11 wires, colored brown,red, orange,yellow,pink,blue,violet,gray,white,black,and pink from left to right. Now for details around the processor. just to the left of the display connector there are two resistors, both 560 ohms, continuing left, there is a solder pad that is unlabeled with a circle on the point closer to the processor, and a line runnning south to the other point. The cathode end of the diode i clipped is in soldered in the point with the white circle around it. Continuing left, the next two componentes are diodes labelled D46 and D47 on the board, and they are both installed on my 140. Continuing left, there are two resistors bith 220 ohms, then a capactitor thats marked 472, and the black wire which is what I think you cut. I apologize to you at this point, because I did not remember this wire being here when I told you to cut it. You should re attach this wire, as its connected on my 140. If you follow this black wire to the other end, it attaches to the main board near diodes D37, D38, D39, and D40, which are all installed on my 140. Now, having told this, one or more of those diodes that I mentioned may or may not be installed in your 142. Uniden uses these diodes to add or delete functionality to the processor. There are also three more diodes you should compare... To the left of the keypad harness, there are three more diodes, D25, D26, and D27.

So, compare these diodes in your 142, and tell me which ones are not installed in yours. You might also find diodes that I haven't mentioned that you should report to me, labelled or not. If they aren't labelled, just give me their general location near some other component.

Well, that's a lot to chew on.. Have you figured out email yet? These messages are gettin kinda long to be transmitting all over usenet.

I have 275.350 as the Blue Angels freq.
They put on a show at the Schenectady Co. Airport every
three years or so and this freq. works every time.

I'm intersted it finally purchasing a base unit Trucktracker - everyone tells me to go BC over Radio Shack. That fine, but I've seen prices all over the place.

Can anyone tell me what the good going price is currently on the BC895XLT?

Any help would be most appreicated!

Thanx,

Jeff

If so deised private emails can be sent to: j.c.w.@ix.netcom.com

Hi JC.

I searched for about 3 weeks for a new scanner: PRO2042, BC895XLT or BC9000XLT. I finally decided on the 2042. However, I did find the cheapest new BC895XLT price of $275 from http://www.mallsurfer.com\shop\simplewonders . I found this site searching usenet archives.

Compared to most flavors of COAX, it is fairly dear, and it really
isn't very flexible, so it is hard to wind it up into a coil small
enough to ship easily. It is fairly difficult to get the radius belong
about 18 inches when you wind it up...

Message-ID: <01bd550f$45672560$8ba541ce@default>
Source record: 166320

Just to let you guys know, I was able to restore normal operation to a terribly scratchy volume potentiometer with a small droplet of WD-40. Just for safety, I took every precaution, flack jacket, goggles, heavy leather gloves, tongs, made sure the unit was unplugged, hell I even called the Fire Dept. and had them standby while I allowed a tiny drop of moisture dribble from the can into the little hole of the pot. It was a very tense moment!

The unit has been working for over a month without any explosions or fires.

I've now got some contact cleaner, but WD-40 works just fine in a pinch....So please shut the hell up about it....

Doesn't a half-wave dipole already have an impedence of 75ohms? Why would you
want to use a TV type (4:1) balun with this setup?

Eric, this is a tough one as I never REALLY found out anything concrete on them but I'll share with you what I do have. First, I believe Rice is on the Missouri city TRS, and I know the EMS is for sure (I had medic buddies that rode with them and tagged a few channel with the trusty RS freq counter.) If anything really serious happens, Bellaire PD / FD (460.175 and 460.600 pl 179.9?) will also have the info. Also listen to HPD Southwest on 460.050 (aka Beechnut) and car to car 460.225 for other comms between the agencies. All HPD radios use a 123.0 PL (except car to car). FYI, last time I checked about a year ago, 460.525 is an active uhf link to the harris county TRS. I have West University FD listed as 154.430 and 155.040, dispatch simulcast only. Oh, HPD uses 453.550 for intercity with the Villages, Bellaire and maybe even Rice so may be worth a listen too. Paramedic plus has a VHF freq, dunno what for, but it is 452.100 and the old West U PD channel was 460.275. If you need any trunking data on the Missouri City stuff, e me and I'll send you what I have. Good luck and let me know what you find, or if anyone else has any info... :)

hi.. i've been trying to locate a manufacturer of, or substitute for a
2SD1676 transistor used in a portable scanner radio as an audio driver (i
think). I don't know the pin basing (EBC-CBE) since the device is open.
It's packaged as a SP-92, but space would permit the use of a TO-92.. if i
could find the specifications for it.
Suggestions of places that i might look online will be appreciated
Thanks

I presume that you looked at the Programmit web site? Also, I'm sure that John M. can give you any info you need. He's also wrote an article for Nuts and Volts about this project, which may be helpful.
http://www.qsl.net/ka2pyj/index.html

Scotch taping the interface to the outside of the scanner is terrifically low tech! It can go inside the scanner, although with the Opto interface, if you want...

I don't understand why all of the info in the scanner was erased after you opened the scanner--dead battery or accidental press on the reset switch, may be?

Check a Ham Radio or commercial radio supplier.
It is abit more expensive and is harder to work with since it has a large
center conductor.
Connectors are harder to solder.
I'm not sure but there might be special connectors available that make
installation easier.
It is a cheaper way to get nearly hardline performance.
Smacker

9913 is a very good cable and yes, "special" connectors are indeed
necessary to fit the larger center conductor; you can find them at many
LMR distributors or by contacting RF Industries. As far as why Grove or
Rat Shack doesn't sell it, you'd really have to ask them. Possibly due
to cost...

021: How do I restore cellular in my scanner ?

Forget it, pal. It ain't going to happen. The TDDRA
of 1994 expressly forbids the manufacture or importation of
"easily modified for cellular" scanners after April, 1994.
Manufacturers turned to putty and removed the cellular
programming from the scanners' CPUs altogether. Sorry, it's not
possible if your scanner was made or imported after March, 1994.

But here is a list of all those pre-1994 scanners of which I am
aware that ARE capable of cellular restoration:

PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700XLTA *4
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3
PRO-34
PRO-37
PRO-39
PRO-43 *1
PRO-46 *2 *5
PRO-51 *2
PRO-23 *2

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in
battery compment), or no "A" in the serial no.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on back).

Note 3: Date of mfg code must not end in the letter "D", except for OAID.

Note 4: Date of mfg code must not end in the letter "D".

Note 5: Units with date code of 5A4 can tune cellular in 30 kHz Steps using a keyboard entry sequence.

For instance, PRO-43's imported before March, 1994, are modifiable, while some brought in during March and all thereafter are impossible to modify. Date codes of any -A2 or -A3 and only 1A4 and 2A4 are assured of being modifiable. 3A4 and up probably aren't.

The above list does not include those scanners that were naturally capable of receiving the full 800 MHz band, without modification, some of which include:

J.I.L. SX-400 AOR-950 Icom R-7100 *
Regency MX-4000 AOR-1000 Icom R-1
Regency MX-5000 AOR-1500 Icom R-100
Kenwood RZ-1 AOR-2500 Icom R-9000
Uniden BC-800XLT AOR-3000 * Icom R-7000
Yaesu FRG-9600 AOR-8000 *

* pre-1994 only

Some of these radios, if still current, had the cellular removed by the factory after March, 1994. There may be possibilities of restoring cellular in later models of the AR-8000, AR-3000, and ICOM radios by replacing an EEPROM or reprogramming one, but that is beyond the scope of this FAQ, and in general, should not be considered feasible.

==========
022: What about cellular restoration ads for post 3/94 scanners?

Yes, I used to see magazine ads to "restore" cellular or to "unlock 800 MHz" in newer scanners. Gasp! This is almost a deception. See, they advertised the "VD" mod.

Virtual Downconversion - better than a venereal disease, but not by much. To my way of thinking, it is an inferior method of "unlocking" the cellular bands because:

A. They're not really unlocked. VD is a trick of turning off one oscillator and turning another one on. Typically, they set the scanner to the 400 MHz band, and then turn off the normal 400 MHz Local Oscillator and turn on the one for 800 MHz to make cellular receivable on the 400 MHz display.

B. There is no logical correlation between the actual cellular frequency and the displayed frequency. It varies from one radio to the next, but suppose 880.000 MHz comes in. It might be received/ displayed on 432.6775 MHz. Duh....??

C. The full cellular bands of 823.950-849.000 and 868.950-894.000 are not available by this method. In fact, only a small part of one or the other (often not both) is available, like maybe 10-20 MHz of the total.

D. There is no 30 kHz stepping. You're limited to the default CPU "rules" for the band in which the cellular appears, typically 5 kHz or 12.5 kHz.

E. The exact results of the VD mod, generally described above, depend on the scanner. Results vary from one to the next. None are what I'd call "good" or even acceptable.

The good thing that can be said for the VD mod is that it is the ONLY way to get any cellular at all from post March-1994 scanners. So, the advertisements that you may have seen are not exactly "fraud".....but you sure don't get much for your money.

==========
023: Are any mods available for my scanner ?

You may have the wrong impression about scanner modifications and hacking. Mods are not "available" in the sense that they can be found on a store shelf, or laying on the top of someone's mind who can tell you in so many words or less how to turn that that Snakebite X101 scanner into a fire-breathing, rip-snorting smoke-belching behemoth of a Turbowhopper.

All scanners can be modified for something; generally a dozen or more things. But only a few scanners have anything written about them in detail. And you have to know where to LOOK. You can't just up and ask for "mods".

Well, you *can*, but you won't get a substantive reply.

It takes me several days to several weeks and sometimes MONTHS to work up and write about a hotshot mod for a decent scanner, and after THAT level of effort, it's not possible to make it "available" off my fingertips. Continue reading below. There are answers to your question.

==========
023a: What mods do you have for my five scanners?

I wish I knew what people mean by: "what mods do you have..." I don't "have" mods, exactly.....

I wrote three books and seven years worth of the monthly WORLD SCANNER REPORT that feature mods for a variety of scanners. With over 900 scanners ever marketed, I don't pretend to cover

them all.....just, a fraction.

Many of "my mods" can work with most any scanner.... but there is no way I can write explicit instructions for more than the bench model on which I developed that mod. I can and do offer hints on how to apply these mods to other scanners but again, not having the scanner in front of me and not having the Service Manual, there is little I can do other than hint.

I have to leave it to the user to study the published materials and then ask specific questions to which I am happy to provide specific answers...if I can. That's about as good as it gets.

You are strongly encouraged to thumb through my books and through the back and current issues of the WORLD SCANNER REPORT to see what interests you and to pick topical material from which you can phrase specific questions that have a possibility of an answer.

As it is, all I can say at this point is that DOZENS of mods are possible for your scanners, but I have to leave it to you to do the legwork and research. And when you have specific questions, then I can answer them.

==========

023b: Can you send me "the mod" for my scanner?

Well, what is "the" mod? There are dozens of possible mods for your scanner. Regardless, the answer in general is no, I don't "send" mods. I have published hundreds of mods for various scanners and other radios in my books; in the monthly World Scanner Report, and as text files on my Web and FTP sites. You are free to exhaust these resources to your heart's content.

Due to the overwhelming flood of requests for this kind of information, I can't personally research and respond to each of these requests. There just isn't time in the day for that workload. If it's free information you want, try my Web and FTP sites. If you don't mind paying for better quality info, then try my books and/or the monthly World Scanner Report.

Lastly, you can try the Usenet REC.RADIO.SCANNER newsgroup where I and others sometimes publish modification information. It's free if you have a connection to the Internet and a Usenet reader/ editor program.

==========

024: Where can I find mods for my Brand-X scanner ?

Mostly you can't. There are only a handful of scanners ever made that were worth solitary, focused research and development, specifically for that scanner. Those scanners include:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042
PRO-2022 PRO-43 PRO-34 PRO-37 BC-200XLT
PRO-26 PRO-39 BC-3000 PRO-64 PRO-2041
BC-235XLT PRO-90

You can find occasional articles and files on "mods" for other scanners not mentioned above, but they are the exception to the rule. Start by looking at my Web and FTP sites, and peruse quick-links to other sites from my WWWeb Sites:

http://ourworld.compuserve.com/homepages/bcheek

or:

http://204.210.11.204

My Web Sites have quicklinks to other sites that may contain a file or two on generic "Snakebite" scanners. But don't get your hopes up.

Now here is the problem: I am one of the few, (if not the ONLY) engineers fully committed to scanner mods.

Yet, there are over 900 scanners on the historical list now. It is physically impossible for me to dedicate attention to any but a few..

That small list of scanners above reaches out to tens or hundreds of thousands of owners. There is no time left for me to work on generic "SnakeBite" scanners that have little to offer, even after hours of hard work! But take cheer and read on.....

==========
025: So you mean there are no mods for my scanner ?

More or less I mean that, yes. But, that's not to say yours can't be modified. It can! It's just that there is nothing published for it; nothing in the way of step-by step instructions with graphics, photos, and details.

No one would go to the time and trouble, you see? The preponderance of published hacking information is for those scanners listed in Question 24 above. Other scanners just aren't interesting enough for professional investigation.

An engineer who is capable of designing super-hacks for that "SnakeBite" scanner is not going to own one! Instead, he will own one in the Question 24 list, one that is eminently capable of some very powerful modifications in the first place.

Now I said your "SnakeBite" can be hacked. It can.

But you are more or less on your own in the sense that I cannot direct you to a "shopping list" of mods from which you can pick and choose. There is no such list. Any hope for you is to first figure out what you want to do, and ask me a specific question.

I can give you a few answers in advance:

No.

No, your scanner is likely not capable of cellular; scanners made or imported after March, 1994, are not cellular-capable. Most scanners are not likely to be capable of extra memory; additional frequency coverage; and things of that nature that pretty much require factory design in the first place. (See ahead for Memory Modifications)

Yes.

Yes, your "SnakeBite" may be capable of certain mods, a few of which include the following: (You wanted a list?)

1. Tape Recorder Jack
2. Automatic Tape Recorder Switch (beats VOX!)
3. Extended Delay
4. Tone Decoder-Rejector Countermeasure
5. CTCSS mod
6. S-Meter
7. Scanner-to-Shortwave Interface
8. Carrier-On-Indicator
9. Audio Improvements
10. Beep volume or disable
11. Squelch Improvements
12. Remote Controller
13. Baseband audio output for data decoding
14. Event or "hit" Counter
15. Shielding of plastic cases
16. External DC power
17. Improved Adjacent Channel Rejection
18. Speed up of SCAN & SEARCH modes

Then, maybe...depending....on the scanner.... the following digital and/or esoteric enhancements.....???

19. Interfacing to a computer
20. Subsidiary Carrier (SCA)
21. Extended Memory to 25,600-channels & up
22. 54-88 MHz restoration
23. Data/Tone/Noise Rejection
24. Cellular restoration (See Question 21)

==========
026: So how can I do some of these mods?

That's a problem. No one has written them up for the basic scanners. About the only way I can think of is to get one or more of my three books and a subscription to the WORLD SCANNER REPORT. Research and study up on the mods we've developed for other scanners, and then compare the procedures for that specific scanner to yours. Often, when I write up a mod, I give hints on

how to apply it to other scanners.

Also, if you ask me *specific* questions, I can give specific answers. If you ask "how to do a memory mod", I'll have to refer you to something already in print or published somewhere. If you are doing a memory mod and run into trouble, then I can help you with that trouble.

==========
027: Memory mods? How can I increase the programmable channels?

That depends on what kind of memory storage system is used by your scanner. There are three kinds:

1. On-board CPU RAM (Random Access Memory)
2. Static Random Access Memory (SRAM)
3. EEPROM Electrically Erasable Programmable Read Only Memory.

The first kind is most prevalent and there is no way to expand that kind of memory. It is, however, usually limited to scanners with 51 channels or less of programmable memory. 100-channels and up are usually done by methods 2 or 3. So your first step is to determine what kind of memory is used by your scanner.

EEPROM memory is expandable, but very difficult under most circumstances. SRAM is the easiest and offers the largest expansion capabilities. For example, the PRO-2004, PRO-2005, and PRO-2006 can be expanded to 25,600 programmable channels (and more)! The PRO-32, PRO-34, PRO-37, PRO-39 & PRO-2022 can go to 12,800- channels and beyond. The BC-760XLT, BC-560XLT, and a few others can be taken to 6,400 channels and more. The PRO-2035 and PRO-2042 can be taken to 16,000 channels and beyond. Th PRO-2041 and PRO-64 are good for upwards of 25,600 channels.....

My Extended Memory Modifications are amply documented in excruciating detail in my books and in the WORLD SCANNER REPORT, complete with diagrams, photos, and many pages of instructions such that most casual hobbyists who know a soldering iron from a tire iron can do the work. This kind of mod is not suited to being given out in an e-mail or a forum message in so many words or less. You will need to acquire the instructions before doing the work.

==========
028: How do I tell a SRAM chip from an EEPROM from CPU RAM?

If you can't do this on your own or after the below explanation, you are probably not a candidate for such a wild adventure at this stage of your hacking career.

Most CPUs hold a small amount of RAM (random-access- memory), sufficient to store anywhere from 10 to 50, maybe a hundred channels or so. This is the case for most scanners, so there is

no way to increase that memory. Fortunately, there are two other methods of RAM used by a few scanners that offer possibilities for expansion.

EEPROM: The least common and least expansive is EEPROM (electrically erasable programmable read-only-memory). The PRO-43, PRO-26, BC-2500XLT, BC-200XLT, BC-100XLT and BC-3000XLT, for example, use EEPROM programmable memory. It is possible to expand EEPROM-types of memory, though not by such huge proportions as the SRAM type. EEPROMs are usually tiny little chips with 8-pins.

SRAM: A handful of scanners use a separate SRAM (static random-access-memory) chip for storage of frequencies and custom channel settings. It is this type of memory that can be easily and economically expanded by factors of 2, 4, 8, 16 and even 64 times the original volume! Scanners known to employ SRAM memory include the following:

PRO-2004 PRO-2021 PRO-32 BC-760XLT
PRO-2005 PRO-2022 PRO-34 BC-950XLT
PRO-2006 PRO-2032 PRO-37 BC-590XLT
PRO-2035 PRO-2041 PRO-39 BC-600XLT
PRO-2042 PRO-64

There may well be other scanners that use SRAM memory, but either I forgot about them or don't know. If you're curious about your scanner's potential for memory expansion, you can just about forget it for those with fewer than 100-channels. The CPU's RAM easily handles 10 to 100 channels or so. If your scanner is not on the above list, but has 50 or more channels, then look over its schematic diagram and parts list or scrutinize its Logic/CPU Board for any of the following types of SRAM chips:

uPD446G-15 TC-5517CF-20 LC-3517BM-15
CXK5864BP MB-8416-20LPF BR6265BF HY6264

or something similar, disregarding the last few digits and letters. An SRAM chip is generally characterized by a rectangular shape with 24 to 32 pins, each of the longest sides holding half the pins. An SRAM chip in a schematic diagram will be characterized by eighteen or more of its pins going straight to the CPU chip. Any chip with less than 24-pins is not likely to be an SRAM; neither is any chip in a square format. SRAMs are rectangular (DIP or SMT) with 24 to 32 pins. Pinout notations of SRAM chips will include mystic codes such as:

A0, A1...A9, R/W, CE, I01, I02...I08, OE, etc.

==========
029: My scanner has an SRAM; how do I do the mod?

Get the published instructions for Extended Memory Mods using larger SRAM chips. Start by reviewing my free Table of Contents and Index to the World Scanner Report where you will find articles on memory mods. Get at least one of my books to supplement the WORLD SCANNER REPORT. The ULTIMATE SCANNER book is a good choice.

The Table of Contents and Index to the World Scanner Report can be found on my Web and FTP sites. They're also contained in my product information files:

PRODINFO.ZIP or PRODINFO.EXE

I can send these files by e-mail upon request, or they can be downloaded from my Web and FTP sites.

Since all SRAM chips are much alike, my instructions for one scanner generally apply to all, and are not too difficult to follow, provided you can find your SRAM chip in the first place.

==========
030: Do you do scanner modifications like memory mods?

Sure. Contact me privately and we can go from there. One note, though: I don't do cellular mods anymore. The FCC has gotten persnickety about that sort of thing. In general, I don't do speedup mods anymore because they cause more problems than the speed increase is worth.

==========
031: I'm not interested in all your mods - just one. Will you photocopy the information for me?

Not if it's in a copyrighted publication. My publishers own the copyrights to my books and my company owns the copyrights to material published in the World Scanner Report. It would be unethical, illegal, or both, for me to make copies.

If your budget is tight, you can in many cases get basic information for free from my Web and FTP sites and the real hard core stuff for $5/up by purchasing specific copies of the World Scanner Report. It is not always necessary to buy my information order to do the mods. On the other hand, my published mods are NOT the low degree sort of thing you find on BBS's and Internet sites with a few sentences or paragraphs and maybe an ASCII drawing if you're lucky.

My mods are detailed and well documented with graphics, including schematic diagrams, photos, and illustrations. This kind of work can't come for free and I make no bones about it.

On the other hand, there may be no charge if all you want are the simple mods like the cellular mod to the PRO-2006.

==========
032: So how do I restore cellular in the PRO-2006?

1. Remove the top cover of the scanner.

2. Look down inside the front panel behind the #3 key of the keyboard, and clip the exposed leads of the two coppery colored diodes standing on end. One restores cellular and the other gives a FREE 25% speedup of the SCAN function.

3. Replace top cover.

See, that's the kind of stuff I can provide for free. And I am happy to do so. I can't pay out of pocket the high costs of photography, graphic arts, and computer hardware..... There is a difference.

If you don't believe it, then grab a few free hack files from a BBS or from the Internet.......and then invest in a copy of the World Scanner Report or one of my books.... See for yourself. That's the best way. You'll become a believer.......

==========
033: How can I improve my reception capabilities?

Easy - maybe. Just increase the height of your antenna.

Each 10-ft increment of added height can yield an apparent "gain" of 3-dB. For scanner signals, 3-dB can be all the difference between good reception and none at all! There is no substitute for height of the antenna when trying to receive signals outside your immediate geographical area of more than a few miles.

VHF and UHF signals weaken dramatically as they travel along the surface of the earth (groundwave or plane-earth wave); much more so than the spacewave that travels a couple of wavelengths or more above the earth's surface. Low antenna heights intercept the spacewave of only very close transmitters, and the groundwave of all others. Yes, the quality and type of antenna makes a difference to a station's reception capabilities, but the single most important factor is the height of the antenna, regardless of its quality and type.

Next to antenna height, the quality of the coax cable is an important variable. Just about any coax is fine for 10-ft runs or less. If over 20-25 ft, then use RG-6 satellite cable unless you want to go whole-hog on Belden 9913 or Andrew LDF-2A hardline coax. In no case, should you use RG-58 or RG-59 cable except on very short runs, and not even then???? Signal loss in those two cables makes the difference between hearing and not hearing, compared to RG-6 satellite cable.

Do NOT pay any mind to the prevailing opinion in some quarters that 75-ohm coax is too lossy because of the impedance mismatch. That's foolishness. 75-ohm coax connected to a 50-ohm load

results in a 1.5::1 VSWR, for a 4% signal loss (about 0.1-dB), hardly worth a bead of sweat compared to the natural 25%-50% losses in RG-58 and RG-8 cables.

Antenna height and good quality coax cable will help you hear all there is to hear from your location.

==========
034: How can I install the military aero band in my scanner?

You can't, and that's that. If your scanner came with the military aero band (220-400 MHz), then you're Fat City. If it did not come with it, there is no way under the sun of "restoring" it. You can't restore what ain't there.

==========
035: How can I modify my scanner to follow trunked systems?

You can't, and that's that. Each trunked system is as different as night and day with respect to other trunked systems, even from the same vendor.

It is possible for the hobbyist to gain some skill and fortitude in following trunked system conversations. These techniques are scattered around in various written works, from books, magazine articles, and prefaces in frequency directories...to text files on various BBS's and Internet archives. These techniques, hints, tips, and kinks cannot be recited here in so many words or less. One good starting point might be the preface material in any recent edition of Radio Shack's POLICE CALL books. But in a word, you cannot alter your scanner to follow trunked signals.

Uniden's and Radio Shack's TrunkTracker series of scanners are specifically designed to follow certain trunking systems. Keep an ear posted to the newsgroup forums for news of these interesting scanners as they become more popular.

There is some interesting software appearing around the Internet these days....that may be useful in trunk following, but I really can't discuss anything substantive at the moment.

==========
036: My PRO-2004 has problems, first mild and now severe. It has been repaired several times. Can it be fixed?

It is possible that your PRO-2004 has defective solder joints. Back in 1986, there was a production run of the PRO-2004 manufactured with a defective wave soldering machine. At first, it was only marginally defective, but it worsened and degraded with time.

The result, by the time the malfunctioning machine was discovered, was that many defective PRO-2004's had been shipped to market. Some immediately failed within the warranty period and

were repaired or replaced. Others didn't fail until after the warranty expired, and were either repaired or junked. Some didn't fail for years.

Failures appear to come in waves.....periodic rashes. Defective solder joints are a serious problem, because the radio can be fixed only to the extent that it is broken. Repaired solder joints today have no bearing or relationship to those headed for failure in a week, a month, or a year. There is no economical way to repair them all in one fell swoop. A PRO-2004 with defective solder joints is very likely to develop more problems with the passing of time. There can be no guarantees against subsequent related or unrelated failures.

With that in mind, yes I do such repairs, but I cannot guarantee that other failures won't occur. Costs of repair can be high, and I would estimate the first repair tag to be $100 plus return shipping. I know, it's a bum deal, but I can't do any better than that except to offer to buy the unit for my repair parts bin.

I pay $25 plus shipping for defective PRO-2004's in reasonably clean condition. (No basket cases....) You might consider this as an alternative to continued repair bills.

==========

037: Can my scanner be interfaced to a computer for remote and automated control, as well as for programming of the memory channels by the computer? Can the interface acquire data from the scanner and send it to the computer?

In a word, yes. Many scanners "can" be interfaced to a computer for one-way control and automated programming of the memory channels. These scanners include:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042 PRO-2041
PRO-2022 PRO-34 PRO-37 PRO-39 PRO-43 PRO-26
PRO-64

Probably quite a few others are possible.

There are three scanners that are capable not only of the one-way mode of remote control and automated programming, but also of a "data acquisition" mode where the scanner sends its display (channel, freq, bank, mode, delay, lockout) and other data to the computer for automated logging and data processing. These scanners are the PRO-2004, PRO-2005, and PRO-2006.

Several companies make scanner/computer interfaces, including Optoelectronics and COMMtronics Engineering.

Each interface has its own unique characteristics, advantages, and limitations, but all are "good" in the sense of freeing the operator from much of the labor and drudgery of scanning. The

Optoelectronics interfaces are generally limited to the
PRO-2005/6 & PRO-2035/2042.

A "roll your own" computer interface was published in the World
Scanner Report, V2N1-V2N6. Another more powerful one was
published in my 3rd book, THE ULTIMATE SCANNER (Cheek3).

COMMtronics Engineering's CE-232 Scanner/Computer Interface is in
its fourth year and continues to be a front-runner and state of
the art. For more info:

http://ourworld.compuserve.com/homepages/bcheek/

ftp://204.210.11.204/intrface/

John Montalbano KA2PYJ, seems to have designed a nice
one-way interface and control software. I can't vouch
for it, but go to the following URL and see for yourself.

http://www.qsl.net/ka2pyj/

==========

That's it for now. I will keep this FAQ updated. If you see things
that need to be added to it, by all means, let me know. If this FAQ
fails to address your question(s), then hit me with 'em again, but be
specific. And be detailed with symptoms and observations if you need
tech support on mods or troubleshooting and diagnosis. Use e-mail if
you can.

Strange. But, the Pro-46 is also made by Uniden, isn't it?
I don't have that problem with that scanner. But, thanks for the
input though. I wasn't sure if that was normal or not. :)

John, I guess the best indicator, is the number of people who have
made posts with statements such as...

John, Your a MORON!
BACK IN THE BOX MACKEY
Get a life Mackey
John (many assorted expletives deleted)

and on and on.

Now, many of these have come from people or posters that cannot
be verified as being an actual poster, so let's discount posters
that do not use a real name, real ISP (Meaning not ISPs such as
USA.NET) and perhaps people who do not use a callsign. Only
take posters who have at least 2 of the above.

Looking a Dejanews, it clearly shows HUNDREDS of people who
fit the above description making comments such as above.

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave,rec.radio.swap,sbay.forsale,rec.radio.amateur.equipment

I have a MINTand very seldom used FRG-9600 which covers from 60-950 MHZ continously in all modes. The radio does not have any nicks, dents, or scratches whatsoever.

Its been sitting in the original box and packaging for about a year. I'm a non-smoker and the radio's never been outdoors. It includes the following:

* Original manual
* Photocopy of service manual
* Mobile mounting bracket and bolts (unused)
* TV video board installed
* Yaesu AC adaptor
* Original Telescopic whip antenna

This is probably the nicest 9600 you will find. Accordingly, I would like to ask for $450 shipped to lower 48 States. Thanks!

2473. FS- AOR 3000A - Unrestricted Coverage

I have an absolutely MINT AOR 3000A. It does not have any
imperfections, blemishes, or even dust on it. I am a non-smoke and
the radio has never been used outdoors.

There is nothing wrong with this radio. I have way too many and need
to sell some to make room for new toys. The 3000A comes with the
following:

* Software and computer cable
* AC adaptor
* Original owners manual (hardly touched)
* Telescopic whip antenna

I threw the box out long ago. I would like to ask $800 + actual
shipping cost for this radio. Thanks!

> picture? Or is the best way, just to buy one?

You don't need a picture and you don't need to buy one.
You can roll your own about as easy as you can walk
around the block, and in about the same time.

First, the math: A dipole is a half-wave in length,
with two quarter wave sections. We have to figure
the wavelength first. You said 40-50 MHz, so let's
shoot for the middle at 45 MHz.

C 984,250,000 where C = speed of light
Wavelength (ft) = --- = ----------- in ft/sec
F 45,000,000 F = Frequency, Hz

= 21.9 ft full wave

1/4 wave = 5.5 ft

The hard part now out of the way, you need two pieces
of 5'6" aluminum tubing or other light, but stout metal.
It could even be WIRE stretched taut along a rigid support
like maybe a dowel or a fiberglass rod or even a strip of
plywood. You take your pick, but devise a mechanical means
of holding the two elements of the antenna like this:

5.5ft 5.5ft
----------o o----------
feed

Now, at the center of the dipole where the "o's" are,
is the feedpoint, where the gap should be about an inch. For
maximum efficiency to a scanner, you want to afix a regular
TV matching transformer, called a balun. Radio Shack's #15-1140
is a good one that will work fine.

The two flat leads of the balun go to the antenna feed
points. If the antenna is copper wire, you can solder
the flat leads of the balun to the antenna elements.

If it's aluminum or something that won't take solder,
then use sheet-metal screws to connect the flat leads
to the antenna.

The other end of the balun is obviously for the coax cable
which can be RG-59 for short lengths or RG-6 for longer
lengths, though at 50 MHz, it's not too important.

Attach Type F connectors to both ends of the RG-59 or
RG-6 cable. You cna buy pre-made lengths, too. Screw one
end onto the balun. Mount the dipole in the vertical
dimension, not horizontal as shown above. It would be
helpful if the coax could meet the antenna like a "T"
kind of like this:

```
|
|
|5.5ft
|
o--- RG-59 or 6
1" X ]==============> to Scanner
o--- coax
|
|5.5ft X is the TV matching
| transformer.
|
```

A short cross-arm about 2-3 ft long will do, which can
then be mounted to a vertical mast.

Then route the coax down to the scanner. On the scanner
end of the coax cable, attach a Type F-to-BNC adapter
(RS #278-251) and connect to the scanner's antenna port.

Voile! You're in business. As you can see, the job is
mostly mechanical; hardly anything hi-tech.

```

I have a beautiful 400 channel handheld scanner. Its the 2500XLT in its original box. It even has the original manual and warranty paperwork. The radio is the early model with full coverage but has been unmodified.

There are no scratches or blemishes on this radio. I am a non-smoker and this scanner is very seldom used because I have many others that I play with, such as Icom R-10, AOR-8000...

This radio has been sitting in the box in my closet. It comes with the following:

* Original leather carrying case (unused)
* Two Uniden battery packs, extra one purchased new with the radio.
* Original manual
* Original rubber antenna

This is probably one of the nicest used 2500XLTs you will find. It has not been modified at all, and is the earlier version capable of unrestricted coverage. I would like to ask $300 for it. Thanks!

I have a PRO-32 that works very well, but is tough to take apart since the case is glued in places and the boards are connected with short soldered leads and once you get the first board off, the next board is completely covered with a metal plate with no visable way to remove it. I really like this scanner, it is more sensitive than my 200xlt, but I have given up on tapping the discriminator and I am looking at some other scanners that are easier to modify. And the only way to receive 800mhz is with a down converter. Good luck

2483. Minitor III (three) survey

Newsgroup: rec.radio.scanner
Date: 1998-03-21 00:00:00 UTC
From: pwserctr@aol.com
Message-ID: <1998032116505400.LAA29332@ladder03.news.aol.com>
Source record: 166377

I would like to take a survey from all the Minitor III (three) dealers. As you may know Motorola has not made available any schematics or part numbers for the Minitor III pager. And as far as I know they do not plan on releasing them (if I am wrong please let me know). We are considering reverse engineering the Minitor III pager in an attempt to provide a schematic.

Here is what you would get.
1. A schematic of the pager, receiver and decoder board
2. Complete diagram of all the parts on the board
3. Motorola part numbers for most of the components. (most of the surface mounted components are a standard value and used in other pagers so Motorola stocks these parts but currently you have no way of knowing the numbers)
4. Some parts are unique to the Minitor III so there would be no way of getting them

I am just taking a survey, not trying to sell anything. Please respond with a Yes you would want it or No you would not, with any comments.

thanks

> Phone lines cross my property. I guess I've got a right to tap into those too.

Phone lines cross your property? Other than the ones serving your own accounts, Not likely unless you have a contracted easement. Which you don't or you wouldn't be making the statement in the first place. Those phone lines running across the front of your yard are on the public right-of-way and guess what, they pay the county/state/Federal govt (as apropriate) for the priviledge. The phone company also pays the electric company if that's who owns the poles or property tax if they own them themselves.

And since the only phone lines to your own property are the ones you pay for, go ahead and tap them. (Yes, I know I am overlooking the National Electrial code and your state PUC tariffs and your implied contract with the phone company, but the CONTENT is at this point your own property)

The main reason is because 9913 really is not much better than RG-8.

If you want good quality coax, get rg-213. It is not subject to
UV aging.

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. I found these at Dayton one year and bought up all
the guy had. Lot of 10 grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

The regulation is correct as stated. As with all regulations there is an exception (it is part b of the above regulation). It would take pages to explain it all. The very very short version is that the device may be operated if approved. Approved under FAA regs. means tested and found to have no ill effects to any aircraft systems. When laptops and walkmans etc. first came out, we noticed that while flying ILS approaches our CDI's (this is the instrument that allows us to fly to the runway in low visabillity and low ceilings. Acronym stands for -Course Deviation Indicator) were wavering. At first we wrote up as maintenance squawk, thinking it was a failing instrument or radio. After determining the cause, we had to ,per FAA regs. as it effects flight safety, report it to the FAA. The FAA immediately issued a new reg. as state above. The FAA wanted NO portable electronic device to be operate on commercial aircraft or those operating under Instrument Flight Rules (IFR) at any time. The airlines realized business travelers would not be happy unable to use their laptops to work(play

solataire <grin>) and negociated the current exception allowing use except during take-off till 15 minutes after and during descent (when below 10,000 feet) and the approach and landing.

Mike

PS; By the way, Cell Phones are prohibitted from being used in aircraft at all times during flight by the FCC not the FAA.

Howdy everyone!

I just purchased a BC-895 the other day, and I love it.
However, I have noticed something with it that I'm rather
worried about. I don't know if its normal, but this is my
first scanner that isn't a handheld. Anyways, the
wall wart gets extremely warm when it's left on for even
just as little as an hour. This isn't normal, is it?

Thanks,
Scott

From: mikenra@aol.com
Message-ID: <19980321042213801.XAA12710@ladder01.news.aol.com>
Source record: 166420

I have the MOD for cellular on the Pro-26. I am told to use a GROUNDED soldering iron to solder in the jumper. Since I do not have a grounded soldering iron, I am wondering if a ground wire attached to the 23 Watt element on my iron and the other end grounded would be sufficient? I know it would act as a heat sink <sic> but it should heat up suitably eventually.

Any help would be greatly appreciated

Thanks in advance

What does that mean? Just because I won't sit
in on your kangaroo court judgments? hah! You
can take your judgments and shove 'em where the
sun never, ever shines.

> creep who is lucky to have the technical expertise he does,

Lucky? Ha ha ha ha ha ha..... Psssst, hey Charley Tuna,
I *make* my luck instead of sitting around polishing a
damn bench with a hard luck story and a song of woe.

> because sure as flies on shit he aint makin' it on
> personality.

Wellllll, sure as shit stinks, I never aimed to win
any personality contests. Those are too tame and
lame for my blood. Now I enjoy a good asskicking
contest once in a while. But you knew that. That's
why you are all bent over, right Charley Tuna?

> He's the kind of guy they had in mind when they invented
> the term "road rage".

Me? Hah! I don't get mad much anymore. Getting
mad just creates bad vibes and gives indigestion.
But then I don't *need* to get mad anymore.

> He's the kind of guy who arrives late at a party

Noooooooo, you're way off base there. I'm always
early. I was taught "Dominelli Time" years ago.

> and then tells everyone he's late because he was busy performing the
> world's first brain transplant or similar heroic feat.

The only times I tell stuff like that is when I actually
do it. Then, yeah, hell yes, I'm proud of it. Take
you, fer instance......you were my first patient. Problem
was, I couldn't tell which end was which. So rather than
a lobotmy, I wound up doing a rectalotmy on you. The ironic

thing is.....that it worked.

> The three words that describe him best are: "what a jag!"
> The reason he likes himself so much is because no one else does.

It's more correct to say that I don't give a shit if you
"like" me or not. You can eat my shorts for all I care.
You ain't worth being a "liker" anyway. You're the kind
who'd want something for it. And get pissed when I said no.

So, no. What part of "no" don't you understand?

> John, and I admit I am just speculating here, is a retired and/or
> unemployed old bastard with waayyy too much time on his hands.

Nope. He's a young peckerwood, with a 2" overbite, a cleft
palate, a harelip, and grafted foreskins for eyelids. And
queerer than a $3 bill. Kind of like you, when you get right
down to it, though I readily admit that your harelip isn't
as bad as Mackey's.

> He's the kind of guy who still broods because some schoolyard bully
> punched him out 50 years ago.

Yep. I kicked his ass from here to next Tuesday and it
still sticks in his craw. Just ask 'im, Charley-Tuna.

> I'll check back here again in about 4-6 months to see if there's anyone
> still on this NG besides Bill & John.

Up to your same old tricks, eh Charley-Tuna? By all
means, you just come around and drop in any old time.
And, of course, do feel free to pack sand.

Howdy...

Just took a look around inside the 2042 for my anticipated installation of the Programmit interface next week (found CN503, etc)...[you can imagine my surprise when I found my channels ERASED after I put the thing back together! YUCK!].

My question is this: How should I connect my Programmit circuit with the scanner? I purchased the etched board from Far Circuits. I suppose I could scotch-tape the board to the outside of the scanner and have 17 wires going through a hole on the top of the scanner... but I want this project to be *different*! :-)

If anyone has any pictures (or words), I'd love to see 'em!

Thanks,

Anyone will make anything up to sell (or aid in the sale of) a product. My experience with both units is that they are both equal in performance. Yes, the 235 offers an extra battery and such. The only way to go is the Radio Shack model for the 5 year TSP (Tandy Service Plan) warranty for approximately $60. You just can't beat that protection!!!!!!!

Uhuru: Captain, I'm receiving a primitive radio wave transmission
from the planet below, audio only.

Kirk: A transmission? From Planet Mackey? I thought the species
occupying the planet had only evolved somewhere between a
cockroach and a monosyllabic anthropoid. Spock, I need
answers, dammit!

Spock: Searching Captain. Two standard years ago, the planet was
visited by a rec.radio.scanner research vessel. The ships
logs show one of the planetary inhabitants had evolved
into an almost subhuman species through a freak accident
involving consumption of extremely high quantities of
prozac and a blue water derived from a fecal disinfectant
known as vanish. The prototype life form showed exaggerated
tendencies to prevaricate and create ficticious personas
using an ancient Earth computer network technique known as
"faking email addresses." The logs go on to describe many
incidents of irrational aggressiveness towards others in
pitiful attempts at gathering attention. The ships linguist
has translated the language. I'm programming the computer
with the information. The universal translator now speaks
and understands the language known as Toilet Boy, Captain.
The translator will allow us to hear each sentence as it is
translated.

Kirk: Acknowledged Mr. Spock. Uhuru, put the transmission on
audio.

Uhuru: Yes, Captain. On audio.

Toilet Boy: I'm 6'1" & under 200 lbs, so I am *HARDLY* "overweight".

Translator: I'm 5'6" & am trying to keep my weight under 250 pounds.
Hopefully, my lover Richard Simmonds will be able to
help me loose the weight by pumping me silly.

Toilet Boy: I see public people every day!

Translator: I watch a lot of television in between selling womans
shoes.

Toilet Boy: NO, all the equipment is new out of the box, others do
the maintainence.

Translator: Of course, the shoes are new. After I try them all on, others clean them up before I sell them.

Toilet Boy: No, it is a LARGE corporation you have DEFINATELY heard of. They advertise frequently!!!!

Translator: I work at K-Mart.

Toilet Boy: Hardly, I just got a 5% raise 2 weeks ago!!!

Translator: The new shoe lifts work great. Now I'm tall enough to kiss my dear Richard Simmonds full on the lips.

Toilet Boy: Nope, I see different customers all day long for my employing company!

Translator: We have no repeat business and dismal sales because the female customers keep getting mad when I want to smell their feet and want to try on their shoes..

Toilet Boy: You were WRONG on every single one!

Translator: I'm confused. How do you work the shoe size thingy?

Kirk: Spock, your analysis.

Spock: Fascinating, Captain! Quite possibly the first totally clueless lifeform comsumed by abject misery and completely lacking any form of self esteem we've encountered. A completely useless life form.

Kirk: Recommendations?

McCoy: Damn it, Jim, I'm just a country doctor. I don't know a thing about parasite life forms. Rub some preparation h on it and call me in the morning.

Spock: It would make an interesting case study. A life form with no females of the species, rampant homosexuality, massive delusions of adequacy, excessive prevarication, and a propensity to attack anyone who comes within a few feet. I predict a 99.875% chance of extinction of the species within the next 1.3 standard years, Captain. We can satisy the prime directive by leaving this life form to survive or perish on its own.

Kirk: Very good Spock. Chekov, lay in a course for Talos 4, warp factor two. Engage.

Chekov: Aye, Captain. Course laid in, warp two. Engaging.

If Disney catches you scanning their operations they will shoot you! Actually, they have give people with scanners a hard time, asking them to deposit them with security until they left the park.

BTW anyone know what that BIG FENCE is that they haul in on these barges on the lagoon? I was at Disney this past Christmas and everynight about 10PM this long 'train' of barges had what looked like a 12 foot high fence dragged across the lagoon cutting off the resort hotels from the theme park.
No, I'm not kidding and no, I didn't have a few too many Mickey chasers ;-)

>even quicker.

If you use a piece of equipment a lot (say once a week or more), by all means use NiCd or NiMH cells. NiCd will give you the cheapest operating cost, NiMH will give longer operating time per charge.

But both of these self-discharge at a fairly high rate. If you charge a set of cells and don't use them for several weeks or a month, a substantial portion of the charge has vanished on its own.

Rechargeable alkalines have a long shelf life, like regular alkalines, so they are ideal for something that is used less frequently. They also have more energy than NiCd or even NiMh, at least for the first few cycles.

They do have higher internal resistance than NiCd, NiMH, or even regular alkalines, so they are best in devices with relatively low and continuous battery drain - like a scanner. They are really not very suitable for intermittent high-drain use, like in an electronic flash or a transceiver. NiCd and NiMH cells are much better for that.

The next advent of scanners will be DSP. Think of a CD player. About three chips: DSP, filter and amp. A reconfigurable receivers are now just hitting the market (Icom PRC-1000, WinRadio). This could be shrunk to handheld size. Four or five chips: RF amp, IF amp, DSP for detection and filtering, and AF amp plus an embedded microprocessor to run it. If you knew how the transmitted signal was encoded and how to program that particular receiver, you could decode anything. Plus add new features at will. Which is why we have not seen DSP modems as it would move us from buying boards to software for new modes.

Purdue is pushing DSP training in both EE and EET. Much of the old hardware hacking is gone. Even logic circuits are now programable chips. DSP has become the standard for front ends of broadcasting audio, CDs, video, telephone filtering. It is everywhere.

How are they going to stop us when we can build a reprogrammable, reconfigurable receiver?

Hugh Duff just posted one for sale in this newsgroup. The price he is asking
is quite reasonable ($325US) if the radio is in good condition.

I would just like to let everyone know that I got my PROgramit up and running for my 2042! The PROgramit allows computer control of many RS scanners. The thing is incredible... the parts only cost me about $20-25! Imagine me, a guy who didn't even know how pins are numbered on ICs, managing to set up such a project!

I would also like to personally thank John M, creator of the PROgramit, for the great help and advice he gave me during the construction of the project (which really didn't take that long).

Again, thank you, John, for the time and effort you put into this. I'll be registering my copy of the program today!

Info on the PROgramit can be found at http://www.qsl.net/ka2pyj/

Hi,

>Where I can get the software to control my ar2500 scanner.Also, what happened
>with the company that sold these. ACE COMMUNICATIONS

I can't answer your latter question I'm afraid but there have been
several packages that support the AR2500/TR-4500.

ACE distributed a control package produced by a Company called
"Gesmundo" (they also did one for the AR3000) - unfortunatly I have not
seen reference to this for some time and don't know if its still
availale from any sources in the States. We did have a copule of copies
left a while back but I am not sure what we have now.

ScanCat from Computer Aided Technologies (www.scancat.com) will also
work with the AR2500 so you might check that out also.

I can't just think of any others from the top of my head I'm afraid !

Hope that helps, all the best

Could a device such as WIN RADIO be remotely tuned and received from another PC via TCP/IP dialup/WWW?? Both parties would need WR hard/software I assume. Adding Real Audio in this mix, there are some interesting possibilities. If this is achievable, how many remote users could access the WIN RADIO simulataneously? Seems like it would make line of sight reception obsolete in a sense. Has anyone attempted or though of this kind of setup?

I've tried Jeff Chiltons web HF radio (http://www.chilton.com/scripts/radio/R8-receiver) but you have to wait for the audio to download. Was curious if anyone has went a few steps further in this area.

What if you have the Opto535 computer-interface board installed
inside your Pro-2042 ? Is there still room for the Programmit
circuit? (Could still need such a utility for when on the go..)

Does the circuit produce any heat? How much current does it
draw? Any other problems anyone can see with this triplet ?

Pro-2042/Opto535/Programmit/Probe 4.0 , what more could you
really wish for in a "down-to-earth" scanner setup ?

Regards,
Knut Otterbeck

I am quite sure that others have done this. Join the list at
majordomo@qth.net with subscribe programit in the body. Then send mail
to programit at qth.net and someone can answer this.
>
> Does the circuit produce any heat? How much current does it

The circuit draws very little current, perhaps 20 - 30 mA and does not
produce any noticeable heat.
>
> Pro-2042/Opto535/Programmit/Probe 4.0 , what more could you
> really wish for in a "down-to-earth" scanner setup?

How about IR remote control from a handheld controller and wireless
downloads at a few hundred feet. Visit http://www.qsl.net/ka2pyj for
more details.

I can state categorically that our Industry Canada is not interested in
persuing people listening to Cellular Telephones or using information
obtained from listening to a scanner for profit.

That's the fact jack.

> center, there are wide swings of impedance.

Actually, normally this only rears it's ugly head when you are dealing with HF frequencies and stringing up wire dipoles. I think the original poster was interested in 40-50MHz. My only concern would be the polarization of his dipole. It would probably be a good idea to mount it vertically. It's possible that if it were mounted close to the tower that the impedance would be reduced somewhat.

> Partly to design, of course, but also random
> heights and a huge bandwidth.....

There's the key right there. The bandwidth.

> In actual practice, the homemade dipole will exhibit
> impedances ranging from 100 ohms on up to 300 ohms,
> so the actual case will usually be better than
> a 4:1 mismatch.

Um, I'm not sure about this. But I'm sure about my next suggestion....

> Lastly, a dipole is a balanced antenna, so there
> is a great value in using a balun to match the
> antenna to the unbalanced coax....basically the
> antenna will do all the work and not the coax...
> and the coax will serve its purpose of shielding
> and low loss.

There's is a definate benefit in making the dipole a "folded dipole". This would improve the bandwidth considerably - especially when used in conjunction with the 300-75Ohm balun. If the original poster would like instructions I will be pleased to provide.

Cheers!

Hello.

I am looking to purchase a Minitor I or II pager (with charger) with the

frequency of 154.070 already in place. The PL tone function and
quick-call capabilities are not needed as I would like all transmissions

on this particular frequency to come through.

I would prefer a used Minitor, but would welcome hearing about any new
pagers that are at a decent price and can be shipped 154.070 capable.

Thanks for any suggestions or assistance!

Close but not quite!

Actually, amateur radio is a seperate radio service than the citizen's radio service (CB). CB uses 27 Mhz, Amateur radio uses MANY different frequency bands. A extensive test is required for a amateur radio license in most countries, and you can do FAR more with amateur radio than CB.

If you are interested in getting an amateur radio license, let me know!

2590. Scanning from the Death Valley Backcountry...

Newsgroup: rec.radio.scanner
Date: 1998-03-22 00:00:00 UTC
From: Adam Lane <alane@thegrid.net>
Message-ID: <351597CF.4F31@thegrid.net>
Source record: 166176

Just got back from Death Valley a few days ago; it's a "must see"
for the desert flower bloom...only a handful of blooms like this
occur in a century.

I used my scanner radio while car camping on backcountry roads for the
first time and was amazed to find all of the great information
that came across on 170.1 MHz...

An extended weather report was broadcast every day at about 9:30am.

I got to hear the very second that Titus Road opened.

All road closures were broadcast, as well as all roads that were
open.

It's worth it to listen just for the specific extended weather report
just for the Death Valley region. The day after it rained, they
broadcast all of the rain totals...it rained 0.1" on me...that was
a fierce night of winds.

It's a fine public service and I did not expect to get so much
valuable information! It was like having the ranger front desk
right at my fingertips...in fact, I found that some of the rangers
at the visitor center front desk were not completely in touch with
the status of the park. The radio has the most accurate information.

You could also hear the rangers performing law enforcement
duties such as dealing with people camping in illegal areas,
and also organizing a trip in the backcountry to check on
people camping out there.

I camped up Hanaupah canyon for two days; on the second day at 9am, I
could hear a ranger across the valley at Badwater using his
binoculars to count the number of people camping out there on
Trail Canyon, Hanaupah Canyon and Johnson Canyon roads.
As well as the people camping less than one mile from West Side
Road...a no-no. They went out to Hanaupah Canyon later in the
day at about 1:30pm and ran people's license plates and checked
permits. I had moved on to a much better campsite, in the midst
of a very dense bloom of flowers (and a very dense cloud of bugs)

Very few people actually get backcountry permits, but they are
optional. I did not have a backcountry permit for the first 5 days,
but I did get the permit for my last 4 days out there...I like to
collect 'em.

The official story about backcountry permits is that it indicates
the amount of use that backcountry sites get. However, it became
apparent that the permits are also used to determine which road
the ranger travels to be "most efficient" for checking on people.

What a thankless job. I appreciate their work and would like to be
a backcountry ranger myself, but I could never tolerate the years of
subservience to a brainless bureaucratic system that it would require.
The law enforcement aspect is depressing too...imagine running someone's
licence plate at the top of hanaupah canyon. Golly.

One ranger gets to drive the ultra-cool hum-vee, but he has been there
for over 20 years!

Other frequencies I could hear way out there...
154.725 - Local sheriffs in the Panamint Valley. Heard about
a plane crash on this freq.
170.4 - A BLM frequency, I think
853.075 - Law enforcement located to the south of DV
855.725 - More law enforcement to the south
153.8 - Another BLM frequency, I think.
154.34 - Very faint...Las Vegas area

I could also hear RF interference from my camera from 30 feet
away...the open desert is a very, very quiet area with respect
to radio interference. You can hear very faint signals.

Although I saw two jets "dogfighting" right above me, I could
not hear 'em on the military frequencies.

I would not hike around with one, but as for desert backcountry car
camping,
a scanner radio is now part of my "must have" equipment.

However based on the statutes that Dave posts on his website, it
is illegal in Canada (technically) to monitor cell, radio-telephone,
and cordless... It is not illegal to own a full-coverage scanner.
Andy is correct in saying that enforcement has low priority, as
they don't have the budget to enforce the current law. So the bottom
line is don't tell someone you are listening to them...

2596. Atomic Clock Radio

Newsgroup: rec.radio.scanner
Date: 1998-03-22 00:00:00 UTC
From: wb5sxk@aol.com
Message-ID: <1998032223580800.SAA17885@ladder03.news.aol.com>
Source record: 166182

While wandering through Wally World a couple of nights ago, a box high upon the shelf in the electronics section caught my eye. It was labelled "Atomic Clock Radio". There were none of this item on display and the item was so high on the shelf, I had to get a store clerk to get a ladder to get one down. Upon examination of the box I found it contained a clock radio with a built-in WWVB receiver which sets the clock to the NIST atomic clock. Anyway the cost was $39.96 so I bought one. After taking the item home and plugging it in, it captured a signal and set itself within about 5 minutes.

The radio is in is a purple box with large white letters "Atomic Clock Radio". It is an Emerson Research CKA1000. The UPC code is 2580603111. and the WAL-MART price sticker has the number 05/198 above the price.

I hope this post is not too much off topic, but it seems that an accurate clock in the shack is a big asset.

>.... Has anyone else had this problem?

I regret that the line out audio jack in the Uniden BC895XLT
is simply a lower amplitude earphone-type jack.

Its level varies with the setting of the Volume control.

This shortcoming is a tradition which dates back to the
1976-era Electra/Bearcat BC-250.

2599. ICOM R10, R8500, PCR1000 -- Beat the price increase

Newsgroup: rec.radio.scanner
Date: 1998-03-22 00:00:00 UTC
From: Steve@swssec.com
Message-ID: <3517a5da.148973407@news3.ibm.net>
Source record: 166185

Hello list,

Here's a final chance to purchase ICOM receivers at the current prices
and specials before the price increase April 1st.

All prices INCLUDE DOMESTIC SHIPPING, and our exclusive 2 year
warranty at no extra charge.

R10 -- $ 415
R8500 -- $1650
PCR1000 -- $504
UT-106 DSP option for PCR1000 -- $125 w/ receiver, $135 separately

Other receivers and accessories quoted on request.

We can take credit cards for payment, or you can mail a check. Prices
above are bottom line prices; freight is included.

Email or fax credit card orders. Snail mail other orders to:

SWS Security
1300 Boyd Road
Street, MD 21154-1836

Unblocked receivers available to authorized users. Inquire if you
think you are eligible for cellular unblocked versions. Verified
unblocking instructions for the PCR1000 and R8500 are available on the
web, but we cannot provide copies and we do not know the websites
where the instructions live, so please DO NOT ASK. They are there;
learn to use a search engine.

Above prices are valid until March 30. Payment must be in our hands by
then. Above prices supersede all others previously posted.

Don't overlook the value of a 2 year warranty. This could save a good
chunk of change if you need service after the first year.

George and John,

Here's some information about NAMBLA.

NAMBLA: WHERE WE STAND

The North American Man/Boy Love Association is both political and educational. We work to organize support for boys and men who have or desire consensual sexual and emotional relationships and to educate society on their positive nature. We speak out against the oppression endured by men and boys who love one another and support the right of all people to consensual intergenerational relationships. Throughout most of Western history (and not only Western), man/boy love has been the primary form of homoeroticism, and it is this love for which NAMBLA stands.

NAMBLA was founded in 1978, within Boston's gay and lesbian community, in response to a witch hunt against man/boy lovers in that city. Since then, NAMBLA has worked to build a community of support through our publications and conferences. Our spokespeople raise awareness of the issue in the media and academia, before community groups, and among the general public.

While NAMBLA's members represent a diversity of backgrounds and politics, we all share a libertarian, humanistic attitude on sexuality. We believe that sex is good and wholesome and that it is an important medium of personal expression.

NAMBLA condemns sexual abuse in all forms of coercion. We insist there is a distinction between coercive and consensual sex. Laws that focus only on the age of the participants fail to capture that distinction, for they ignore the quality of the relationship. Differences in age do not preclude mutual, loving interaction between persons any more than differences in race or class.

Some existing laws criminalize sexual relationships that are loving and fully consensual. These laws are ill-conceived and morally repugnant. As is our right, we advocate their repeal. Nothing that we speak or write about is intended to advocate or counsel the violation of such laws.

NAMBLA calls for the empowerment of youth in all areas, not just the sexual. We are against arbitrary constraints on

the rights and freedom of all, young and old. We support
greater economic, political, and social opportunities for
young people and denounce the rampant ageism that segregates
and isolates them in fear and mistrust.

WHy doesn't RS sell 9913??? Are you serious??? The same reason they do not sell Icom or Standard, because they sell shit. As for Bobby Grove, he likes to sell surplus cable TV coax (RG-6) at a premium price and tell you how good it is, and that the impedence of 75 ohms does make a difference when you are only using it for a receiver. Bullshit Bobby!!!

And you can buy 9913F which is VERY flexible and has better loss specs that regular 9913.

P.S. Bobby Groves business is in the shitter. Look for a "Going Out of Business" sale soon.

Since August 1997 I have been following this newsgroup to learn more about, and to enjoy the hobby of, scanners. During this time, for at least 2 weeks out of every month, I leave due to this Bill vs John thing.
I have decided that to continue receiving the enjoyment I get from this newsgroup to add all of John's postings to my kill filter.
Big Deal? Maybe not. But he is the very first one in this file where I don't even see his postings.
I do not know who is right or wrong in this endless, senseless flame war and really do not care.
The only reason Bill's postings are not killed at this time is I have seen some reasonable and useful info from him. Tho he seems to waste as much time in this war as John does.
This is just my opinion and I felt it was only fair to notified someone when his/hers postings are ending up in the waste basket not opened. (Not that I really think either one gives a damn about this newsgroup)

Thank you for listening
Bossman

Well, you sure got that wrong! A $60-$80 discone just to snoop on phone calls? He can make a dipole for $5 if that is all he wants to do. Otherwise, his best bet is an omnidirectional like the Scantenna for $39, Anyone who thinks a discone is a better option is folling him/herself and even the people who sell discones will tell you that.

2616. Website Update

Newsgroup: rec.radio.scanner
Date: 1998-03-22 00:00:00 UTC
From: Simon Collings <simon.collings@cableinet.co.uk>
Message-ID: <01bd5597$5c4b3fe0$479075c2@sapphire>
Source record: 166202
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

Dear All,

I have updated the demos for the following packages on the AOR website:
http://www.demon.co.uk/aor/

AR5000 Tuner (from AOR Spectrum Master)
Hawk for the SDU5000 (also available in Spectrum Master)
AR7030 Tuner (from AOR Data Master)
Searchlight for the AR3000A

The demo version now match the full versions.

Please note that the ftp site we have used currently has a limit of 64
users, so if you have trouble connecting please try again later.

Alternatively, you mmay have better luck using an ftp tool to reach the zip
files direct in the following locations:

ftp://ftp/demo.co.uk/pub/ham/scanners/

or

ftp://ftp.demo.co.uk/pub/ham/swl/

Good luck.

Simon

I've also had a problem with the connector on the scanner going "bad"
meaning that the socket inside the BNC spreads apart and doesn't make
contact with the antenna....

Source record: 166205

Advantages of a discone: ease of assembly, covers a wide variety of frequencies
Disadvantages of discone: unity gain

As far as 46/49Mhz is concerned, you could make a much better antenna yourself
out of a 10 foot piece of steel wire and a spare length of coax.

You need to use the ray-o-vac renewal charger for these. I have had good results using them in both handheld scanners and in 2-meter hand helds. Don't let them go all the way down before recharging them though. You will get more cycles that way, although not as many cycles as a nicad. But, IMHO a good battery for the buck!

Actually, only women have the right to choose what they do with their
bodies (Wade/Roe). So if a radio wave passes through a scanner
hobbyist's body, the female scannist has a choice on what she can do
with it or to it. However, if the scannist is male - too bad.

Quit whining. 30 to 40% of the daily traffic here in RRS is of the flamefest variety, and the rest is radio. Very little spam. Newsgroup reader procedures for using "filters" and "killfiles" may be too difficult for the technologically challenged to manipulate. Therefore; I offer this "straight forward" easy solution for those who complain of inadvertantly "wasting time" reading messages they don't particularly want to read:

STEP 1. Read the friggin subject line before you open the message.

STEP 2. *ONLY* click on messages you think you would like to read.

SEP 3. If it looks like something you don't want to read. Don't click on it. Don't read it.

You're welcome.

You may go.....Tra-La-la-la-laaaaaaaaaa.

2631. Re: Is anything on 5.4 or 10.8 Mhz?

Newsgroup: rec.radio.scanner
Date: 1998-03-22 00:00:00 UTC
From: bd703@scn.org

Cross-posted to: rec.radio.shortwave,rec.radio.scanner

Mystery solved.

I obtained a used Radio Shack DX-350 and discovered the same signal that
was coming thru the IF of the Bearcat 4-6 was present at about 9.9 mhz.
This is the BBC World Service in English.

Some quick work with the calculator shows me that the signal was getting
into the 455 khz 2nd IF, NOT the 10.8 mhz 1st IF like I originally suspected.

The IF oscillator is 10.345 mhz.

10.8 mhz - 10.345 mhz = .455 mhz or 455 khz.

The IF IMAGE is:

10.345 mhz - .455 mhz = 9.89 mhz.

I couldn't find the EXACT freq that BBC is on since the SW freq info
on their web page is in PDF, but it's certainly a few khz +/- 9.89 mhz.

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of
it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will
give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of
10:00am & 9:00pm.

73,
Bill

2640. Re: Discone for low band reception (30-50 Mhz)

Newsgroup: rec.radio.scanner
Date: 1998-03-22 00:00:00 UTC
From: mike frye <km6ab@pacbell.net>
Message-ID: <351541CD.66E273CC@pacbell.net>
Source record: 166226

Howdy Frank. The Radio shack Discone is only an antenna from approx 110mhz to somewhere in the 800s, as measured on a network analyzer. Some of the Discones made by Diamond, etc. have a whip that is tuned sharply at 49 to 50 mhz. 25 to 50 mhz works poor at best. A Discone designed for 30 mhz and up performs about the same as a 1/4 wave ground plane at the same freq. Not too bad. If your interested, I have a spare 30 to 240 mhz Discone as new I will sell for $275 + ship. Its about 8ft high and the top hat is about 6 ft across. Cost about $1100 new. 73, Mike.

Make that four.

The oldest and nearest to completion may be the ORBCOMM network being deployed by Orbital Scientific. Check out the system description (complete with frequencies) at http://www.orbcomm.net/about/sysdesc.html

You are right at this point I have not actually looked into what is legal and what is not legal. I am going by hear say, but I would in actually be interested in reading and knowing what the law says about monitoring cell phones. Stark, could you tell me where I can find this federal law that you talk about? I as a Canadian do have an interest in what the law says, however, like SOME Americans I don't always like to conform to these laws.

>And I believe that Canadians have just as little interest in actually
>READING and KNOWING what the law says as Americans.

I would have to say stay away from these. Even the mfgrs claim a maximum of 20-30 charges before they won't hold much & need to be replaced. each charge is weaker than the last, and if you discharge them too deep you can kill'em even quicker. they also shouldn't be used with "regular chargers". Go with hi-cap nicads or nickle-metal hydrides, not much difference in cost, don't need special chargers & will last much longer (hundreds or even thousand or more charges) and they are much less sensitive to deep discharges.

> war and really do not care.

Oh. You don't care? Hmmmmmm..... No I suppose
you wouldn't care, since you are not the target
of unwarranted and merciless attacks. Yes, in
retrospect, I can see how you would not care.

Hopefully, you will meditate for a while and
come to understand how *I* might care.......

> The only reason Bill's postings are not killed at this time is I have
> seen some reasonable and useful info from him. Tho he seems to waste
> as much time in this war as John does.

Is it fair to say that?

Do this: count Mackey's posts. You will not find
a one that has any merit to scanners and scanning.

Now count mine. Do a ratio or whatever simple math
it takes. Then you will see the fallacy in your
statement. I rest my case........

> This is just my opinion and I felt it was only fair to notified
> someone when his/hers postings are ending up in the waste basket not
> opened.

Excuse me? Run that one by me again. I seriously
doubt you save your newspapers, much less clip
much out of them to save. They all end up in the
REAL trash or a recycling center.

Not only that, but you spend good money on your
newspapers only to throw them away. You do not
spend money on this newsgroup.

But what's the difference between a newspaper and a
newsgroup in terms of intrinsic and inherent VALUE?

Do you notify the columnists and editors of newspaper
articles when you throw away your day-old newspaper?

> (Not that I really think either one gives a damn about this
> newsgroup)

Well, that is a fine statement. Let's see....
I count EXACTLY one post from you to this
newsgroup over the last 31-days. And that
one happens to be THIS post to which I am
replying. Soooooooooo, looking at the pure
mathematics of it, your ratio of on-topic
(i.e. "give a damn factor) is precisely zero.

Are YOU claiming to *care* more about this
newsgroup than *I* do? Really now?

No matter HOW you stack the deck in favor
of one way or the other, you WILL find a goodly
number of on-topic, caring, detailed posts
from me. You would find even MORE if people
like you....with whom I *had* no quarrel, would
simply speak the truth in their criticism, if
there just has to be some. But more succinctly,
if YOU stayed ON-TOPIC, that would be one less
cause for me to drift......

Therefore, I can only suppose that you are
yet another one of those preachers who traipse
around this old planet chanting, "DO AS I SAY,
NOT AS I DO". My tribe calls those people
hypocrites. Hey, man, with your zero-to-one topical
posting record, the prima facie question for YOU
is.....what horse did you ride in on?

It's a "high horse", that's fer duckshucking sure!

Now then....rebuttal aside...and I was certainly
entitled to one, every bit as much as you felt
entitled to *originate* your unfair criticism,
let's look at another angle now......

Let's say you're a complete newbie who doesn't
know enough to make a significant contribution
to this forum.....that's OKAY....that's great.
There are no written, hard ad fast rules about
lurking and contributing.

But did it ever occur to you that a QUESTION can
be every bit as valuable as an ANSWER? I try
to answer bona-fide questions in this forum. If
you are not satisfied with the content here,
then WHY DON'T YOU (and people like you) ASK QUESTIONS?

That certainly is one way to gently and persuasively steer a forum onto the topic for which it is suited. And it is a method that YOU can employ ANYTIME you wish.

Think about it. Because as is, your 0:1 record says nothing constructive either. You're throwing stones in a glass house, my friend! You can criticize me all you want, but it would behoove you to first put your own house in order.

Eh?

Sorry, no, you can't. A 1994 Act of Congress
forbids any scanner to be cellular restorable.
Only pre-1994 scanners are possible, and then
only a small percentage of those.

See my SCANNER MODIFICATION FAQ recently posted

Way to go, dude! Bravissimo!

I've been using the stuff my the gallon for
over 30 years now. The spray can WD-40 makes
a good flame thrower in a pinch. Good for
critters and vermin of all sorts and kinds.

Kinda scary the first time or two you try it.

Ummmm hummmm, except if that is ALL you find,
then there is something wrong with your news
server or your news reader.....or, possibly
something wrong with your cognitive powers.

One of the three, though I'd have no way of
knowing for sure which one. You might be
able to tell and then solve the problem. You're
the only one who can solve it, anyway.

There are a lot of worthwhile articles in this
forum. And there would be even more if you
really wanted them.

After all, a free market prevails....and this one
here can't be any more free. So people gets what
they wants, see?

Simple matter, really.

BTW....you are welcome (and invited) to contribute
worthwhile material, too, you know.

No. No scanner since 1994 is "restorable".
It's against the law....an Act of Congress.

See my SCANNER MODIFICATION FAQ that I recently
posted to this newsgroup. It has all the gory
details.

The PRO-64 is capable of lots of other mods,
though. The FAQ tells more.

Dunno about that, but what did it cost
you, if I might ask? Just curious about
the used market on the 9000's now.

Do you like yours?

$575 is awful high. Where'd you see that? If you're
really interested, contact me by e-mail for what's
probably the lowest price around.

Since I sell WiNRADiO, anything I say about it is
likely to be misconstrued by kibitzers and outsiders,
but suffice to say that I like mine.

Now this is truly tragic. Bill, you are considered by many to be the ultimate authority on scanners and scanning. Imagine how much you would be appreciated if you spent even a fraction of the time posting useful information that you do engaging in useless vendettas with Mackey, Boe, Glen, Andy Moss, etc.

I'll keep an eye on this thread, so post here
anything of your results or any questions you
might have.

By the way, I have used 3/4" copper water pipe
for dipoles. You can kind of clamp the two
elements to a 2x4 for the support, and then
mount it most anywhere.

I'd use sheet metal screws to fix the TV matching
transformer flat leads to it, though. Copper
pipe doesn't take solder all that well unless
you have a lot of heat. Use star washers to
ensure a good bite into the metal, too.

Should work finer 'n frog hair when you're done.

From: me@my.net
Message-ID: <6f1vp1$3bi$1@news01.li.net>
Source record: 166258
Cross-posted to: alt.radio.scanner,rec.radio.scanner

A number of people have e-mailed me about someone who has ripped off my links page (my page is http://www.li.net/~j4dice/links.html) and then sent e-mail messages out to people inviting them to exchange links (a copy of his message is below). This moron has simply taken my links page, posted it at his site and claimed it as his own. (He even left my e-mail address in the page when he first posted it at his site and also sent the e-mail message inviting people to exchange links to me!) I guess he's simply too stupid and lazy to come up with something of his own, so he has to try to impress people by stealing someone else's work. Many who contribute to this group have probably visited my page before and will recognize what he has posted at his site as nothing less than a ripoff. There is a copyright posted on the page and I had added a few things to the page to detect ripoffs such as this, so I'm looking into what to do about it, but in the meantime, I invite all who have visited my page and can see what a ripoff this site is to e-mail him and let him know what you think.

his page:
http://www1.centtel.com/scorpion/scanner.htm

his e-mail address:
scorpion@centtel.com

His e-mail message (gives some indication of the intelligence level we're dealing with here):
I am building a big htm for my site of scanner frequceny links to all thats out there.I wish to include you for free to my links page..this is going to be the altiment site for all to view for any thing they want dealing with scanners or radio frequencies.. All I ask is for you to trade links with me (your link on my page & my link on your page). http://www1.centtel.com/scorpion/scanner.htm is my link.I got yours has I type this message in my links .. in good faith that you will put mine in yours thanxs
From SCORPION VE3 SST

Thanks to those who have already e-mailed me and let me know about it.

Gee, I don't know he did put those pretty state flags in. I have to
admit I've nicked some html in my days, but geesh this was shameful.
Not even a mention where he got it, nor did he even at least change it
somehow. Everything is word for word copied. Unfortunatly, I don't
think there's much you can do about it.

Do cemetery workers prefer the graveyard shift?

I'm looking for the currently used frequencies for Los Angeles Metro area Ambulance companies. The ones I'm particularly looking for are

Bowers (800mhz)
AMR (San Gabriel Valley, Los Angeles Metro, Glendale, South Bay I believe is 46.050)
APT
Schaefer
Gerber
Medreach

Any help would be greatly appreciated. Please send replies direct email and I only get a chance to cruise the newsgroups once a week or so. Thanks.

My Trunk tracker antenna center pin broke off the first couple of weeks I had it. I robbed the one off my Pro 26; it worked OK. Then I bought a commercial BNC mount 800 Mhz antenna, since all I use the scanner for is 800 Mhz. I noticed a big improvement! Good luck,

Hi Dave,
What exactly are you looking for in such a receiver? And $575
is a bit too much these days. Most places I've seen carry it for
$500 and some for a bit lower.

> If you have used, or are currently using WiNRADiO, could you please
> give me some feedback on it's pro's/con's, and whether it's worth
> the money.

Worth the money? Maybe. Depends what you are looking for. Everyone
has different needs. I enjoy it and think it is a great step forward
in new directions regarding the whole "PC+radio" concept. I think
it has gone from a "crawl" to a "walk" but don't think it's ready
to "run" yet.

I also recently purchased the competitive product, iCOM's IC-PCR1000.
While iCOM's software is a bit more restrictive and requires more
horsepower, the overall receiver is superior from what I have seen
across HF(especially), VHF and UHF in terms of sensitivity. The
iCOM is definitely more selective and much better at handling
strong signal overload.

As much as Rosetta has done to eliminate computer noise from
entering, it is still there and there's quite a bit of it.
The iCOM does much better since it is not inside the PC but
it has its share of birdies as well but they appear to be
just plain RFI caused internally and not due to the garbage
floating in/around the PC/display.

Either way you go, you'll find yourself working with different
co-ax, antenna and filtering schemes to eliminate as much RFI
as possible to make monitoring more enjoyable. Most of us have
found that a good compromise is to use nice, fat, well-shielded
co-ax connected to an external discone location 20 or more
feet away from the PC.

If you are into programming your own software, WiNRADIO offers
a number of programming methods that are freely available.
iCOM has tried to keep the lid on their protocol but a few
people(especially Mr. Ibelings) have done quite well at

ferreting out the details and making them known.

Of the three magazine and one web review I have seen comparing these two radios, the nod is always given toward the iCOM. This month's coming Monitoring Times will be the next such article which draws comparisions between the two as well.

Best of luck with your decision!

> etc. Thanks

To program a frequency, you need only select the channel, punch
in the frequency and press ENTER. To select a channel, you simply
press MANUAL(to make sure the radio is not scanning), key in the
desired channel # and press MANUAL again.

To program a search, you press MANUAL(to make sure not scanning),
punch in the lower frequency, press LIMIT, punch in the upper
frequency, press LIMIT, press SEARCH. To work properly, I think
the lower and upper frequencies must be contained within the
same band as defined in the manual(29-54, 118-174, 406-512 &
806-912)

Hi all , I've got a couple of Great classic scanners for sale. A Pro 43 200 channel hand held, pre ban, does all you'd expect it to,very nice shape. And a Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use these two any more, I've got enough radios already so best offer takes

each one. low ball offers will be ignored, if you know what these are you know what they're worth.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.

> Without a large investment.........

A dipole mounted in the horizontal plane
is bidirectional. You can make a dipole
cheaply enough. When it's rotated so as to
get the strongest signal, you have established
the line of bearing.

But you won't know which of the two possible
directions is the source. Sometimes, pure
logic will eliminate one direction. That's
about as good as it gets with a dipole.

Depending on the frequency, there are other
antennas that can be made....along the lines
of a dipole, but in yagi-uda configuration.
These are unidirectional.

A TV antenna mounted on a broomstick or something
that can be held away from the body would offer
possibilities.

I guess a lot depends on the frequency, but
in general, there are few cheap *and* easy
solutions. It helps a lot if the scanner has
an S-Meter, but most don't.

It's a downright shame, Jim. You're not alone in getting
ripped. I'm kinda used to it to where it doesn't hurt
so much anymore.

I publish a hard-copy newsletter....and had one brazen
jerkov publicly 'fess that he gets his copy from someone
who xeroxes 'em and sends 'em out.

I've found a number of sites that copied work straight
out of my books and then posted the material under
their own names. Talk about brass balls and steel
lugnuts......

I could go on and on with a list of such atrocities, but
suffice to say I empathize with your predicament. I'm
not sure there is any good solution other than what you
just did....make the matter publicly known. Though if
you could sue the jerk and help yourself to some of his
gainful employment, he and others like him might begin
to understand..... A garnishment of their wages for a
couple of years sure might teach a lesson, eh?

First of all, be careful of the names you include.
You are not entirely correct in the statement. Some
of those people will certainly object to being
categorized with the others.

Secondly, since I apparently have to work for FREE
in order to get any "appreciation", I certainly will do
it in my own way in my own time as I, and I alone,
best see fit. Now if you'd like to PAY ME for every
"useful" post, I believe I could arrange to make you
happy beyond your wildest dreams..... All you and
I need is a bit of a retainer and a contract.....but
lacking the retainer and commitment, I'm afraid I can't
offer any real good solutions to your personal problems.

Thirdly, if you don't like the aforementioned vendettas,
then why don't YOU go to the sources and put a STOP to
them, and if you can't do it by yourself, then enlist
the aid of others. One thing is for sure, my enlightened
friend.....I don't have any vendettas. I am only the
target of them. I absolutely NEVER start the crap. But
when it keeps going and going and going and going.....like
a certain pink bunny, well.....it's my right to have a

say.....and I'll take that right whether you like it or not.

Most notably since you are not contributing to my
dinner plate; education of the kids; and my 401k.

I do thank you and appreciate your most carefully
considered opinion, of course......

At the same time, I am STILL wondering if this newsgroup
can count on ANY useful input from you? You forgot to
address that question in your reply.

hurst_m@hotmail.com wrote:

> Doesn't a half-wave dipole already have an impedence of 75ohms? Why would you
> want to use a TV type (4:1) balun with this setup?

Some sources say a dipole has an input impedance
of 75 ohms, but that is true ONLY under very narrow
conditions of Fo at *certain* heights above ground.

For random heights, the impedance varies widely
from 75 ohms. Also, on either side of the design
center, there are wide swings of impedance.

For a scanner, it would be almost NEVER that a
dipole is placed at the exact height above ground
and operated at the exact design frequency.
A dipole for a scanner is truly your classic
"random" situation where the input Z will
unequivocally always be greater than 75 ohms.

Without getting into writing a book, let me
call your attention to TV antennas which are
known to have 300-ohm input impedance.....why?

Partly to design, of course, but also random
heights and a huge bandwidth.........

Under worst case conditions, a 4:1 mismatch will
have no real impact on the received signal level.
What, a 25% loss, which is -1.25 dB? That's not
a loss that is worthy of any jaundiced eye.

In actual practice, the homemade dipole will exhibit
impedances ranging from 100 ohms on up to 300 ohms,
so the actual case will usually be better than
a 4:1 mismatch.

Lastly, a dipole is a balanced antenna, so there
is a great value in using a balun to match the
antenna to the unbalanced coax....basically the
antenna will do all the work and not the coax...

and the coax will serve its purpose of shielding
and low loss.

Meanwhile, the casual hobbyist has little or no
chance (or desire) of finding a cheap 1:1 or 2:1
balun with a 75-ohm output, so the TV matching
transformers really are a pretty good deal. Everyone
has one laying around, and they DO work great
for the stated purpose.

This isn't "theory"....I've done it and tested and
evaluated the results for years. But you can figure
the math and see for yourself.

Well if you have room inside the scanner that is the best place for
it as it will make for a smaller hole in the back of the scanner, I
believe you could get away with a db9 plug, there has to be some free
relastate in there to drill some holes to mount supports for it.
If you don't want to drill any holes in the scanner remove the
battery holder and mount the battery internal, which means you have to
remove the case to change but that is only once every year or two.
Then make a plate to cover the battery hole and mount your db-9 if
installing the circuit interenal or you could mount the db25 if
installing the circuit in a project box.

I just picked up a Bearcat BC147XLT for 30 bucks (brand new) in a clearance sale, so it seems like a deal no matter what, but I was wondering if anyone had any suggestions on how to improve reception or mod it. The mod I would really like is to increase the range of frequencies available, and to eliminate the frequencies blocked by Uniden. I have electronics training so I am not adverse to soldering or replacing components so send me your mods!

Thanks in advance..

It sounds like they did the modifications described in the various publications by Bill Cheek, all of which are easy to do. The problem with modifications is, even though they themselves are easy, if you break one tiny wire, crack one tiny foil, etc., you can create problems that can be a real pain to chase down. To restore cellular on the PRO43 you have to practically remove every board in the thing, then get them all back together when you're done...so there's plenty of chances to mess something up and not even know it until you have the thing all buttened down.

Although Radio Shack does good work for cheap, DO NOT take it there. Since modifying a scanner for cellphones is "illegal", they are not going to help you. You can't walk in there and say, "Make my cellphone freqs work". I'd be afraid they would confiscate my scanner because of the unauthorized alterations. I wouldn't even take it there for non-cellphone related work.

If you are handy and want to do your own work, RS will sell you the service manual with all the schematics and troubleshooting tables for less than $10. Otherwise, check the ads in magazines or ask around at the next hamfest for a independant tech that will do the work.

I know this info is sketchy, but I hope it gives you some ideas.

Charlie

2717. Ericsson scanning

Newsgroup: rec.radio.scanner
Date: 1998-03-23 00:00:00 UTC
From: com <!>
Message-ID: <6f75k3$gh7@outhouse.sage.net>
Source record: 165948
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

It was once wondered why an Ericsson radio system cannot be easily scanned, like the motorola. The motorola system assigns frequencies to the unit when they request and are granted access. This means that at any time a talk channel can be added to the motorola system without updating the radios. Each Ericsson radio, on the other hand, has a system block which is an association of channel numbers and frequencies. Upon request, the control channel tells the radio to go to a certain channel number. Only the radio knows the association of channel numbers to frequencies. So without the system block or key, it is improbable that an Ericsson/EDACS scanner will be built.

> confiscate an unblocked import scanner?

A very well-travelled friend once suggested to me to buy a cheap, junky scanner (it doesn't even have to work) and pack it right on top of the other stuff in the suitcase where it will be easily found. Then take the "real" scanner and bury it way at the bottom or (if a handheld) stuff it in a shoe.

The plan was for the "decoy" scanner to attract the attention and the customs officer may not look any further once the decoy is found. This also helps when going through questionable areas where valuables are often "confiscated" (ie, stolen) by customs and the local police.

Of course, this may not always work, but it's worth a try. My friend placed a cheap $40 "decoy" shortwave in his suitcase. Sure enough, the foreign customs official took it under the guise of "contraband". He looked no further, and didn't notice the $600 reciever hiding under the dirty laundry. Think of it as a $40 insurance policy.

Peace,
Charlie

There are tons of drugs being smuggled into our country everyday at the borders. I certainly would think that Customs has their priorities straight and concentrates their efforts on the real criminals at the border.

Not to sound rediculous by any means, but maxon, who makes the GE "monogram" radios, makes a dual mode 800 MHz radio that might just be affordable enough to use for "scanning"..... not that i would buy one for that purpose only....

Having read a little about WinRadio's APIs, this seems entirely possible. Using the winradio GUI (the program the looks like a scanner) would be a huge challenge, but all the tools to develop your own simple interface are in the API. In fact, you could run Perl scripts on a web browser running on your win95 pc (like the free sambar server) to send commands to the winradio via webpages. You could even capture the audio output from the winradio to the input on a sound card and setup a 95 based realaudio server.

I haven't heard of anybody doing it, but it's just a matter of somebody spending some time. The tools are all there and all free (except the RealAudio server).

In the great State of Washington, a concerned individual can report suspected incidents of child abuse or neglect without disclosing any information they choose not to. Of course, the more specifics you give, the better. However, you can give give compelling info without disclosing how you obtained it.

The state's investigators will show up at your neighbors door and ask to see the child. The parent can refuse, but then the state will start an investigation. My wife, who works in an allied health field, is required by law to report any thing see hears or sees that seems like child abuse. That would put her in an spot since she cannot, by law, report anonymously.

Yes, Yes, Yes.

Do so anonymously if you feel you must. But, IMHO, doing the right thing is more important than doing the legal butt covering thing. Unless the local PD are a complete pack of morons, they'll be alot more interested in busting the drug pushers than wasting there time with you on some obtuse and obscure federal violation that they've never heard of and couldn't care less about.

Yes, it's an anoying law. But, like a lot of laws, nobody cares unless somebody gets hurt. Especially local law enforcement.

I would think an e-mail message with an unknow address, Hotmail.com would be in order. You could spell out details and the police could use the info from the unidentified source to write a search warrant. The info for the warrant can be from a potential illegal source, like sending a person in to buy dope. The act of buying dope is illegal but can be used. Just a thought, though you need a smart DOPE cop.

--

THIRTY FIVE (35) MILLION EMAILS FOR SALE super low price!

--

More Order Less Cost? Free Advertising for Your Business!!!

Our Fresh Addresses Will Bring You Incredible Results!!!

If you REALLY want to get the word out regarding
your services or products, Bulk Email is the BEST
way to do so, PERIOD! Advertising in newsroups is
good but you're competing with hundreds even THOUSANDS
of other ads. Will your customer's see YOUR ad in the
midst of all the others?

Bulk Email will allow you to DIRECTLY contact your
potential customers. They are much more likely to
take the time to read about what you have to offer
if it was as easy as reading it via email rather
than searching through countless postings in
newsgroups.

There is a secret to effective Bulk Email...HIGH
QUALITY LISTS! There are SO many companies offering
bulk email lists that are months old and it's not
uncommon for HALF of those addresses to be outdated
and undeliverable. Also, most companies offer lists
that they have compiled from addresses extracted from
newsgroups, THE WORST PLACE TO GET ADDRESSES
FROM!

Why? Simple, most people that post messages in news-
groups KNOW that their addresses might be extracted
so they use FAKE addresses resulting in undeliverable
messages.

You can now get FRESH, HIGH QUALITY lists of addresses
that have NOT been extracted from newsgroups! Our lists
are compiled of addresses that we have extracted from
member directories and help forums where you CAN NOT
use fake email addresses! Also, our lists are LESS than
1 month old and are CONSTANTLY updated to remove dupes
and undeliverables!

Our emails can be downloaded at a web site. Our emails are
in text form, one line per email, 164 zip files. This form is
compatible with Pegasus, Eudora, Microsoft email programs,
and many other popular email softwares.

We believe that if you have a great product or service for
everyone, you should let everyone know. Do it cost
effectively today! Sending emails doesn't cost you one
cent! In just one night, millions of people will know
about your company or your corporation. Market your
company by reaching 35,000,000 (thirty five million)
fresh customers for only $35.00!!!!

Our prices are UNBEATABLE! THIRTY FIVE MILLION
EMAILS. TODAY FOR ONLY $35. Not a penny extra.
$1 per million emails or 1 cent per ten thousand's. Isn't it
incredible?

--
World #1 BULK EMAIL SOFTWARE (Email Platinum v3.1)

--

DEMO SOFTWARE AVAILABLE!!!

EMAIL PLATINUM IS ACTUALLY 4 PROGRAMS IN 1:
Email Platinum is amazing new technology and the most
advanced bulk E-mail software on the market today.

(1) EMAIL PLATINUM automatically extracts E-mail
addresses from America Online, Compuserve, Prodigy,
and the other online services, the Internet, web pages,
news groups, and hundreds of other sources.

(2) EMAIL PLATINUM automatically stores the E-mail
addresses in your computer along with keywords that
describe hobbies and interests to created highly targeted
E-mail addresses.

(3) EMAIL PLATINUM sends your marketing letter or ad
to MILLIONS of targeted E-mail addresses at the push of
a single button! (up to 13000 Emails per hour)

(4) You can POST your message to thousands of newsgroups
with just a push of a button.

EMAIL PLATINUM V3.1 New Features:

1. Personalize every email you send. Email Platinum will gather the name of the users in addition to the email address. For example: Your message will start with Dear John.

This feature will create more response to your email which in return means dollars in your pocket!

2. EMAIL PLATINUM will Gather 3 times faster than the original Email Blaster. Now you can gather thousands of email addresses in minutes rather than an hours!!!

3. Randomizes your "from" field. EMAIL PLATINUM will randomize your "from" email address automatically to stop flamers from bombing your email box. For example: If you email 100 letters and you enter in a batch size of 10, your email address will be randomized every 10 emails you send. It will look like this: 10test@test.com 20test@test.com etc.

4. BCC's - EMAIL PLATINUM allows you to check to make sure your mail is getting through your mail servers. This feature will save you time and money!!! If your mail in NOT getting to the recipients you will lose potential business and waist your valuable time. Now with our new feature you will be able to verify every batch of email that is sent.

5. Assign a New POP account: EMAIL PLATINUM allows you to disconnect and reconnect automatically to your mail server every 100-1000 emails sent. This will insure that you have a steady connection while your sending email.

6. SPECIAL CLOAKING DEVICE: EMAIL PLATINUM can successfully hide the origin of all email being sent out. Email Blaster can mask itself to look like it came from the recipients own host. This will help stop users from flaming your email box!

7. SIMPLE TO USE: EMAIL PLATINUM does all the work for you. Unlike other programs where you must cut & paste addresses, E-Mail Blaster does it for you automatically. And, unlike other E-mail programs, with EMAIL PLATINUM there is no need to purchase any additional software

8. SPEED: Your time is important. EMAIL PLATINUM is DRAMATICALLY FASTER at extracting and sending E-mails than all the other programs on the market that we tested it against. The maximum speed is 13000 emails per hour.

9. EMAIL PLATINUM has dozens of special filters
to automatically harvest E-mail addresses from
major online services such as: America OnLine,
Compuserve,Delphi, Genie, and of course the internet.

NO OTHER BULK EMAILERS HAVE THIS FEATURE!

NO SPECIAL EQUIPMENT NEEDED: EMAIL
PLATINUM runs on a PC with Windows 3.xx Windows
95, Windows NT, a 386 or faster processor, 4 MB RAM,
and a hard drive with at least 10 MB free and your
own SLIP or PPP connection. No other software needed.
Also runs on a Macintosh with SoftWindows installed.

Technical support available 24 hours. Emails are updated regularly.

ACTION NOW!!

ORDER FORM

Please fill out the form completely so your order can be processed.
After
payment is processed you will receive our download site address for
email
software (Email Platinum v3.1) and unlocking code, as well as the site

address where you will get your 35 Million Email Addresses. If paid by

check, order will not be processed until the check is cleared by bank.

Are you trying to say that you had a previous ham license to what
you NOW have?

> Entry level John. I said entry level. As in before code free
> licensing, the level that most HAMS got into as their first
> step was Novice. Now, the first level most HAMS get
> into is TECH.

YES! It is now FAR eaiser. Besides everything else I mentioned
in my post, now the questions & answers for the test are available
for anyone to review at any time. In the days prior (about when you
were referencing) the question/answer pools WERE NOT available.

Rather than actually knowing the info, you can simply memorize the
answers. :(

Wrong, Blake. :-/

I know you are a recent newcomer to ham radio (what is it, like the past 5 or 6 years?). In about 1989 (or so) there was a change to the rules for getting a Technician class license. Before that time, you were required to pass element 3 which was a 50 question test. After that time the technican test was element 3A & only 25 questions. Of course, you were still required to already passed you elements 1A & 2 which were the Novice license.

So in summary when I obtained my license for Tech, you were required to pass a 5 wpm test, a 30 question element 2 test, and a 50 question element 3 test. Today a tech license only requires a a 35 question element 2 test & a 30 question element 3A test. 15 questions less & no morse code required. Also at that time you had to PASS IT ALL AT THAT TIME, no credit was given if you passed one element & not the other as is done now. Plus, the tests are offered more frequently in more locations. At that time, the tests (above novice) were ONLY offered a few times a year at FCC locations!

There are some BIG differences in the times you asked about!

As someone who recently did it in reality, I can say in my experience
the police were much more interested in the crime than my scanning.
Although my situation had to do with drugs, they didn't at all seemed
concerned with how I knew what I was telling them. In fact, they in
not so many words told me to keep listening to help them. As far as
suing as someone pointed out, that is false. They can't use your
information to arrest. They can use it to start their own
investigation, and THEN make an arrest. I am now, however, taking
notes and am going to mail them an anonymous letter with names, pagers
numbers, addresses from now on. For two reasons, I'm sure the calls
are taped, and when dealing with drug dealers, one doesn't want them
to know the narc. And, when all is said and done, I really don't want
them coming back at me about it. I doubt they will because as I said,
they definitely didn't tell me to stop monitoring the calls, but
better safe than sorry. In your case, I would make the call. No
child should go on being abused, and I think the police will
appreciate the tip more than how you came upon it. If you're worried,
do it anonymously.

I suspect that the FCC would like to see
scanning made illegal. I believe that the
bastard in Louisiana who caused all of our
current problems is probably working to
incrementally outlaw scanning.

Face it people......You probably did nothing to help keep our hobby
alive when everyone was passing around the congressional phone and fax
numbers. So, the result is that your hobby will be outlawed over a
period of time. You probably have just became a criminal because you
own an outlawed scanner.
Just sit on your ass, complain and cry. Keep doing nothing and it will
all go away.

Funny! How will the feds know when you pro scanner owners did the mods
to your scanners that are now 8 to 10 years old???? So, there seems to
be a gray area here that allows the feds/cops/fcc to bust your ass even
if you modified your Pro???? scanner in 1988!
HAHA! I love it! Remember the shitheads here who were saying that the
nut in Louisiana had modified his bill and was trying to work with
scanner hobbiests??? What a laugh! Remember that those same fools were
saying that you should not be upset about what the politician in
Louisiana was doing???
So, the next time some politician tries to remove some of your freedom,
if you relax and listen to the fools who say that you should just sit
back and be quiet, youll be so sorry you did!
Make some noise!

Because it is worth doing.

Because we alledgedly live in a democracy.

Because this will completely gut the Communications Act of 1934.

> The cordless & cell phones that are supposedly scanner proof?
> Best joke I've heard in years.

Do yourself some favors:

1) Learn the difference between digital modulation, scrambling, and
encryption.

2) Do an alta-vista search for PGP-phone to see what (wired) voice
encryption is.

3) As a friend in DOD work or the military to give a brief description
of what a STU is.

2757. Does DSP makes any significant difference?

Newsgroup: rec.radio.scanner
Date: 1998-03-23 00:00:00 UTC
From: segun_owodunni@yahoo.com
Message-ID: <6f5fnn$kb4$1@nnrp1.dejanews.com>
Source record: 166009

I know producers push this DSP stuff, just to move their products. I have a NRD 525, which does not have DSP on it, I'm thinking of upgrading to FT1000-MP , not only for DSP only, but it's oe of the major reasons, because FT1000-MP's got what the producers call Enhanced DSP.

My beef is with all this DSP and EDSP stuff, can someone clarify the cost-benefit for forking out in excess of 10,000 dollars just for EDSP.

Producers may not respond

Entry level John. I said entry level. As in before code free
licensing, the level that most HAMS got into as their first
step was Novice. Now, the first level most HAMS get
into is TECH.

The entry level, as I stated, was not as tough technically as
the Tech level is now. (Which, does not mean much, as
todays licensing technical standards, as they have for
quite a bit of time, even before the code free licensing, is
just memorization for most people)

Are you buying, selling or taking up space "PAL", if I wanted HK
dollars I would send it there to be sold. You obviously don't know
much about radios. This is nothing like the AOR-8000. Your limited
level of intelligence is evident by your stupid comments. Find
something useful to do with your life besides spending your welfare
money to surf the newsgroups because you can't afford any of this
stuff anyway.

From: gregg@plains.nodak.edu
Message-ID: <6f5spr$u0m$2@node2.nodak.edu>
Source record: 166018

I have an Icom PCR-1000 scanning receiver for sale. This is the little black box rx that does all modes and practically dc to blue light. It skips cell freqs, but pretty much covers everything else. I have the latest software off the Icom web page. It is like new, with all cables, box manuals, etc.

I've run it through it's paces, and I think it is a great little radio. I find I miss the "real" radio more than I enjoy the "virtual" radio interface.

I'll sell for $475 shipped. Save a few bucks, get a like new radio, save the shipping.

From: gregg@plains.nodak.edu
Message-ID: <6f5ta7$u0m$3@node2.nodak.edu>
Source record: 166019

I have a two week old Relm 200, 200 channel mobile scanner for sale. It has alphanumeric display, ctcss, dcs decode, 800mhz less cell coverage and 100channels per second speed plus includes programming software. It has a tremendously sensitive rx, great for mobile applications. You can switch from freq display to label display with a push of a button. It has 10 banks of 20 channels, with lots of features and is ruggedly built, including a metal case. I have the box, manual, and everything that comes with it. Many of the accessories have never been taken out of the box, as I have plenty of power supplies, for example.

I paid $220, will sell for $200 plus shipping.

Get one from RadioShack for the Pro2038, it's the same radio with the RS label, and same schematic applies. RS sells them for about $10.

What do you need to find? I recently added a discriminator tap to it (15 minutes).

BTW, did you know that if you removed the BC700 front assembly and replaced it with that of the BC350 and configure the resistors per the cell mod for the BC700 the unit will scan the 800Mhz band unblocked? Seems even though Uniden ROM-blocked the BC700's, the 350's still used the OLD chip. Adding the missing resistor to the CPU mode pads enabled the 350's controller to scan the 800Mhz band. The 350's don't have the 800Mhz module installed but the pins and interface components are their. I did this for a friend last year.

Andy

Making "moonshine" in one's home has been legal for some time now.
In fact most states have stores, called "home brew centers", that
will sell you everything you need to get started.

I am interested in trading for a scanner with 27MHz and cell freqs.
Preferably a mobil unit but not necessary. Will trade President Jackson
-OR- RCI 2950 (both good talkers).

2788. Help! Pro 43 Broken

Newsgroup: rec.radio.scanner
Date: 1998-03-23 00:00:00 UTC
From: RHUNT <RHUNT@prodigy.net>
Message-ID: <3516A151.3775@prodigy.net>
Source record: 166040
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I purchased a Realistic Pro43 (date code 8A2) from a pawn shop last
week. Thought I was getting a good deal. However, it appears that
someone made the following mods: opened cell freqs., extended frequency,
and audio modification. The scanner appears to work OK on the VHF and
UHF spectrum, scans the 800 - 900Mhz but won't recieve cell calls. It
does recieve a local TV station (garbled) at various freqs in the cell
range.
Anyone have any ideas as to what is wrong, or where I can send it to get
it repaired? Any help will be appreciated.
Thanks
Richard

YES! It is now FAR eaiser. Besides everything else I mentioned
in my post, now the questions & answers for the test are available
for anyone to review at any time. In the days prior (about when you
were referencing) the question/answer pools WERE NOT available.

Rather than actually knowing the info, you can simply memorize the
answers. :(

At those prices, no. But DSP, in large production runs, is much
less expensive than hard wired boards. I have telephone switching
circuits done in DSP that are even cheaper to produce in mass than
op amp filter (RC) circuits. Different tones are loaded into data
tables, no adjustments needed (that is most of the cost savings).

Here is the story, as of 12.15pm PST...God help them all....

Mike Dutra EMT-P
Pleasanton, CA

LOS ANGELES, Updated 12:15 p.m.
March 23, 1998 -- A Los Angeles City Fire Department air ambulance crashed in a residential neighborhood near Griffith Park this morning, killing four people and injuringtwo others, authorities said.

The helicopter, carrying six people as it attempted to rush a young car wreck victim to
a local hospital, went down around 7:40 a.m. near the Los Feliz area of Los Angeles.
"There are four deceased," Deputy Fire Chief Davis Parsons told reporters at a news
conference at little over two hours after the crash.
Killed in the accident were a 10-year-old girl and three of her rescuers. They have been identified as two fire department paramedics and a crew member from the air ambulance, said CBS 2 News. The survivors have been identified as city fire department personnel. The two, apparently the heliocopter's pilot and a crew member, have been taken to an area hospital and are in serious but stable condition with multiple broken bones and head injuries, Parsons said.
The helicopter was transporting the 10-year-old girl to a local hospital when it went down, said CBS 2 News. The child had been critically injured in an earlier traffic accident in Sun Valley involving a car and a dump truck. All of the deaths and injuries were to people
on board the helicopter, said CBS 2 News. No one on the ground was hurt.

The helicopter crashed on its side, its tail breaking off. Pictures from the scene show small pieces of debris scattered nearby. Authorities found part of the helicopter's tail rotor about a mile from the crash scene, said CBS 2 News.
The helicopter went down just south of Griffith Park in a residential neighborhood near Fern Dell Place and Red Oak Drive. It clipped a couple of trees but missed nearby homes and vehicles.
The cause of the accident is unknown. The crash is being investigated by the National
Transportation Safety Board and the Federal Aviation Administration.
Los Angeles Mayor Richard Riordan visited the crash scene this morning, offering support for firefighters and the families of those killed. "I ask all Angelenos to say a prayer for those that died and those that were injured," Riordan said, reports CBS 2 News.

Today's tragedy follows the March 8 death of city fire Capt. Joseph Dupee, 38, who died after being trapped in a building fire. Dupee was the first city firefighter killed in the line of duty since 1984.

In article <6f4k1m$5qv$1@news10.ispnews.com>, "Jim Weidner"
<weidner@kwiknet.net> writes:

>Suppose I am able to hear my neighbor's babysitting monitor on 49 MHz or/and
>their cordless fone on 46 MHz and I hear them abusing their infant? If I
>report it (as required, I believe, by my state's laws), am I in violation of
>Federal privacy laws.

I had a similar, real life experience several years ago.

A new neighbor moves in next door. Comes over and introduces himself, seems like a nice guy. During the day, no activity next door; starting at dark, lots of cars coming and going. While monitoring one night, my scanner locks onto his cordless phone frequency. Before I could hit the lock out button ;) I hear a drug deal being made. A few drug deals later he makes a deal for some guns. Now I have a real problem. I need to turn him in, but both my kids bedrooms are at the front of the house. The last thing I need is a drive by shooting. While down at the courthouse one day I talked to a sheriff's deputy. I gave him frequency, phone number, license number, and anything else I could think of. He told me he would have it checked out, but a month later there is still deals being made. It's kind of weird trying to be nice to neighbor when you know he's a drug/gun dealer. Fortunately, he moved out around midnight one night on the last day of a month (rent probably came due) and the problem became some one else's. The next week I put my house on the market, sold it and got the heck out of there!

Question to the law enforcement folks: How should I have handled this?
When I told this story a couple of years later to a guy who works in the IRS enforcement division (the guys who kick the doors down) said they (the IRS) would have set up a monitoring station and busted the guy. (BTW, you should see THEIR monitoring equipment.) I never saw a car in the neighborhood that looked like it was monitoring anything (maybe that's good), maybe my neighbor caught wind of the authorities and moved out ahead of their raid.

The whole incident lasted about three months, I was glad when it was over.

That is hard to estimate, but I don't think
any of "us" on the newsgroup have heard of it
ever happening. Not with scanners, anyway....

CB Radios and related contraband, yes, it
used to happen all the time. I don't know
about anymore.......

I had the same problem.
Disconnect CTS (pin 5 on 25, or pin 8 on 9 pin) between the trunker data
slicer, and the OS456.

Ferderal "privacy" laws would prevent any evidence from cordless phones from being used in court, so there would be little point in reporting this matter directly to the police. However, you could make an "anonymous" tip or simply call the police and say you are very suspicious of illegal activity (in this case, child abuse).

> > > from 75 ohms. Also, on either side of the design
> > > center, there are wide swings of impedance.

The ARRL antenna book claims a dipole above the ground will usually have a lower impendence than 75 ohms, not higher. BTW, does an off-center dipole have wider bandwidth than a regular one? If so, does it have lower gain on its design frequency? How far off-center would be good?
> >
> > I
> Now there's a good idea I guess it's no more difficult
> to whup up one of those than a standard dipole. Might
> even be easier to mount and keep mounted. Good idea!

If the ground an other nearby objects can raise the impendence of a 75 ohm dipole, wouldn't they also raise the impedence of a folded dipole above 300ohms? BTW, which has the best bandwidth: an off-center dipole, a folded dipole, or a ground plane?

>a full blown top drawer public safety portable, needs to be externally
Geez.

Let's look at the misinformation in your post one thing at
a time.

First off, the Astro is either a Portable, or a Mobile. Depends on
whether you have a Astro Portable, or a Astro Mobile!

>programmed by SOMEONE ELSE (lessin' ya'll got the software key)
Although yes, it has to be programmed, you DO NOT NEED A
SOFTWARE KEY. You do need Motorola software, and a programming
cable, and of course, a RIB. The only time you will need a software
key is when you program a trunking system into it.

>and will do a wonderful job of listening to digital audio until they
>encryption
>key is changed.

Many systems out there use just plain old Digital. No encryption, and
therefore, keyloader needed.

DVP/DES is when you will need a keyloader.

>But then, so will my Soundblaster Awe64. Or so I'm told.

Extensive Test!? Me and Drew didn't have to take no "extensive test".
We just bought us a book at Radio Shack that had all the test questions in it,
read it through that night and took and passed the test next day.

Sadly, I found that the bands were full of old fart hams who were always
talking about their gall bladders and stuff - which is why I enjoy CB much more
- where the real non-phony people hang out. Even if us can't spell at least we
has fun.

>Now count mine. Do a ratio or whatever simple math
>it takes. Then you will see the fallacy in your
>statement. I rest my case........

The real fallacy here is that if one posts some on-topic stuff about scanners, that gives one the liberty to be an asshole the rest of the time. I think most anyone can spot the gigantic hole in this line of "logic."

>No matter HOW you stack the deck in favor
>of one way or the other, you WILL find a goodly
>number of on-topic, caring, detailed posts
>from me. You would find even MORE if people

And you will find an even larger number of, shall we say charitably, "off-topic" posts by you. How the first justifies the second is unclear.

>like you....with whom I *had* no quarrel, would
>simply speak the truth in their criticism, if
>there just has to be some. But more succinctly,
>if YOU stayed ON-TOPIC, that would be one less
>cause for me to drift......

Shifting the blame to others does not relieve you of responsibility for what you post.

>But did it ever occur to you that a QUESTION can
>be every bit as valuable as an ANSWER? I try
>to answer bona-fide questions in this forum. If
>you are not satisfied with the content here,
>then WHY DON'T YOU (and people like you) ASK QUESTIONS?

OK...

Why do you feel that it's incumbent upon you to answer every critical post with ever-escalating profane flame-bait?

>That certainly is one way to gently and persuasively
>steer a forum onto the topic for which it is suited.
>And it is a method that YOU can employ ANYTIME
>you wish.

And at least one person who politely posted to you was flamed by you
without provocation.

>Think about it. Because as is, your 0:1 record
>says nothing constructive either. You're throwing
>stones in a glass house, my friend! You can criticize
>me all you want, but it would behoove you to first
>put your own house in order.

According to whose rules, Mr. Bill? Since the guy, by your own count,
has only posted this one post here, he has no "house" to put in order.
A reasonable person might well ask why you don't see fit to follow
your own advice in this matter. As I've mentioned before, you could
do worse than to follow the example of Parnass, who posts signal with
ZERO noise in this forum, and draws NO flames or off-topic responses
with his contributions.

I seem to recall a similar situation in an old edition of PoliceCall. From a legal stand point the parents would have every right to name you in a law suit, and because the reason for the police taking action would be solely due to your information, any charges against the parents would be dissmised, if it ever made it to court. My advice would be to examine the kids the next time you see them, if you see ANYTHING wrong or weird report injuries or bruises or burns instead of what you heard, you can then neglect to mention your motivation for a close examination if you are ever asked. This way you avoid all the legal issues of scanning AND ensure that you were listening and reporting on the correct parents.

John

2862. Thank you Casey Throwup for a very enjoyable weekend

The Thruway has it's own UHF repeater based radio network using two
frequencies that alternate as you travel along the Thruway. The state
police also makes use of the VHF frequencies for interagency stuff as
well as coordination with the various troops along the way. Here's what
to listen for:

453.425 - Thruway State Police & Maintenance
453.525 - Thruway State Police & Maintenance
154.665 - State Police car-to-car (monitor this one for speed traps)
154.695 - State Police broadcasts
155.370 - New York Police Intersystem

You may also want to tune in the local state police troops for the fun
of it.

> poster was interested in 40-50MHz.

Right. And even though 30 MHz is the "defined" end of HF
and beginning of VHF, the VHF-Lo band shares characteristics
of both HF and VHF. After all, 45 MHz would be 6.7 meters
or about 22-ft for one wavelength and 44-ft for two. Most
dipoles at the hobby shack would be mounted in that range.

Real "ify" if you ask me. Very uncertain, at best. But
even so....worst case mismatch is 4:1 which really isn't
of any impact to a receive-only system.

> My only concern would be the polarization of his dipole.
> It would probably be a good idea to mount it vertically.

Yeah, I think I mentioned that to 'im. I can't see a
horizontal application unless the limits of his range
were pretty close in and no need for fringe reception.
Then polarization might not matter.

> It's possible that if it were mounted close to the tower
> that the impedance would be reduced somewhat.

If the tower or mast were grounded, it could do one thing,
and if it were floating, it could do another. Too many
variables for us to try to deal with it here.

> > Partly to design, of course, but also random
> > heights and a huge bandwidth.....

> There's the key right there. The bandwidth.

Yeah, he mentioned 10 MHz, which is pretty broad
for a dipole. It'll work all right, but there is
no nitpicking the performance over that spectrum.
It's gonna have "lumps", "bumps", and "dips" all
across that band.

> > In actual practice, the homemade dipole will exhibit
> > impedances ranging from 100 ohms on up to 300 ohms,

Now there's a good idea I guess it's no more difficult
to whup up one of those than a standard dipole. Might
even be easier to mount and keep mounted. Good idea!

2869. Police Scanners for sale, Pro 43 and 2005

Newsgroup: rec.radio.scanner
Date: 1998-03-23 00:00:00 UTC
From: tglunz@#cybernw.com
Message-ID: <3517fcb5.1706154@207.126.101.101>
Source record: 166140

Hi all , I've got a couple of Great classic scanners for sale. A Pro 43 200 channel hand held, pre ban, does all you'd expect it to,very nice shape. And a Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use these two any more, I've got enough radios already so best offer takes

each one. low ball offers will be ignored, if you know what these are you know what they're worth.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
Thanks Terry tglunz@cnnw.net

What on earth would you want to do that for?

Reminds me of the little fad that went around
a few years ago....fake cellular antennas so's
the neighbors would think you had a real cell phone.

> Or, because of the way the electonics are configured on
> a motherboard, it is isn't possble to do so?

Huh? See if you can rephrase that question. At
least, I don't follow you,

Back to the first question, you can download the
latest WINRADIO software from their Web site at:

http://www.winradio.com

and if you don't have a WiNRADiO in the PC, then
the software will revert to demo mode, which is
exactly what you asked for the first paragraph.

>Regards,
>Knut Otterbeck

The PROgramit and OS535 will both work nicely inside of a Pro-2035 or Pro-2042...infact there is a added benefit if you have the OS535 installed. You can tap off of the DB9 connector of the OS535 to operate a serial PROgramit interface. The OS535 resides above the RF/Linear PCB and the PROgramit has tons of room (and is easier to install) in the lower half. The heat/current issue isn't anything to worry about. I would suggest to install a seperate +5V regulator for the PROgramit.

2873. Discriminator Question - Pro 2006

Newsgroup: rec.radio.scanner
Date: 1998-03-23 00:00:00 UTC
From: Don Stegner <dstegner@erols.com>
Message-ID: <6f515rbif1@winter.news.erols.com>
Source record: 166144
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have tapped the discriminator output on my PRO-2006 / OS456. It works great for Trunker unless I attach the computer cable to the OS456. The cable seems to short out the discriminator. Also, if I attach an external antenna the 2006 and have the scanner (895XLT) that trunker is tuning also attached to the same antenna, the discriminator shorts out. Any ideas on how to fix this? Thanks.

Due to overabundance of projects I am selling the following items:

Kenwood R-2000. This BC-30MHz shortwave receiver is in excellent condition. Comes with manual. $300 plus shipping.

Bearcat BC760XLT, pre-ban model. This scanner radio is in excellent condition. Comes with antenna, charger, and copy of manual. $125 plus shipping.

* Hallicrafters SX-104. This 30-50MHz boatanchor receiver is in excellent cosmetic condition and good working condition. $75 plus shipping.

* Hallicrafters SX-105. This 152-173 MHz boatanchor receiver is also in excellent cosmetic condition and good working condition. $75 plus shipping.

* Special deal - take the pair for $125 plus shipping. (Sale pending)

Realistic DX-75. This GC boatanchor receiver is in very good-excellent cosmetic condition and good working condition. Includes an original (NOT a reproduction) instruction book. This is when Radio Shack was still Radio Shack, and not a Tandy division. $50 plus shipping. (Sale pending)

DenTron MT-2000A Antenna Tuner. 3kW PEP antenna tuner. This unit is in good cosmetic and working condition. $125 plus shipping.

Cobra 148GTL-DX CB transceiver. Excellent condition, including all original documentation and box. $250 plus shipping.

Marko 10-40M mobile linear. 75W, AM/SSB. Condition unknown. Take a chance? $25 plus shipping.

I need to get out of the radio business, so I would prefer outright sale to trades. Delivery possible in north Texas, eastern Oklahoma, or northwest Arkansas. If interested, or for more information, email me at twhite@cyberramp.net. Thank you.

>thought, though you need a smart DOPE cop.

Most States have specific statutes that allow persons under the immediate direction of law enforcement to purchase controlled substances for legitimate enforcement purposes. That's why it's not illegal for a "snitch" to purchase drugs. Note that it has to be under the immediate control of the investigator. Since there is no similar exception in the ECPA, there is a real chance that the information received could be suppressed by the Courts.

That said, most law enforcement officers would at least like the tip, even if you can't say exactly how you know. It could at least be the starting point for the investigation of some unknown dealer, or help out an ongoing one.

Not true,

If you can figure out the LCN (Logical Channel numbers) then your are home free.

I am currently scanning 3 EDACS systems without any problem in the DFW area using etrunk.exe. This software works just like trunker, except it is built for usage on EDACS systems. I am currently alpha testing it for the developer before it goes into beta production. Watch http://web2.airmail.net/lblant1/dfw/digital.htm for news etc.

It takes the discriminator output from one scanner monitoring the data channel and drives another. All I had to do was figure out the LCNs for the systems, and it was all downhill from there.

Is there an atomic clock/radio that you can listen to the WWVB signal on? Or a way to modify them to do this.. im am talking about the ones they sell at radio trash and wal-mart.
If not, where can i get a cheap receiver just for this purpose or plans to build one?
Any help appreciated... thanks

> tdragonn@blarg.net

This is all explained in Bill Cheek's Scanner Modification Handbooks.
Basicly, there are two types of memory in scanners.
Many use a 2KX8 static RAM chip. To expand this system you replace the RAM chip with a bigger one and using switches to control the added adderss lines.
The other memory is a serially interfaced arrangement wherein the address and data travel on one lead. Some of these memories have a chip-select lead.
With these, you parallel an identical chip, connecting all leads but the chip select. The select leads are switched, one at a time, to the scanner.
If there's no chip select, the data line is switched. Cheek published info about the serial RAM systems in an issue of World Scanner Report.
Contact him at bcheek@san.rr.com

> tdragonn@blarg.net

Amendment to my previous post: Some scanners don't have a RAM chip. All
the memory is in the processor chip. These you can't expand.

An off-center dipole is similar to a standard dipole only it's abt 1/3
and 2/3 of the half wave lenght instead of 50/50 like the normal dipole.

It's rez on the main freq and ODD multiples of that (instead of even)

> Anyone have a clue what the chances are of having customs find and
> confiscate an unblocked import scanner purchased from another country

If you are traveling, take it out of the box (mail it home). It is
just a radio that you use. Customs is looking for drugs, guns, alcohol,
illegal plants. Radios are not on the high list. Of course, if
purchased oversees, they do want the tax!

If mailed into the country, have the custom form list it as a
shortwave radio, not a scanner.

These are just my thoughts, having deal with customs (legally).
I have not tested this but again radios are not the big targets
they are looking for.

2914. 800 trunked to go digital?

Newsgroup: rec.radio.scanner
Date: 1998-03-24 00:00:00 UTC
From: emoney250@aol.com
Message-ID: <1998032406510001.BAA13155@ladder01.news.aol.com>
Source record: 165899

My local police dept. has a trunked system. Except for the last week, everyday at about 11 p.m. or so the 'data' channel would change between one of three frequencies. As I said, for the last week, the 'data' channel has not moved, but the scanning has not yet been affected. Is this the first stages of a trunked system preparing to go digital or what? Please give me some educated/experienced input.

hurst_m@hotmail.com wrote:

> The ARRL antenna book claims a dipole above the ground will usually have a
> lower impendence than 75 ohms, not higher.

Well, yes, it does kind of suggest that, but that
is also for Fo. When you move off freq, and change
the relationship to ground, some very complex things
can happen, starting with impedances..... Operating
far from Fo is not in the realm of most ham applications,
so the ARRL books don't really dwell there.

Scanners operate everywhere, though, and the reference
answers are not always easily dig out. A lot of the
time, you have to go by experience and empirical results.

> BTW, does an off-center dipole
> have wider bandwidth than a regular one?

I think so, but probably because I have built a lot
of OCFD's and they do seem to cover a wide spectrum,
thanks to multiple resonances with overlap. I've not
ever messed with folded dipoles other than on paper.
And paper is only so good.......

> If so, does it have lower gain on
> its design frequency? How far off-center would be good?

Well, yes, my studies suggest lots of gain peaks with
steep roll-offs to near unity, and also some negative
gain "valleys". But the thing is, the farther you go
off of one center, the closer you get to the next center,
so overall, it's pretty widebanded with 0-dBi or better gain.

> If the ground an other nearby objects can raise the impendence of a 75 ohm
> dipole, wouldn't they also raise the impedence of a folded dipole above
> 300ohms?

That, I don't know. Maybe Andy knows. I vaguely
recall that a folded dipole is less ground dependent,
but I might be remembering something else.

> BTW, which has the best bandwidth: an off-center dipole, a folded
> dipole, or a ground plane?

Well, a ground-plane shares many characteristics of a dipole. Both are relatively narrow-banded, give or take maybe 5% of Fo. So the OCFD would shine in the bandwidth department, and still have some gain.

Dipoles have a 2.15-dBi gain; 1/4-wave groundplanes can go to 3-dBi or so; while half-wave groundplanes can hit 4-dBi. And 5/8-wave groundplanes can nudge over 5-dBi. But as is always the case, the greater the gain, the narrower the bandwidth. There are exceptions (log-periodics, etc), but not much in the omnidirectional realm.

On 21 Mar 1998 08:17:59 GMT,
in the newsgroup rec.radio.scanner,
"Wild Bill" <kwag98@tcis.net>
from Toolcity Internet Services thoughtfully posted:

> hi.. i've been trying to locate a manufacturer of, or substitute for a
> 2SD1676 transistor used in a portable scanner radio as an audio driver (i
> think). I don't know the pin basing (EBC-CBE) since the device is open.
> It's packaged as a SP-92, but space would permit the use of a TO-92.. if i
> could find the specifications for it.
> Suggestions of places that i might look online will be appreciated

2SD1676 NPN Silicon with internal base resistor network.

Pinout:

Looking at the front (flat-side w/lettering), leads down:

E C B (typical Japanese pinout)

Specs:

Primary Mfgr: Hitachi
Vcbeo 20V
Ic 0.6A
Pc 0.3W
hFE 60 min @ Vce 5V/0.01A
Vce sat 0.04V @ Ic 0.01A
ton 300nSec
toff 700nSec

This transistor has built-in resistor network on the base. A 6.8K
between the "base" pin and the actual transistor base, and 6.8K
from the actual transistor base to emitter. These transistors are
very common in mute and logic circuits.

MCM has `em. $0.31 each. $20 minimum or $5.00.

www.mcmelectronics.com

It has a pretty good Vsat, but otherwise looks like a generic
2N3904 type. You could use almost any NPN transistor, but you
will need to add the resistors externally.

Here are a few Manufacturers that are heavily into Transistors:

http://design-net.com/cgi-bin/dlsrch
http://www.toshiba.com/taec/nonflash/indexproducts.html
http://www.semiconductors.philips.com/designerindex/
http://www.semic.sanyo.co.jp/english/catalog/index-e.html
http://www.st.com/stonline/books/index.htm
http://www.zetex.com/guides.htm
http://www.elisnet.or.jp/ROHM/
http://www.temic.com/www/menus/products.htm
http://www.ti.com/sc/docs/eedesign.htm
http://www.fairchildsemi.com/catalog/

Toshiba has a good selection of the 2sa/b/c/d/k series.

And to an extent:

http://www.diodes.com/
http://www.gensemi.com/products/products.htm

This site below has a few "Japanese" transistor (2SA/B/C/D/K...)
datasheets, but it is VERY slow! And on top of that, the
"datasheets" are scanned and stored as un-compressed Windows BMP
format files (~500K/page). Download the files to disk first, then
view them.

http://www.microelectr.com.hk/DATASheet/TRANSISTOR

The "NTE" replacements page can sometimes give you a start:

http://www.nteinc.com/Web_pgs/Prodindex.html

A Complete list of Manufacturers sites is available at:

http://www.scruz.net/~gcreager/brief.htm

> the decoding features of the full version are worth the extra $100.

If you have to ask then I would say, probably not...but...

> Should I save the $$ and use wintone2, or go for the better one?

if you are really going to use the CTCSS, DCS and DTMF features
then it would be better to get the "full" package that does the
whole enchilada instead of trying to manage multiple entities.

> Does it work better then wintone2 at decoding dtmf,dpl and ctcss, I
> sure hope so...

It's built right in...no muss...no fuss.

Good luck!

>
>
Actually this is partially correct. There is a channel/frequency
mapping inside the radio but it is the same for ALL radios. Once you
figure out the mapping (ie, channel 1 is 856.9875, channel 2 is
857.9875, etc) then you have it made. And I have found most of the
time the channels are mapped in frequency ascending order.

There is software already on the net that follows EDACS and can be
easily ported to the firmware of a scanner. The scanner manufacturers
need to know how YOU feel so give them a call and ask for an EDACs
trunking capable scanner!

Message-ID: <6f8ifs$1e8@bgtnsc02.worldnet.att.net>
Source record: 165912
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap,rec.radio.shortwave

Obviously Mr. Owodunni does not know the value of radio equipment. It could be an honest mistake with him confusing the 3000A with the 3000, or is it simply a malicious attempt by him to play price police because of his ignorance and lack of funds to ever buy anything on this newsgroup other than a pack of batteries.

In any event, those of you who know radios, know full well that an AOR-3000A can still be had (blocked) at a brand new price of $1199. Therefore, an unblocked used 3000A should warrant an asking price of $800. I'm further encouraged by the fact that I've received several e-mails from you folks on this newsgroup that $800 is a fair asking price for this fine rig.

So, I hereby ask all of you to please join me in relaying an appropriate message to Mr. Owodunni that his unsolicited comments are upappreciated, and of course, ignore his additions to any adverts posted on this newsgroup. Remember, he could do the same to you one day. Thank you and have a nice day.

MR. OWODUNNI, AS I INDICATED, THE CHOICE OF LANGUAGE YOU USED IN A PERSONNEL E-MAIL MESSAGE TO ME IS INDICATIVE OF YOUR LIMITED INTELLIGENCE. PLEASE TAKE THIS AS A STERN SUGGESTION TO "GO AWAY." ITS "HIGH MAINTENANCE" INDIVIDUALS LIKE YOUSELF THAT DRAIN THE RESOURCES OF OUR SOCIAL AND PUBLIC SERVICE SYSTEMS. HAVE A GOOD DAY.

Besides, local LEOs do not really want to enforce federal
laws. Local government has a real burr up their ass about
the Feds passing that mandate local enforcement, especially
when there is no money to back it up. It is a turf thing.
Now watch out if the Feds start giving money to enforce this!!

Having gone thru customs checks at airports, they are looking for drugs, plants (and bugs on them), food items, alcohol, and anything you have not paid the import taxes on. The real secret to knowing what the Feds are after: what are they spending money at the local level for. And right now, it is not enforcement of the scanner laws!

Take the radio out of the box, use for a few weeks and tell the guy you brought from home. Mail the box back. If you are importing by mail, have the customs form say it is a shortwave receive (especially if it does receive those bands). Don't make a big deal out of it.

God, stupid laws are making crooks out of all of us!!!

If the local TV station is channel 20 and it appears at 3.2 MHz intervals, it's a known problem. The signal enters through the case and mixes with the second local oscillator. This is an artifact of the PRO-43 design and has nothing to do with the cell mod. It probably also occurs throughout other bands but you noticed it where you weren't receiving anything else.

To narrow the question about the mod, search the cell range (869-894) with squelch turned down and confirm the 30 kHz step. If it steps at 12.5 kHz, the wrong diode was removed. Search 54-88 MHz for the audio of local TV stations chs 2-6 to confirm that the extended receive diode was installed correctly. Compare the general sensitivity with a good handheld to see if the previous owner properly reconnected the antenna lead (it's not necessary to unsolder the antenna or disassemble all the boards, but the most common instructions do things the hard way).

Odds are the previous owner blew the mod, which might account for it being unclaimed at a pawnshop. If all the normal functions work, it's still a good radio. The Ch 20 problem is only a minor annoyance (unless it occurs on top of a frequency you really want to hear).

It's in the MCM catalog.

There's several nationwide distributors that specialize in repair parts
like MCM, Dalbani, Premium Parts and others. They carry a selection of
original numbered japanese and other foreign (to the USA) parts.

For contact information, check out the sci.electronics.repair faq on
http://www.repairfaq.org which has a page on these outfits in there
somewhere.

I'm afraid dear friends and radioheads, the real problem with Mr. BCheeks has NOTHING to do with age (an obvious point), but rather is a real issue of untreated dysfunctional behaviour. I have never seen a finer example of a sicko using the "blame game", rationalization, justification, scapegoating, along with an arm length list of OBVIOUS dysfunctional behavior.

Rather than berate the poor sap, maybe we should all kick in to assist him with paying for the professional counseling he SO DESPERATELY NEEDS. And to be sure, I think he knows it.

Deep down inside, a child crys for attention, EVERY TIME A PERSON POSTS!

We love you Bill, in our own "tough love" kind of way, PLEASE GET HELP!

>Cheeks could learn a great deal from him,
>(the reputable Bob Parness) but it won't happen.
>Too much kid in him still. As old as he is, this is unlikely to >change.

Isn't legal language wonderful??? IMHO it is vague enough that charges
could be filed, if there was a compelling reason to. In Canada our
communications agency is so under funded, and over worked they can only
respond to a serious occurance (like someone causing interference to
law enforcement or ATC...) Yes the law exists, buried deep within the
Criminal Code of Canada, and the Radiotelecommunications Act. But owning
a cell capable scanner is legal, as long as it can recieve other frequencies
ie; weather, marine ham et al. So if the scanner is full spectrum there

really a problem. If the device only recieved cell it may be illegal.

I have an excellent (brand new condition) M-400 that I have no need
for, which I acquired as part of a package deal. It comes with the
AC adaptor and original manual. The unit has no scratches, nicks or
dents. The unit currently sells for $399 new, I would like to sell
it for $150 shipped, or best offer.

Here are some basics from the original owners manual:

Shortwave reception modes include:

* baudot 45, 50, 57, 75 and 100 baud.
* ASCII 75, 100 adn 150 baud.
* SITOR A & B automatically selected by AUTOR.
* FEC-A 96 and 144 baud.
* SWED-ARQ S, M and L lengths.
* FAX (to printer port) 120 LPM 576 IOC

For VHF/UHF enthusiasts, the following capabilities are featured:

* ACARS Aviation message/telemetry mode.
* POCSAG Digital pager mode.
* GOLAY Digital pager mode.
* CTCSS (PL) Decoding 41 standard codes.
* DCS (DPL) Decoding 104 standard codes.
* DTMF Decoding 16 digits.

Stark I read the text on this page and I believe that you may not have fully understood certain parts of this code.

Quote "

"private communication" means any oral communication, or any telecommunication, that is made by an originator who is in Canada or is intended by the originator to be received by a person who is in Canada and that is made under circumstances in which it is reasonable for the originator to expect that it will not be intercepted by any person other than the person intended by the originator to receive it, and includes any radio-based telephone communication that is treated electronically or otherwise for the purpose of preventing intelligible reception by any person other than the person intended by the originator to receive it; "

In this you might not have completely understood the part that says, I quote

"and includes any radio-based telephone communication that is ((treated electronically or otherwise)) for the purpose of preventing intelligible reception by any person other than the person intended by the originator to receive it;".

this black and white states that the originator of the communication must treat "electronically or otherwise" the communication if he expects his conversation to be private e.g. (scramble the signal). If you read the code on interception of a radio-based telephone communication it states that if, and only if, the person listening to said communication is intercepting it, "maliciously or for gain" then that person would be liable of an offence.

|||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||| FOR SALE||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||||

AOR 8000 with cell mod's and Opto Scout Model 40. AOR 8000 also has the mod's for the scout so it can "reaction tune" the frequency that the Scout catches. also novex mod's done also.
Also included is the Optoelectronics DC 440 Tone decoder and the Optoelectronics "CI-V~ CX12" and AOR RS232 computer interface for the Scout, DC440 and the AOR 8000. And two opto DB32 mini antenna's
Everything was bought and kept just as the day it arrived all boxes, chargers, cable's, paperwork, invoice and accessories and all equipment have Nicad batteries.
All Equipment was bought from EEB and mod's were done there as well.

The total price I paid for all equipment with everything was $1451.00 and the first $1095.00 takes it all. Anyone interested or need any more info can email me at gene@surfsouth.com

I have a scanned .bmp of the invoice if anyone would like to see it.

After weeks of thought I've decided to get a os456, I was wondering if
the decoding features of the full version are worth the extra $100.
Should I save the $$ and use wintone2, or go for the better one?
Does it work better then wintone2 at decoding dtmf,dpl and ctcss, I
sure hope so...
On a side note, I live about 1 1/2 miles from optoelectronics and
decided to go there today to check things out, how disappointing..
the place has a sign on the door saying "no sales at this location,
please call the 800# for orders." ..and here I was ready to get the
full version..cash in hand.

From: feilerm@iea.com
Message-ID: <3519A6BB.7B95BB6D@iea.com>
Source record: 165696

Could someone please post or send me some good settings for the 5 AR8K
power up defaults. Adventurous soul that I am, I have "played around
with mine and now can't find that happy medium anymore. When I turn on
audio in scan mode my scan rate decreases noticably and I know I miss
some transmissions because I tested it on the TV band. Turn audio off
and it stops on the station, turn it on and it passes the station (after

a brief pause).
I would also like to start a thread on the pros and cons of different
power up default settings. I'm sure others out there have some of the
same questions as I.
Thanks in advance to all of you experts who are going to respond to this

and help us adventusome folks find that happy medium.

[REPOSTED DUE TO ROGUE CANCEL FROM BEST.COM]

Precisely my point, Mr. Innis (and his fellow NAMBLA'ers)

You feel you can do, what did you say:

" i'll talk about anything i want and if you don't like it, you can get the hell out. better yet, why don't you?"
Max Innis

...and then blame the parents for YOUR lack of taste, intelligence, OR eloquence.

It is YOU who is too dimwhitted to get the point (let alone SPELL it correctly) IF this was your FAV NG, alt.pedophiles.r.us, yes, my sons would NOT be able to read it because, YES, I am an intelligent parent who has taken necesary steps to pevent them from going places no REAL MEN go.

HOWEVER, this is a radio NG. (Not that it seems to matter) And they are sharp radio heads. Licensed as techs (go ahead, say BFD, ANYONE can get that) at ages 11&13, they are pushing the limit for a level of license you probably don't even understand, SO, they stop on by a scanner NG and show me this stuff about men "loving (actually, the word is sexually abusing) boys younger than themselves.

Can't you get it? No, that was a silly question. Deep down you MUST harbor some support for these sicko's, as your logic is as perverse as their's

G'day NAMBLA guy, and as my son said,

"No, you can NOT touch me there!"

Wrong Blake :-/

However, I do believe you are familar with the Bash Books. :)

Actually, Dick Bash was interviewing
people who came out of FCC offices immediately after they
took their amateur radio test as getting them to write down
one question & answer from the test they had just taken. He
then printed a book of the results of this. A few years AFTER Bash
had started doing this, the FCC made the question pool public &
handed testing over to the VEC's such as the ARRL, W5YI, etc.

Source record: 165747

I'm thinking of buying one and don't want to take the sellers word about how good it is.

Also, the drawing that I'm looking at shows it mounted parallel to the ground, when I thought that it was mounted perpendicularly. Would the parallel mount get better gain ?

I'm looking at the Scanner World website. Is $44.50 a reasonable price (with shipping) ?
Or is there a better place to look ?

Also, is there a way, with modern technology being where it is *today*, to repair a broken antenna, yet ?

ALUMA-GLOO, perhaps ? :-)

Oh come on! An a caesium clock fits in a 19 inch rack and is 10U high, a
rubidium clock is a 6 inch cube. Having several of each at work I know.

P.s. Wahat is "cesium", and why does it need a reactor?

Wrong Blake :-/

However, I do believe you are familar with the Bash Books. :)

Actually, Dick Bash was interviewing
people who came out of FCC offices immediately after they
took their amateur radio test as getting them to write down
one question & answer from the test they had just taken. He
then printed a book of the results of this. A few years AFTER Bash
had started doing this, the FCC made the question pool public &
handed testing over to the VEC's such as the ARRL, W5YI, etc.

Oh, i thought the WWVB and WWWH or whatever the call signs are were all the same,
where you can hear the computerized man saying the time, "At the tone zero hours, twenty-three minutes, coordinated universal time." So there are two different types of signals? A data type signal and a voice signal? Tell me if i have it right, if so where can i get a cheap receiver to get the voice transmissions? I have and OLD OLD world band radio and can tune into 10 MHz, but that radio is so old it take about 15 minutes to tune it and if you move it it loses the signal. Thanks

Mr King Kong:

After insulting me privately, you come to the public net, and play a fucking victim. You are very stupid.

As I told, an executive of this forum privately this morning, the price you are charging was too much, don't you have any heart at all, what about the newbies to this hobby? Money is not everything you fuckhead.

He agreed with me in private that it was too steep, that he does not believe you are talking in terms of US $.

I said it must be US $ becuase I asked you politely was it HK $, and you kept quiet.

Motherfucker. Someone offered me $650 for it, I was not the one trying to sell an AOR3000A without a box for $800 - what a stupid thing to do? screaming mint, does not take away the fact that eqpt is too steep in price.

I'll say take the $650, and run your fucking ass to the bank. Asshole. I still reckon $650 is $150 too steep, but some might just love this radio so much to fork out an extra $150 for it.

It is greediness to play on that likeness.

Asshole. Just don't ever send me again one of your stupid private mails, or I'l wrink your neck.

Motherfucker. I can give you $800 free, if that is your fucking problem - Asshole.

AOR3000A was launched almost 3-4 years ago, and there are newer and better models out now, how the fuck can anyone justify $800? Did they actally give you the money for it. Good for justifcation ehn?

Please lets face reality here, you guys are just fucking pissing me off now.

I have a populated Uniden 858 board as used
in the Realistic TRC-449, 457, 458 and several other
brands and models of 40 channel SSB CB's.
Board mounted parts are installed, including the uPD858 PLL IC.
No driver, final or any other chassis mounted parts.
NOS...It was aquired after production of the radios ceased...
Looks like it was ready to drop into a chassis.
This is a virgin board as it has never been used.

Best offer gets it.

DO NOT AUTOreply.
Send a NEW message to hduff@ica.net
.

You are confused. This newsgroup is for buying and selling radios
and Kin Ho is trying to do that.

If you've been told that this is a forum with an executive, then I'm
afraid someone is a week early in playing an April fool joke on you.

Please post here again when you have something to buy or to sell.

Does anyone know how I can buy/build an microphone addition to my scanner setup? I have a uniden bc200xlt and two noise reduction headsets from racing radios that we
us for race scanning. i'd like to add some kind of voice actuated microphones that would allow us to talk to each other over (or interrupt) the race
broadcast and, when finished, switch back to the scanner broadcast. I'm SOOO tired of either screaming or the shoulder-tap/earphone lift method of talking, but they want $400 for the proper setup. With detailed plans, i could build it if anyone can help!! thanks in advance

Mr. Mackey,

Although I do not like you, I must clue you in on something. You see, it appears in this case that Mr. Kendrick is an idiot unable to reason that, just 'cause you use a parg.org address to RECEIVE mail, you do not still hold your usa.net account (which you do).

You should have left it well enough alone. Now these pricks are going to fill usa.net's postmaster slot with more flamebaiting and hogwash in an ill attempt to control what you do and where you go (just 'cause they think they can. No, they may be able to lick their balls, but that's about as far as it goes).

Too bad for these loosers the ISP's are getting wise to this ploy and typically require some solid evidence of a crime before they kill your account.

Ahh the 1'st amendment is a beautiful thing, after all, that's what all these fags use as their jfor their continuing crap. (excuse me, PEDOPHILES, check out your other thread. These guys appear to be defending NAMBLA's mission. I didn't even know who that was until we were graced with their FILTH in this NG)

Precisely my point, Mr. Innis (and his fellow NAMBLA'ers)

You feel you can do, what did you say:

" i'll talk about anything i want and if you don't like it, you can get the hell out. better yet, why don't you?"
Max Innis

...and then blame the parents for YOUR lack of taste, intelligence, OR eloquence.

It is YOU who is too dimwhitted to get the point (let alone SPELL it correctly) IF this was your FAV NG, alt.pedophiles.r.us, yes, my sons would NOT be able to read it because, YES, I am an intelligent parent who has taken necesary steps to pevent them from going places no REAL MEN go.

HOWEVER, this is a radio NG. (Not that it seems to matter) And they are sharp radio heads. Licensed as techs (go ahead, say BFD, ANYONE can get that) at ages 11&13, they are pushing the limit for a level of license you probably don't even understand, SO, they stop on by a scanner NG and show me this stuff about men "loving (actually, the word is sexually abusing) boys younger than themselves.

Can't you get it? No, that was a silly question. Deep down you MUST harbor some support for these sicko's, as your logic is as perverse as their's

G'day NAMBLA guy, and as my son said,

"No, you can NOT touch me there!"

The hours of operation vary. The Air/Marine Div. is headed up by a
Sgt. Kovaleff, out of Hunter's Point.

>The press photo seemed to indicate that the helicopters were not
>equipped with Nightsun spotlights so perhaps they're restricted to day ops?

Day Operation only for right now.

>Our former helicopter, a Hughes 300, used the call sign 3V1 so if
>something like this pops up it might be them.

The callsign is simply "Air 1". They operate on PIC, just like the
ground units. You can usually find AIR 1 or Marine 1 on PIC 8.

If this law does exist somewhere deep down in the Canadian criminal code
then could you please back up your statement.

>So if the scanner is full spectrum there
>really a problem. If the device only received cell it may be illegal.

I have yet to see any law that would even remotely suggest that it would be
illegal to own such a device, unless it could be proven that that device was
used maliciously, for gain, or the device had some kind of descrambler
connected to it. The way that I understand this act, any kind of descrambler
attached to your scanner would be illegal in Canada. Does this sound
correct?

You can get unblocked scanners at,
http://burnabyradio.com/
http://www.com-west.com/
or if you live in Vancouver Canada there is a small store in the Richmond auto mall I believe that it is called AMP Communications, they usually have an ad in the lower mainland Buy&Sell near the automobile radio section. You might want to call Icom they have an office in Vancouver and I think that they sell unblocked scanners.

FS: RS PRO-26 200 channel handheld.
This is not a jumper wire modified image recieving rig.
This one has the European Version CPU installed.
(hold 2,9,keylock and turn radio on and display reads 72BEH-EUR 0.11)
Not a scratch on this radio 25mhz- 1300.00mhz with NO GAPS.
Duram Radio wants $443.24 plus shipping. Then theres Customs.
This one is already here in the US NO WORRYS
PLEASE NO PRICE WINERS, AND YOU KNOW WHO YOU ARE !!
Serious inquires ONLY. Trades always concidered

Memory is not expandable in the SportKitty. Neither
is the frequency coverage.

There are plenty of things that can be done to
most any scanner; just not cellular and not
memory in this case.

You should see my SCANNER MODIFICATION FAQ that
was recently posted to this newsgroup. It offers
some details that you can consider.

Here's a good one for scanner antennas:

```
18" 48"
------o o---------------
```

And ideally fed from a balun; TV matching transformer
being just finer 'n frog hair. The main consideration
of an OCFD is to keep the two elements non-mathematically
related, or a never-rounding decimal. The above has a
9 : 16 ratio which is pretty ideal.

> I like to design Rx antenna with Tx in mind. That way you know that the
> collective "system" is tuned - maybe not optimized, but at least tuned!
> 8-)

Yeah....ri---ght.....lemme see you go transmitting all
over creation betwixt DC and Daylight. And gimme a
video camera to shoot the scene when the D.O.C. comes
around to test your intestinal fortitude.

<grin>

> comparison is fair.

I don't think it's a "for certain". A lot depends on
whether the obstruction or surface is a reflector or
an absorber or even a disperser. Three different conditions
can yield three different results. Complex impedances
go nutzo under some conditions.

The thing is, what works for a ham doesn't always work
so good for the scannist. It was that very point that
you and me argued over a couple of years ago with respect
to TV antennas mounted vertically.....for scanners. I
doubt any ham in reasonable possession of his faculties
would transmit through a TV antenna.... and thus would
logically think...not to receive, either. But TV beams
make great, highly directive, high gain scanner antennas.

That could be why you've never messed with OCF-dipoles,
as I doubt you'd ever transmit through one. But anyway,
lest we digress.....

Ummmm, yeah, come to think of it, I did a three-state wide
repeater system in 1982 where some sites were configured
with an array of folded dipoles. Plumb forgot all about
them. I used yagis from DB Products for most of the
sites. But an occasional store-and-forward site sometimes
needed to collect data from several other sites around
the azimuth. Even used PASSIVE repeaters in a couple of cases.

Some SWL'ers did something of that nature using rotator wire,
you know....the kind that has 5 or even 8 conductors. Only
they brought it around into a loop. Dubbed it the "Carpet Loop"
no less...because it could be laid under the carpet in the
living room or where ever......

But I don't think that one even behaved like a dipole, much less
looked like one. It was a tunable loop, as I recall.

Andy,

I made a similar multi-band dipole using 3/4 inch PVC pipe with the wire legs contained inside. The longest dipole is cut around 49 Mhz and the shortest 870 MHZ. There are a total of 7 legs. A PVC TEE is at the center and this is where the coax exits. Oh yea, it is mounted vertical. Works surprisingly well. Certainly does a better job on the 7 freqs it was cut for and quite a few others. Highly recommended for a DIY that wants to play with a cheap antenna. Certainly better than a whip!

>Any info would be great!

The prefered method for adjusting the squelch on the Minitor is
by using the squelch control.

Take the top off the pager, push the two circuit boards up from
the battery compartment, and looking at it as a sandwich, from the
edge, you will see either the end of the reeds on the side, or you
will be seeing a pot. Turn the pot to adjust the squelch.

You can't "listen" to WWVB the way you can with WWV/WWVH. Apparently the clock receives coded transmissions regarding the time.

Within the past day or two I read a message where someone found an atomic clock at Wally World. Well, they didn't find an ATOMIC clock, but they found one MARKED "Atomic Clock" that adjusted to WWVB. I mean, how would your neighbors feel if you had to set up a cesium reactor and dig a mile-circumference ditch in order to set up the magnetic guns?

"Cesium" is what the Wicked Witch yells to her Guards and Winged Monkeys
during the Climactic Castle Chase (CCC). Before the CCC, you will note the
use of an "hourglass" but I have no idear how long a time period was measured
by that specific device.

Hmm. You encouraged me to bring up something that I've been thinking about in reading this thread.

Actually, he's talking about listening in on BABY MONITORS, not cordless phones. But, while I'm aware that baby monitors are within the same bandspread as the cordless phones, and use some of the same channels...

The question is...are "baby monitors" specifically included in the listening ban? I don't _think_ they are. But I could be wrong.

I forget, myself. Been a while since I had to look up the law, personally. ;-)
Had to do with a particular kitty cat I USED to own which disappeared once evening. Neighbor was the culprit. Info was not useable because of how I obtained it - with a scanner listening to their portable phone, and they got away with it. Was actually two weeks after the Gingri...Ging...the Egotistical Numbnut Event.
Found out they'd shot my cat with a pellet gun for fun. They'd also been harrassing us by lobbing golf balls at our house and causing damage to it - as well as at other neighbors homes, and throwing drug paraphanalia (sp?) and trash in our back yard. Believe me, the police WANTED the information I had on them, but when the actual law was scrutinized, it was discovered it could not be used.
I had license plates for over 70 visiting vehicles that would come in cycles over a week), recordings of phone conversations regarding drug deals and drug meetings, confirmation and braggings on how they killed my cat, how it writhed and suffered ("it was standing up in our front yard just like a chipmonk and I took the gun and shot it through the head man! should have seen it! was so funny how it...[gory details of death removed]...I hid it and waited until after mom left the next morning for work and then I took it and threw it in the garbage can."), braggings about how they went into our garage years past and stole a toolbox containing old hand-tooled tools that used to belong to my great-great-grandfather - Civil War era hand-made tools). The information could have nailed the sadistic SOB, and his accompliss friend. But, because of the law, they got away with it.

Don't that beat all?

I should have said to hell with the consequences and reported it all anyway. Its kids like these who grow up thinking that killing animals is okay, that being sadistic to people is okay, who dream of "blowing people's heads off with a shotgun while they're tied, arms behind their back in a chair, wouldn't that be cool?!" as one recorded conversation goes - who are suddenly coming of teen-age and are now killing their own peers for stupid, meaningless, trivial and inconsequential little things in their own hometown schools.

Unlike Ging-whoever, I had a real cause to turn on that scanner and tune to those freqs -- if it ever came down to that. However, as it really was, it was an accident - I'd hit the wrong scanner bank button - the 0 instead of the 8 (wich on a BC-100XLT is right beneath the 8). It contained the portable phone freqs that I hadn't used in about a couple years. In that time listening to those freqs became a banned thing. :(

But yes, SIU wanted my information badly until we researched and discovered the current laws regarding scanning port. freqs.

Todd

You have NO idea what YOU are talking about!

Look at the -=PATH=- statment it DOES NOT start out as "CTS" as you
indicate. It appears as YOU are lying only to create trouble! I starts
at
sprint! (look to the far right for the beginning, NOT the left)

I can't recall the full URL, but there is an on-line search at the Canada
Justice Department's WEbsite (http://canada.justice.gc.ca) follow the
links to the "laws" link. This would be in Section 46, of the Criminal
Code of Canada. Search terms would be intercepting of telephone or of
telecommunications. Yes descambling of scrambled communications is also
covered under Her Majesty's Laws of the Land...

Dave's NF2G scannist pages does have some links at the URL:
http://www.ggw.org/nf2g/canada_index.html

I have a Uniden trunktracker scanner for sale. $175.00. Perfect condition including the box and manuals.

I also have a Alinco DR-130 2M mobile rig for sale. Asking $200.00 for this unit. In good shape. Comes with mounting bracket and appropriate plugs. Also comes with radio shack magnet mount mobile antenna

GE-PCS radio for sale. Will work with EDACS systems. Have this programmed for Denver Co and Westminster CO, receive only. This is a hobby radio for me. Will sell for $400.00 firm.

Will sell all radios at once or one at a time. If you're interested, please email me at

N0VLD@yahoo.com

for those of you who don't know. the 0 in N0VLD is a zero, just incase you're not familiar with ham callsigns.

Oh, i thought the WWVB and WWWH or whatever the call signs are were
all the
same,
where you can hear the computerized man saying the time, "At the tone
zero
hours, twenty-three minutes, coordinated universal time." So there are
two
different types of signals? A data type signal and a voice signal? Tell
me if i
have it right, if so where can i get a cheap receiver to get the voice
transmissions? I have and OLD OLD world band radio and can tune into 10
MHz,
but that radio is so old it take about 15 minutes to tune it and if you
move it
it loses the signal. Thanks

The Wisconsin Central is now using 160.215 as a Dispatcher channel on the
Chicago Sub from Trevor WI to River Grove IL. 161.295 is still used for
Road purposes. 160.215 is called "Channel 9"

WC Radio Layout is:
1 160.785 Road West
2 160.260 M/W, Chit Chat
3 161.295 Road East
4 160.335 Terminal Operations
5 160.845 Yard (NFDL)
6 161.070 Yard
7 161.250 Yard (Green Bay)
8 161.385 Yard (Green Bay)
9 160.215 Dispatcher (Chicago Sub)

Channel uses vary around the system.

Hi All,

It appears that someone from Rockwell Automation has issued
a series of Rogue Cancels in the rec.radio.scanner and
alt.radio.scanner News groups AGAIN!!!

Who ever is doing it appears to be using a Patch version of
Netscape which seems to allow cancels of articles that don't
match to From User ID. This very strange???

It appears that this Rogue has cancelled several Aricles tbat
were posted from the following ISPs:

harborcom.net
aol.com
imcnet.net
ispnews.com
uswest.net
dejanews.com
cei.net
erols.com
bellsouth.net
bellglobal.com
earthlink.net
sprintnet.net
wordlnet.att.net
netcom.com

Anyway, these are the headers that I came across this evening:

Path:

3093. Help decoding Uniden manufacture date

Newsgroup: rec.radio.scanner
Date: 1998-03-25 00:00:00 UTC
From: Scott Vieth <vieths@ameritech.net>
Message-ID: <3519A7A8.90D62EF0@ameritech.net>
Source record: 165879

Hi:

I've got a SportCat 150 (yellow, if you interested) that has a manufacture
code of "0DID". Can anyone help me decode this?

The reason I'm asking is that I had my SportKitty running next to my brand
new BC895XLT and one of them was picking up cell phone calls in
the neighborhood of 900MHz.

Since I purchased the SportKitty about a year ago, I knew it could pick
up phone conversations but I didn't think it was anything special. But now
I'm running it side-by-side with my 895XLT and the 895 isn't picking
up a damn thing in the 900 MHz range.

I'm thinking that I got a SportKitty that was manufactured before the
cellular ban went into effect. Maybe this particular radio sat on the
shelf at Best Buy for quite a long time before I bought it last Summer?

I can't think of any other reasons that would explain why my SC150 can
pick up a ton of conversations and the 895 gets nothing. I even monkeyed
with the antennas on both radios. The SC150 can still monitor phone conversations
even with it antenna disconnected!

Can anyone explain why the SC150 is picking up calls and the 895 is
drawing a blank?

-Scott

I am a newbie to digital radio and have experimented with a couple of software programs. First of all I am using a SONY 2010, a regular old PC with a soundblaster compatible sound card with the microphone placed close to the Sony's speaker. A very basic setup. I have tried FTV, WEFAX and BTL and the only one that I have had any success with is BTL.

BTL is only good for RTTY. I have on several occassions been able to decode RTTY signals in the 7080-7090 and 14080-14090 bands at 45/170. These are mostly hams. I have spent hours trying other frequencies/baud/shift but with no luck. BTL seems to be a very sensitive program producing stuff even when the mike is some distance from the speaker. It is easy to use. I usually set the baud/shift to 45/170 and tune around. If I hear anything that remotely sounds like the RTTP diddle, I tune the center freq up/down a little bit till i get the typical bars that are equidistant from the center and voila the garbage on the screen turns into recognizable words.

If you know of a strategy or a way to get anything other than hams on the 40 m and 20 m bands please let me know. I am keen on being able to do that.

FTV supposedly can handle FAX, SSTV, RTTY and MORSE. Forget about morse. RTTY is also not very good. It only has a clumsy setting for baud. god alone knows what it does for the Shift and the only tuning has to be done on your radio - that means you need a real good radio. Also it does not seem to be too sensitive. I have not been able to decode even one station with FTV. Maybe I am not using it properly - but the instructions don't help a lot - at least for a newbie. Now, with FAX/SSTV, I would not be able to identify the sound if I heard it. I have tried for hours to get anything that remotely resembles something taht is not noise but with no luck. If you have any luck with FTV please let me know as I would like to be able to decode FAX/SSTV.

Sounds like a data signal from a cellular type system. With all the new data and voice systems out there nowadays, it could belong to one of many different services. Also, if it originates from Canada it makes it more difficult to pin down due to the less information available as to users of specific freqs in that range.

I have removed the AC cords from all of my 2004/5/6 scanners (all 8 of them) and on some I installed a plug/socket arrangement. Since I power all my radios from a single 12VDC power supply in the shack, the AC cords are not needed.

The 2005 uses a small coaxial power cord for 12VDC, and that can be had at the local Radio Shack. Check the polarity and be sure the cord has the center tip as Positive.

I prefer the AS Mon-51 due to its superb low band covereage and good coverage on other bands. I end up with VHF 1/4 waves though due to low clearence in the garage, and 95% of my listening in the VHF highband...

As a police dispatcher I will give you my "spin" on your situation, take it for what it is worth...

Call your local police dept and tell them what has happened, and don't leave your name. We get anonymous reports all the time where I work. We like to know the name of the reporting party, but don't always get it. You may be told "we need your name for the report, it wont be given out to anyone..." or "we cant act on your complaint without your name...", don't buy it.

Taking care of these matters is always much easier when we have the name of the calling party, but as public servants we also have a duty to investigate crime and protect the public. Any police department that did not act on an anonymous complaint of serious child abuse is just asking for trouble. Obviously I cant guarantee what would happen for sure, but I'm pretty confident your police would at least look into it.

Step two: notify your local welfare or families and children office of the same thing. Do this right after you call the police. Don't give them your name either, unless you want to.

CALL BOTH THE POLICE AND WELFARE. Trust me. It will actually get looked into if you do.

And dot feel guilty for listening to your neighbor's transmissions. If they didn't want their privacy violated, they should not have put a transmitter on open carrier in their home. period. You are not guilty of anything more than what thousands of police officers do every day. I know of several instances where baby monitors and cordless phones were used to gain "probable cause" of further investigation. The use of their scanners in the squad car for eavesdropping was not used in court as evidence. Thus the difference between "evidence" and "probable cause". I was even personally involved in an incident, quite similar to yours, where a neighbor heard a child being abused on here cordless phone when she picked it up. I was called from off duty to use radio direction finding equipment to locate the baby monitor which was on the same frequency as the calling parties cordless phone. Those people were convicted of child abuse, and I was called to testify about my part in locating the defendants home. Not once was the FCC or any federal privacy act brought up in court.

P.S.: A tip on remaining anonymous when you call ANYONE. You may have caller I.D. in your area. If this is the case, or if you don't know, look in the front of your phone book, in the Custom Calling Options section, for "Caller ID Block", "Per Call Block", or "Privacy Calling". Federal law mandates telephone companies to provide this service. It will give you a short number to dial, something like "*67", before you dial the number to the police or welfare office. And just incase you didn't realize it, you don't have to

subscribe to Caller ID for it to work on calls from you.

P.P.S: I have worked as a public safety dispatcher for over ten years. I have been a "scanner head" for much longer than that. Just for the record, there are some people in the public safety and law enforcement fields who believe in and support the rights of scanner owners.

3103. FS: Bearcat BC2500XLT scanner

Newsgroup: rec.radio.scanner
Date: 1998-03-25 00:00:00 UTC
From: Jim - KD6DX <sakane@wco.com>
Message-ID: <6fcodliub1@news.ncal.verio.com>
Source record: 165889

The BC2500XLT scanner has been used very little and is in very good condition. I purchased the scanner new from Scanner Unlimited, near San Francisco, and had them perform their unrestricted frequency modification at the time. The scanner steps the proper 30 kHz channel spacing

Uniden BC-2500XLT
1) Scanner, excellent condition
2) Original box, excellent condition
3) Leather Case, excellent condition
4) Flex Antenna, excellent condition
5) 4 or 5 dead Battery packs, poor condition
6) Charger, excellent condition
7) Asking $250 + Shipping

Last year I purchased a new battery pack from Scanner Unlimited and it too is currently dead. This sort of proves three things.
1) the batteries are still available.
2) I don't use the scanner enough to maintain my batteries
3) Bearcat makes poor battery packs.

The BC2500XLT is a 400 channel, continuous band* scanner, 25 MHz to 1.3 GHz.
*Excludes UHF Television 551 MHz to 759 MHz, but includes all the other bands.
V.E.O. Control, 20 Banks, Turbo Scan, Auto-Weather and Auto-Store.

Source record: 165890

No morse code. The pro-51 is AM and FM only. To hear Morse code, you'd need a CW mode. With CW, the transmitter sends an unmodulated transmission. To hear it, the receiver mixes in a second frequency very close to the first. The difference is in the frequencies is a modulation in the relm of human ears.

You could certainly direct the output from the earphone jack to the input on your sound card to capture sounds, however.

> -- Chuck

That is true, but there are a many scanners out there that have
the cpu's abilities configured by a set of diodes or jumpers. These
enable cell, 800mhz reception, set's HF freqs to Euro or American, etc.
With a few scanners, one of these options are to control the max number
of stored freqs. Remember the Pro-2004's mod to add 100 channels?
I remember reading an article a while back talking about
expanding the 100xlt's memories (which uses the same CPU as the 200xlt,
which is a 200 channel scanner) to 200 channels. Now that I have a 100xlt
of my own, I'd like to do that, but can't find anywhere any info on this
mod.
Anyone know anything on this, or am I mistaken about this
particular scanner's abilities.

I once had a "spider dipole" that was cut for 75, 40, and 20 meters.
It also covered 15 on the third harmonic of the 40 meter wire. I fed
it with coax, and the wires were inverted V configuration that also
served as guy wires for a 50 ft. mast. Worked great. It'd also do
ten meters fairly well, but I had a better antenna on ten.

A ribbon cable dipole cut for a bunch of frequencies of interest
should work fair for scanning, too, but I've never tried it. Wouldn't
cost much to make, though.

I am thinking of purchasing a Bearcat TrunkTracker and where I live in West Orange, NJ the police are on a trunked system with four channels, and now I have them in the first bank of my Sportcat Radio and have to keep hitting scan real fast to track the conversation. Now , I know the Trunked tracker will be able to track the channels but West Orange also has this annoying noise that transmits constantly and my question is, will the tracker also eliminate this sound and is this normal with trunked systems ? Any help would be much appreciated
Please email me.

Thanks in advance,
Bob Sayers

You will find using a TT will enhance your listening greatly (and yes, say goodbye to the noise) as long as it is not a GE/Ericsson system, which a TT will not track. I have the BC895 and I recommend it highly.

Bob,

Unfortunately West Orange is a 4 channel Ericsson EDACS trunked system
and the Trunk Tracker will NOT be able to follow the conversations.
The Trunk Tracker only follows Motorola analog trunked radio systems.

Howdy kids!

Got a question for ya. How good is the image rejection
on the BC895? I got one not too long ago, and while
using it in my car I'm getting all sorts of interference;
everything from pages to cell conversations. Here's
what puzzles me though. It's a mag mount antenna.
When I put it on the roof of my car is when I have
the problems. If I leave inside the car on the back-
seat, there's no problems. Any ideas?

BTW-- It's a cellular phone antenna from RS. It's
also an 87 Ford Crown Vic. Don't know if either of
those two might make a difference.

Thanks!
Scott

As it appears from another post in this group that the Trunk Tracker will not follow your local system, you aren't left with much choice but to keep doing wht you have.

May I suggest that you insure the delay is OFF on all four memory channels to allow you to follow the channel hop more quickly.

FUNERAL ANNOUNCEMENT FOR LOS ANGELES CITY
FIRE DEPARTMENT MEMBERS MCCOMB, BUTLER, AND REINER
KILLED IN THE LINE OF DUTY

In the morning hours of March 23, 1998, LAFD Helicopter 3 crashed killing Apparatus Operator Michael McComb, Firefighter/Lead Paramedic Eric Reiner, Firefighter/Paramedic Michael Butler,
and Norma Vides, a patient on board while en route to Children's Hospital.

The memorial services for members McComb, Reiner, and Butler are scheduled for Saturday, March 28, 1998. Inclement weather is anticipated on Saturday.

The memorial services will consist of a fire/EMS apparatus procession, walking procession, and memorial service in the Los Angeles Sports Arena, 3939 South Figueroa Street. Other agencies,
e.g., LAPD, CHP, etc., are also invited to participate in the apparatus procession with your agency's apparatus. The apparatus procession will start at the Frank Hotchkin Memorial Training Center,
1700 Stadium Way, Los Angeles (Thomas Guide Page 634-G1). Staging will begin at 0730 hours at the Hotchkin Training Center and will depart for the Sports Arena at 0845 hours. Your punctuality would be greatly appreciated. Please RSVP to the LAFD's Community Liaison Office at (213)
485-5954 only if you plan to send an apparatus and/or a Chief Officer representing your department.

For fire service members and their apparatus that are travelling great distances and need overnight accommodations, contact the Hospitality Coordinator at (213) 485-5162 for lodging at LAFD stations.

Many departments and agencies have expressed a desire to participate in an aerial flyover. Out of respect for the wishes of the McComb, Butler, and Reiner Families, there will be no aerial flyovers. There will, however, be aircraft parking at the Van Nuys Airport with shuttle transportation to the memorial service for pilots and crew members. Please plan to arrive at the Van Nuys Airport
no later than 0700 hours on Saturday, March 28, 1998. RSVP to Captain Thomas Kephart, at
(818) 756-8635, if you will be arriving via aircraft at Van Nuys Airport.

If you intend to participate in the walking procession, please arrive by 0830 hours and park in the Sports Arena south parking lot (enter off Martin Luther King Boulevard from the 110 [Harbor] Freeway; Figueroa Street will be closed). A shuttle service will transport participants to the walking procession staging area on the south side of Exposition Boulevard west of Figueroa Street.

If you wish to attend the memorial services only, please park in the Sports Arena parking lot and be seated in the Sports Arena no later than 1000 hours.

Expressions of support and sympathy may be forwarded to the following:

The Butler Family, the McComb Family, the Reiner Family
c/o Los Angeles Firemen's Relief Association
2900 West Temple Street, Suite 102
Los Angeles, CA 90026

To make direct donations to the Butler, McComb, or Reiner Families, please forward to either:

Widows and Orphans Fund Fire 3 Memorial Fund
In Memory of Helicopter 3 c/o Los Angeles Firemen's Credit Union
c/o L.A. Firemen's Relief Association Post Office Box 60890
2900 West Temple Street, Suite 102 Los Angeles, CA 90060-0890
Los Angeles, CA 90026

We have continued to receive a tremendous outpouring of support from the fire service and related agencies. We thank you and cannot begin to express our deepest appreciation for the support we have received.

I have a JD-100 airband scanner that covers both civilian VHF and military UHF airbands, plus the military air tactical freqs. from 138.000 to 144.000MHz AM mode. I'll include a Watson Air-Gainer antenna with the radio. It has 20 memory channels, or you can search the entire frequency range.

The radio sells new for $150.00, and the antenna is another $30.00. Both are in perfect condition. I'll sell both for $120.00, and I'll pay shipping via U.S. Postal Service Priority Mail.

Well, there's nothing wrong with injecting a signal from a test set and measuring return loss, is there?

Failing that, I've never heard of anyone going to jail for a short blast of 10W on any given frequency! Haha!

> The thing is, what works for a ham doesn't always work
> so good for the scannist. It was that very point that
> you and me argued over a couple of years ago with respect
> to TV antennas mounted vertically.....

An old friend of mine built a 10Watt FM transmitter from scratch and set up a little Pirate Radio station. He used a TV antenna that had elements for FM radio as his broadcast antenna. I questioned what the VSWR was like and he proceeded to prove to me that it was better than 1.3:1. Honest!

Mind you, if you blasted 1kW through the thing I'm sure the conductivity of pop-rivets would demonstrate the limitations.

>My RS Pro 64 picks up strong paging signals from 929 and 931 MZ
>exactly 515 MZ lower starting at 414 MZ. Is this a normal image for
>this scanner and is there any way to filter it out?

PRO-64 uses triple conversion with IF frequencies: 257.5MHz, 21.4MHz,
and 455kHz. When tuned to 414MHz, the first local oscillator is set
to 414+257.5=671.5MHz and the image is at: 671.5+257.5=929MHz.

Image suppresion is listed as 50dB for the first IF frequency. If you are
picking the image even when the antenna is removed there is little you
can do. If the image signal disapears when the antenna is removed,
a filter placed between the antenna and the scanner would help.

It is entirely possible. Check Dejanews for references to the EDACs control channel monitoring program (or check out http://web2.airmail.net/lblant1/dfw.htm). With a custom modified version of this program, any remote controllable scanner can track groups (although one must now the frequencies associated with the "logical" channel numbers used in the protocol.)

Richard Kendrick <wa7twi@primenet.com> is the genuine author
of this message.

*-John "Richard Simmonds is the best lover I've ever had,
and that's had me ;-)" Mackey-* KA0SSF tried to
lie his way out being caught using illegally
obtained Internet access:

> I have NEVER done what you state below. If you have any
> proof, then POST IT OR BE SHOWN AS THE LIAR YOU ARE!!!!!

> > Richard Kendrick wrote:
> > Never mind the dozen fictitious addresses you used on the
> > accounts you illegally broke into.

You've have used, and admitted using, over a dozen (actually
seventeen) fictitious and illegal Internet addresses. I know
you have a *very* bad memory (too much prozac abuse), so I've
listed them here for your edification.

anyplace@nowhere.mil no-place@anywhere.com
No-place@anywhere.org nowhere@anyplace.net
jomackey@hotmail.com mackey@idiots.org
nothing@anywhere.edu nowhere@anyplace.net
no_adress@anywhere.com no.address@anywhere.gov
No-address@No-where.com no_place@any-where.com
no--place@any__where.com no-place@anywhere.net
No--place@any-where.org no-where@no-place.com
nothing@anywhere.edu

You claim that you were in a work situation where you had T1
access, but no real Internet access. In other words, you had
to steal access to gain entry. That is theft of services, a
criminal act.

Using your real name and call sign is only a diversion to
deflect attention from your criminal activity. It's your
little way of making it *look* like you're legitimate.

The only thing you've offered to back up your claim that you
had legitimate access, is your word. Wake up and smell the
coffee, Toilet Boy, your so called "word" is totally worthless
in the scanner news groups, and the Internet as a whole. Since
your word is so worthless, you'll have to do better if you
expect anyone to believe you.

The only way you can prove what you say is true, is to identify the employer and the specific task or tasks you undertook. When I say identify the employer, I mean the name, address, telephone number, and the name of your supervisor.

If you can't prove yourself as outlined above, then you lied about having legitimate access. Up to the challenge, Toilet Boy? I thought not.

> I'm coming from USA.NET right now so YOU must be the one
> lying!!!

> Richard, if USA.NET dropped me, then how come I am able to
> use thier system, LIKE I AM RIGHT NOW????

I'm coming through USA.NET exactly like you are, Toilet Boy. I changed the preferences in Netscape to make it look like I am on USA.NET while still using my normal ISP (Primenet). For the record, I am not now, nor have I ever been a customer of USA.NET.

You were dropped by USA.NET, but, you are using the same technique I've demonstrated here, to make it "appear" you are still with USA.NET. Another lie from you, Toilet Boy.

> Guess who's telling a lie now?? YOU!!!!

It's still you who is lying, Toilet Boy, as usual.

Robert,

It's interesting that you have tracked the "cancels" down to Rockwell in MKE.
I've heard that Rockwell has gotten rid of all their I.S. contractors and may
be laying-off their full-time I.S. staff as well. Maybe the cancels are a result
of this huge personnel change? I don't think the rec.radio.scanner group
was singled out for attack...

I will be up in Pittsburgh, PA this weekend. I am looking for the local frequencies for CSX and Conrail. I have scoured the net, but could not find Pittsburgh specific. Yes, I do have complete lists of frequencies for most, if not all railroads, but the list is not area specific (except for a few cases). If anyone could help, it would be greatly appreciated. Thanks...

In the US, there are no cellular phones authroized to operate in the 900 MHz range. YOu could be hearing analog 900MHz cordless phones. More likely, you are hearing images of the cellular towers in the 869-894 MHz range. My BC220XLT also can clearly hear images of cellular conversations when tuned to 900MHz frequencies, even though the CPU will not allow direct tuning of the cellular range (869-894MHz). Both the Sport Cat and the BC220XLT are double conversion scanners, meaning they will hear signals 21.6 MHz below or above the displayed frequency. The BC895XLT is a higher-quality triple conversion receiver, and only hears the frequency that is on the display. Police Call has a good explanation how images are caused and the double conversion scheme used in many scanners.

3148. AR8000 AM Broadcast question

Newsgroup: rec.radio.scanner
Date: 1998-03-26 00:00:00 UTC
From: Bob Young <boby@blazenet.net>
Message-ID: <6ff5tliee1@news5.ispnews.com>
Source record: 165534

I have an ar8000. I can sit about 1/4 mile from a 5000 watt broadcast station. The signal strength meter bar is almost to the top of the scale. Its on 580 KHz. However it has very low level audio. On the vhf & uhf parts of the band it seems to work fine.

It also seems to be insensitive in the shortwave part of the band.

There seems to be three possible problems:

1. I don't know how to operate the ar8000 yet.
2. The ar8000 unit I have is broken.
3. This is the way all of the ar8000 units operate in the am broadcast band...lousy. The shortwave band seems to be lousy too.

I don't have another one to compare it to. So I don't know if I should return it for repair or not. I'm not even sure where to return it for repair. The book doesn't even say anything about warranty or where to send it to. Is this the same as yours?

Thanks,

Bob

Hi All,

Does anyone have a complete list of frequencies for Oakland
Center?

Please NOTE that I've already obtained the frequencies for
San Francisco (SFO), San Jose (SJC) and Oakland (OAK) from
the AirNav site (http://www.airnav.com) and don't need those.

I'm looking for the ARTCC frequencie for Oakland Center.

This is a list of frequencies that I already have for
Oakland Center:

High Altitude Advisory - 135.7
Angels Camp - 134.375, 132.95, 127.95, 126.85, 121.25 119.75
Bishop - 125.75
Fallon - 134.45, 128.8
Ferndale - 134.15
Fresno - 134.375, 133.7, 132.8, 126.9, 123.8
Half Moon Bay - 134.15, 133.05, 127.45, 125.45
Hollister - 127.45
Mina - 132.05, 125.75
Mt. Tamalpais - 127.8, 125.85
Priest - 134.55, 133.7, 132.8 128.7, 126.9
Red Bluff - 134.975, 133.375, 132.2
Reno - 134.45, 128.8
Sacramento - 132.95, 127.95
San Luis Obispo - 128.7
Tonopah - 132.05, 125.75
Ukiah - 134.975, 133.375, 132.2, 127.8

The one that's mystery to me is 119.475. It's an Oakland Center
frequencies, however, I have no idea what area it covers and it's
not listed in any of the Jeppesen Charts for CA.

Does anyone in the San Francisco Bay area know what area 119.475
covers?

Thanks
Bob

3152. Re: pager frequency by phone

Newsgroup: rec.radio.scanner
Date: 1998-03-26 00:00:00 UTC
From: chuckm@zocalo.com
Message-ID: <chuckm-2603982031100001@157.22.200.2>
Source record: 165538

In article <351b1926.4768115@news.francomedia.qc.ca>,
zoro@francomedia.qc.ca wrote:

> hi. i can i find a pager frequency by the phone number?
>
> zoro@francomedia.qc.ca

No. The pager company has only a few frequencies. Each is constantly
carrying data bursts. Each burst contains a sync header followed by the
digital address or "capcode" of the pager, followed by the content of the
page message.

Made my order by fax to avoid chating long dist. Wrote down the item
with a visa number and exp. dateand a ship to address. Took about 8
working days to get the item, everything worked just fine. I would pay a
little extra for faster shiping, but thats me.

Excelent question I'v adjusted my settings "ever so slightly" and tend
to go back to the defult. I eather miss TX. that I normaly hear or it
goes to the other extreem stoping on all sorts of crap. The owner man.
doesn't realy go into the down side as to if you adjust this you may not
hear this.

Someone please follow up with as much info as possable.

3156. Funny police story...

Newsgroup: rec.radio.scanner
Date: 1998-03-26 00:00:00 UTC
From: Adam Lane <alane@thegrid.net>
Message-ID: <351B3AC8.432B@thegrid.net>
Source record: 165542

Interesting police call...

Upset man calls 911, since he does not speak english well, it's dealt
with as an "ascertain unknown problem" call.

They get the guy on the phone along with a policeman on the scene
and a dispatcher. (i'm not too sure how that worked)
A certain level of confusion prevails until
a police translator, who had been listening, says that...

The man is unhappy about the "quality of service" that he got for
$150 at the local massage parlor.

There really isn't much the police can do at this point. It's
one of "those" parlors and the guy was probably expecting something
that's somewhat illegal. The tone of the voice of the dispatcher
and the primary unit was "classic" after hearing this.

3157. Pro-2035, Thanks to everyone that responded!!

Hi All,

It appears that someone from Mendocino Community Network
(HTTP://www.mcn.org/Admin3/default.nclk) has issued a series
of Rogue Cancels in the rec.radio.scanner & alt.radio.scanner
News groups AGAIN!!!

This is the Break Down of the 49 Rogue Cancels as they occured:

2 Cancels for Bro Dogg <cipher@mcn.org>
1 Cancel for Bro <bro@bro.com>
1 Cancel for George Vetterle <geovet@ix.netcom.com>
1 Cancel for Salvatore Gambino <sgambino@worldnet.att.net>
1 Cancel for -John- KAOSSF <ka0ssf@paNOSPAMrg.org>
17 Cancels for OBFD <obfd@aol.com>
6 Cancels for -John- KA0SSF <ka0ssf@paNOSPAMrg.org>
5 Cancels for _John *KA0SSF* <ka0ssf@paREMOVErg.org>
3 Cancels for _John *KA0SSF* <jmackeyREMOVE@usa.net>
1 Cancel for _John *KA0SSF* <ka0ssf@paREMOVErg.org>
3 Cancels for _John *KA0SSF* <jmackeyREMOVE@usa.net>
2 Cancels for _John *KA0SSF* <ka0ssf@paREMOVErg.org>
4 Cancels for _John *KA0SSF* <jmackeyREMOVE@usa.net>
2 Cancels for _John *KA0SSF* <ka0ssf@paREMOVErg.org>

Anyway, these are the headers that I came across this evening:

[REPOSTED DUE TO ROGUE CANCEL FROM BEST.COM]

Shows who the REAL neanderthals are. Sure don't take much to impress you primitive idiots. As for Mr. Innis, if all he can do is play 6th grade word games, I'm afraid he'll have to do better.

L8r dayz, NAMBLA BOYZZZ!

Remember, it's YOU folks who read the NAMBLA crap!

>Ha! Ha! This was just great Max! I love it when you verbally slap one of
>these
>anal-retentive neanderthals :-)
>
>AB

3161. [REPOST] Re: Who are "Bill" and "John"?

Source record: 165547

[REPOSTED DUE TO ROGUE CANCEL FROM BEST.COM]

>(George Vetterle)

>I didn't see anyone defending the NAMBLA post. Mackey asked what it
>was and somebody told him.

Obviously YOU don't know how to read. Also, I did what selfrighteous idiots like you always whine about, and took it to e-mail. I think I made a point, as I have yet to hear back (after several exchanges)

BUT, to be sure, there were several of you like minded fools who said stuff like "I'll post whatever I damn well feel like, if it offends your kids don't let 'em in here" kind of bull, as if raping little boys has anything to do with scanners or the size of Mackeys pecker in Butt's Cheeks. (for simpleton's like you, that's Bill Cheek)

I will say one thing, BCheek has made himself scarce on off topics, one down, how many shticks like you to go?

And as for screen names (ref this AND your next post) just WHO do you think you are to tell someone HOW to post.

YOU sure don't want anyone telling you WHAT to post. DORKUS!

No, it's the best you can do to try to offend someone, and like the "moron" crap, that's school yard stuff. My kids are WAY above you!

Hose off!!, Eh

3162. [REPOST] Re: Who are "Bill" and "John"?

Newsgroup: rec.radio.scanner

Source record: 165548

[REPOSTED DUE TO ROGUE CANCEL FROM BEST.COM]

Geo,

ANY HAM should be offended by some self righteous idiot like you who, one one hand, agrees with those who say "I'l post whatever I..." ALL WHILST storking with your other hand and saying "you need to use a screen name like..."

FOOL, you aren't even an EXCUSE for a HAM!

Maybe you're a NAMBLA boy?

>Any Ham should also be offended by the antics of John Mackey.
>If you're going to be righteously indignant then you should start by
>posting with your real name and not an AOL screen name.
>
>George L. Vetterle
>geovet@ix.netcom.com

Source record: 165549

[REPOSTED DUE TO ROGUE CANCEL FROM BEST.COM]

>Yeah, I sent this clown an e-mail but what I got in return was a >bunch of ranting, raving lunatic stuff,

This is what people say when they LOOSE a debate to a person who is more literate, intelligent, and eloquent, which he most DEFINATELY DID!

>so I turned on the bozo filter.

That's IMPOSSIBLE, for if you had WE WOULDN'T SEE YOUR POOR, PATHETIC EXCUSES when you LOOSE (Looser!!!)

>I pity your kids, having a hypocritical vulgar bum like you for a >father.

Well look at the black pot calling the kettle a NIGG**

We may only hope YOU never figure out how to reproduce.

>Notice that he's yet to post a single thing about scanners, which is
>what he ostensibly is here to do.
>I pity your kids, having a hypocritical vulgar bum like you for a >father.

INCIDENTALLY, this MALexder FOOL is the BIGGEST DEFENDER OF NAMBLA. He VEHEMENTLY DEFENDS his posting of that SICK CRAP TO THIS DAY, leaving us with only one truth, THAT HE IS ONE OF THEM.

WHO ELSE WOULD EVEN KNOW OF THEM, LET ALONE DEFEND IT with such vim and vigor?

While he defends his right to post that crap, using EXTREMELY VULGAR LANGUAGE, he tries to slam me for what I post.

And then he calls ME hypocrytical.

I would call HIM that, but really it's DYSFUNCTIONAL, not that he would have the SLIGHTEST idea what that is.

What a pathetic excuse for carbon based existence!!!

"Do as I say, NOT AS I DO" - MAlexder

Get the help you NEED LOOSERBOYLOVER!!!!!!, and STAY AWAY FROM MY KIDS!!!!!

I will be visiting Greensboro, NC in a week.

What are the hot freq.s to listen to???

What is the Freq for US Air?? I will be flying US Air.

Thank you for your help,

Tim photographer@cheeful.com

3167. Voice Opinions...!

Newsgroup: rec.radio.scanner
Date: 1998-03-26 00:00:00 UTC
From: Will McArthur <BIP0LAR@bigfoot.com>
Message-ID: <6fd25sauh1@news.xmission.com>
Source record: 165648

I'm looking for opinions from any/all about what they think is the best scanner. I'm looking to come out of retirement and start another "investigative" business. I have a need for a receiver in the 500khz to say 4Ghz. Or something that cover most of that range. Cell would be nice and I won't feel bad If I have to import it. The only requirment I ask is that solid/verifible "tech" information be provided also. Like...channels,bands,scan rate,battery life,back-lit,jacks & plugs,computer interface,...etc...you get the idea.

I have plenty of roon in my box so "full" it up! {with the requested information only...spammers will have thier phones [you fill in the blank]

Thanks in advance.

3168. Rogue Cancel Summary for rec.radio.scanner | alt.radio.scanner

Hi All,

The following is a list of articles that were Illegally cancelled by someone
at Rockwell Automation. If your name is on this list, you may want to send
a complaint to "unix-admin@mke.ra.rockwell.com". I have the headers of the
cancels if you need them.

The following article posted by Pantsmaster <pj6bn@herts.ac.uk> was Cancelled:

http://x4.dejanews.com/getdoc.xp?AN=335545356&CONTEXT=890886000.1876557825&hitnum=7&AH=1

The following article posted by Stuart Underwood <stu@harborcom.net> Cancelled

http://x4.dejanews.com/getdoc.xp?AN=335521537&CONTEXT=890886288.1875968149&hitnum=0&AH=1

The following articles posted by malexder@aol.com (MAlexder) were Cancelled

http://x4.dejanews.com/getdoc.xp?AN=335582532&CONTEXT=890887302.1884749929&hitnum=8&AH=1

The software packages that use a sound card do not interface to
your computer the same way as HamComm does. HamComm uses a simple
op-amp that plugs into your serial (or COM) port. The purpose of
the op-amp is to take the continuously-variable voltages from a
speaker lead, and turn it into a binary voltage. By binary, I mean
that the signal coming out of the op-amp and going into your COM
port at any instant will be at one of only two possible voltages.
Your computer can then understand the converted audio signal as the
"ones" and "zeros" that it uses to process the data. HamComm is
not the only package that uses this style of interface, there are
dozens of programs that use this methood, and read different types
of data. Since HamComm is the most famous, this interface is
referred to as a "HamComm-style" interface. For information on
HamComm, with a parts list and diagram, check out:
http://www.accessone.com/~tmayhan/

There are also many software packages that will receive and send
different types of data via your sound card. With these, you simply
connect your audio source to the audio input of your sound card.
If you wish to transmit, then you would use the audio output of
your soundcard to drive the microphone input of your radio, and
would construct a simple circuit to operate the push-to-talk
switch in your radio from the computer.

Any Ham should also be offended by the antics of John Mackey.
If you're going to be righteously indignant then you should start by
posting with your real name and not an AOL screen name.

Try 866.562 for the GSP and 867.762 for the turnpike if you do not have a trunk tracker. Even though it's a trunk system they seem to always come up on these same freqs.

Yes, I thi several times,
nothing about to remove the hex dump from screen.

The program is running,
but some users I cant read ?
Others I do.

I set the syncbyte's etc in to a startup BAT file,
but the are all the same at all the channels,
that isnt the problem.

Also info about the subject from the different control bytes #1 #2,
is welcom.

So when possible to give me some info to get started with,
will be very helpfull to.

AUSTRALIAN CBRS EMERGENCY SERVICES DIRECTORY

A.C.R.E.M. - NSW would like to compile a directory of all Australian CBRS Monitoring groups, for distribution amongst these groups. The purpose is to allow Monitors to contact other Monitors should the need arise (such as during 27MHz "Skip" calls, when a call from far, far away could be taken).

We are looking for the contact details of ANY Australian CBRS Emergency Monitoring organisation, or any organisation that partakes in this form of operations, so we can send them a letter detailing the proposal and seeking the relevant contact details.

If you know of, or are involved with, such a group, PLEASE advise us of their contact details (preferably for the head governing body), or ask them to contact us. Even if you think we may already have their details, our information may be out-of-date so please let us know anyway, just in case!

Messages can be sent to E-Mail: acrem-nsw@swl.net
OR, by Fax to: (02) 4990 7751
OR, by mail to: Australian CBRS Emergency Services Directory
A.C.R.E.M. - NSW
P.O. Box 719
CESSNOCK NSW 2325

Thank you.

If you are worried about offending anyone, then why do it? It doesn't make sense to alienate potential customers but if that is your particular marketing strategy, good luck.

Hello ScanFans:

A visit by a friend with a new scanner caused me to
realize just how deaf my trusty '210 XLT has become
over the years.

Anyone know where service information (schematic,
board layout, component location, block diagram etc)
for this unit might be found? I think it's time to tighten a
number of those Little Loose Screws I found in there...

Thanks in advance

John

That's funny, by your own admission on my posting to try and sell this same radio, you commented it was only WORTH $500, even in MINT condition.

Gee, I wonder why you are now asking $150 more than what you yourself said the radio is worth. I believe this is an excellent example of your lack of integrity. Accordingly, all potential buyers of anything that you have to sell now, and in the future, should be more cautious. Have a good day!

Additionally information to all potential buyers and/or sellers
dealing with Mr. owodunni:

I've received an e-mail message from a gentleman who has also had the
displeasure of dealing with this guy. Apparently Mr. Owodunni offered
an extremely low offer on somethig this gentleman was selling. When
he declined the offer, Mr. owodunni replied with one of his
inappropriate and graphic displays of the english language, which I
may add is somewhat lacking. Have a good day folks!

John, I guess the best indicator, is the number of people who have
made posts with statements such as...

John, Your a MORON!
BACK IN THE BOX MACKEY
Get a life Mackey
John (many assorted expletives deleted)

and on and on.

Now, many of these have come from people or posters that cannot
be verified as being an actual poster, so let's discount posters
that do not use a real name, real ISP (Meaning not ISPs such as
USA.NET) and perhaps people who do not use a callsign. Only
take posters who have at least 2 of the above.

Looking a Dejanews, it clearly shows HUNDREDS of people who
fit the above description making comments such as above.

Your Wave file sounds like 4800bps data to me. The packets seem to be
random which could indicate a busy mobile system. However, it could
also be a link for pretty much anything.

The no-longer made PRO-2005/2006 are very popular and considered
classics. The current PRO-2042s are quite nice; they're not quite
the receiver the 2005/2006s are but they have a LOT more features.
All of these can be controlled via hardware board and computer
software making them killer monitoring stations.

> And what about other companies? ... Also are there any base scanners
> that can recieve 1-1Ghz? all of the scanners i have now start at 30 Mhz,
> i am missing out on all the lower bands...

As for the typical American brands(Uniden/Radio Shack), you'll only
get VHF/UHF while keeping prices in moderation. For HF coverage,
you'll have to go the "exotic" route and get an AOR or iCOM...and
of course, expect to spend $1000-$2000.

The newest breed are the "stock" computer controlled radios...
iCOM IC-PCR1000 & WiNRADiO WR-1000i. Both go from 500kHz to
1300MHz but can only be used with a computer. The PCR1000 is
a "black box" while the WR-1000i is an ISA card. Either will
run you about $500.

Strong signals,

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

In this clip from the documentary Sonic Outlaws, the rock band Negativland show how to use "found sound" -- particularly sound grabbed from the airwaves -- to make a political and artistic statement. It's hilarious--especially as we listen in on a gay couple having a spat, and then see how Negativland uses this audio in its music.

> thier phones [you fill in the blank]
>
> Thanks in advance.

Sounds like with your "requirements", you may need to
hire a consultant to do that kind of work for you. It's
not likely any freely submitted information here will
meet your critical and exacting needs. Nor would you
want to "bank" on any such.

Also, with your need for 500 kHz to 4 GHz, you're going
to have to consider some discrete specialized equipment.
Nothing of that nature comes in one package. You'll
need to assemble a system from separate components, much
like putting a complete stereo system together.

For your situation, there isn't any "best" of this and
that. The entire scope of your operation has to be
considered and taken into account....no small task.

Sounds like an engineering problem to me. IMHO.

Actually Bill Cheek quit responding to The Idiot Mackey about a week ago. That won't stop TIM (The Idiot Mackey) though. If you had any historical perspective you would know TIM (The Idiot Mackey) is like the energizer bunny. Toward the end of 1997 he set a USENET record for the most off topic posts in a 30 day period, 397 I believe was the number. TIM (The Idiot Mackey) has since averaged about 200 off topic messages a month. TIM (The Idiot Mackey) does try and fake a scanner related message every so often. You will notice he usually does this right after somebody makes an issue how worthless he and his posts are.

Now the technical side of it all. You may have read about killfiles and such things to battle folks like TIM (The Idiot Mackey). They aren't needed. All you have to do is look at the subject or author before opening a message. If it says KA0SSF in one of its many forms you know you have message from or about TIM (The Idiot Mackey) simply skip it. He has yet to post anything of importance to this newsgroup so this simple technique will remove 90% of the turdage that seems to be bringing you down.

Since the feds let go of the system and the public as a whole was allowed to use the Internet, USENET has been a haven for all the freaks, geeks and misfits like TIM (The Idiot Mackey). You just have to ignore them. OTOH, with the antics of TIM (The Idiot Mackey) it makes the real contributors messages even more of a find when they appear.

Don't let it get to you John L.

Glenn

Icom IC7100 scanning receiver for sale. 900 memories. Full freq coverage from 25Mhz to 2000Mhz continuous coverage, no gaps. All modes, many types of scan and search functions. Terrific rx, little or no intermod from this baby. This is a great radio/scanner. You can add a CT17 interface and then control the radio from a computer. I can send the brochure to you as an attachment in pdf format.

$800 plus shipping.

How is it wrong John? Read what I said. The question pools
have been available since back in the Dick Bash days. Did I
say that they were available from the FCC? No. They were
available from Dick Bash.

The end result, is the same. The question pools WERE available!

>However, I do believe you are familar with the Bash Books. :)
>
Just like you are John.

>Actually, Dick Bash was interviewing

Would you believe that the reason is because the SC is junk.
The cell phone calls you are hearing in the 900mhz range are images of
something going on in the 870-894mhz range--the true freqs where the
cellphones operate.

Over the years, R.S. has made a number of weather recievers, weather cubes & weather alert radios. I have a couple. Anyone possibly have a set of R.S. catalogs and be able (in spare time) to assist me in putting together a list of each unit, year made and catalog number? It would be greatly appreciated. Thanks for reading
Regards,
Ray Miller N2NJK

The SC only has double conversion while the newer radios such as the 895 have triple conversion. To some people this makes them "junk", to others it makes them very useful. If you like to listen to cell, an SC w/ double conversion may be better, but if you want to listen to exactly what is there then the 895 is the way to go.

It sounds like a cellular control signal. It could be an image of
880.450 or 880.250 MHz (both within the cellphone band), depending on
what I.F. your scanner uses.

All very true. One important sidenote: don't call 9-1-1. Use the "regular"
number to the police department instead. Not only is 9-1-1 for emergency use
only, but *67 will NOT block your name, address, and telephone number from
appearing on the 9-1-1 computers.

I believe most law enforcement personnel feel this way. The small number of
criminals who use scanners for illegal purposes is more than offset by the
number of tips they receive from concerned citizens who hear of suspicious
activities on their scanners and report them to the police. Unfortunately, the
two-bit politicians in Congress don't get it, but then again, they never do.

matter

Not exactly. The 4th Amendment only protects the defendant against use of evidence illegally obtained BY THE POLICE, not by neighbors or other non-governmental parties. Even illegal evidence can be used for impeachment of the defendant's credibility if he takes the stand in his own defense and then tries to lie about his actions.

So, the jury may or may not be able to hear the phone calls, but they may still be made aware of them under certain conditions. It is most likely that, if charges were filed, the case would never even go to trial. If the prosecutor has a strong enough case, the defendant will usually plead out in exchange for a lesser sentence.

Source record: 165448

Carl Steckler wrote:
> could someone please tell me the quick and dirty way to program the
> search banks on a Yupiteru MVT-7100? Nice scanner, no manual.

Recalling from memory here :
1) Start in VFO(i.e. not in memory) mode
2) Set desired step size and receive mode
3) Press FUNC + BW
4) Enter lower search limit freq
5) Enter upper search limit freq
6) Enter search bank # to store to(0-9)

Not too sure about step 2. It might actually be prompted
for between steps 5 & 6. Just pay attention to whatever
is flashing. You'll figure it out.

To use, just press the search bank number(up to 4 banks can
be specified) followed by SRCH.

To lockout a frequency you have stopped on, press FUNC + PASS.
To review the locked out frequencies, from the VFO press
FUNC + SPR. Scroll through the list using arrow keys or
rotary control. Unlock a displayed frequency the same way
you locked it.

Great radio! Have fun!

Strong signals,

I have just acquired one of these scanners and the battery is flat. It is charging as we speak. I am curious as to whether or not you are supposed to be able to use it on the AC adapter only or whether this is only for charging the battery. It says in the manual you can use it when it is being charged. If it is being used for longer periods of time is it wise to keep it connected to the AC adapter so it will continuously charge while it uses the battery power?

Also (while I am at it) why make it so you can only work it off the power coming from the battery - seems silly since you can only charge the batteries while they are in the handset so you can't have spare ones charging while the other set is being used.

It strikes me that the battery pack is just 4 AA ni-cads. Is it possible to use standard rechargables in some sort of adapter, they could be charged in just 2 hours as opposed to the 14 it says here in the manual.

Scoops

Dave Shaffer wrote in message ...
+AD4-Summary: New BC235 works great, but antenna seems suspect...
+AD4-
+AD4-I had recently sold my bc200xlt to upgrade to a 235 trunktracker. The
+AD4-bc-235XLT arrived this AM. Had time to program it before I left the office
+AD4-and test drive it on my trip today and home. I put my old 100xlt on the
+AD4-seat next to it for comparison. First impressions:
+AD4-
+AD4-Good news: It was easy to program, even the trunked channels. It picked up

+AD4-most strong signals first (before the 100xlt), which I attribute to the
+AD4-scan speed. The trunk tracking works perfect in State College, the place I
+AD4-went today and (conveniently) the only place in the immediate area using a
+AD4-trunked system.
+AD4-
+AD4-Bad news. Is is harder to read, the characters on the display are smaller.
+AD4-It seems to have less volume than the older handhelds. Last but not least,
+AD4-it did not seem to be as sensitive to marginal signals, and important issue
+AD4-in the rural area I travel. It completely missed some signals caught by the
+AD4-100.
+AD4-
+AD4-Question: Have you seen anything one way or the other on the antenna
+AD4-performance? After a while, I tried swapping antennas, and the 235
+AD4-performance improved dramatically+ACE- (The 100 performance dropped off
+AD4-accordingly.) Is the antenna on the 235 tuned specifically for the 800 mhz
+AD4-range at the cost of reception in some other areas (which would make sense
+AD4-since it is marketed as a trunk tracker)? Maybe the old 100 antenna is
+AD4-better tuned to a broad range of signals+ADs- at least it certainly seemed to
+AD4-perform better with the 100 antenna.

Rob,

I have several antennas: a RS discone, a 2-meter Ringo Ranger, a converted TV antenna, a homemade 49Mhz ground-plane, and a multi-band wire dipole. I have found the discone to be terrible on cordless phones. The dipole isn't much better. I found the 2-meter antenna suprisingly good on 49 Mhz. I then built a vertical ground-plane antenna specifically for those frequencies, and it does a little better than the Ringo Ranger. A TV antenna is also pretty good, as long as you mount it with the elements vertical as apposed to horizontal, since the frequencies you will be receiving are vertically polorized. Also, any antenna made for the six-meter ham band should work well, although I have yet to try that.

Paul

3264. Are ISA based PC radio cards like Winradio doomed?

Newsgroup: rec.radio.scanner
Date: 1998-03-27 00:00:00 UTC
From: Victor Healey <fourphun.hates-spam@bellsouth.net>
Message-ID: <%NQS.406$ZL.938307@news2.atl.bellsouth.net>
Source record: 165459
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Are ISA based PC radio cards doomed in less then a year? Some can be had for $20 and others are $500 to
$2000 and more. I recently mentioned the future of ISA is dead. I also mentioned it is wise to remove ISA cards from your PC now to improve performance A few got angry. Please no flames the following may be of benefit to you.

FYI Here is a reference in this weeks news
(http://www.zdnet.com/zdnn/content/pcwo/0325/297802.html)
off interest to some that indicates new 1999 PC's will not include ISA slots.
"Stork outlined Microsoft's efforts to migrate developers from legacy technology, such as ISA, which is no longer supported under the PC 99 spec, to emerging technologies such as Universal Serial Bus and IEEE 1394."

I know there are some who have no intention of buying the new technology so again please no flames. The purpose here is to indicate where the PC industry is
going and how soon. This information may be of vital interest to some who don't want to be caught holding obsolete items of little value. I am careful to dump items that are becoming obsolete while there is still a market for them before I lose too much. I figure that it is ok to let the less informed 'eat it'. <wink>

Others may not share this view and may even prefer buying obsolete technology. For instance I am sure there is someone somewhere who is in the market for and 8086i based computer or perhaps a Z80 based system. These once sold for thousands of dollars. Today I think $20 would be overpricing these items.

How soon will it be before an expensive legacy ISA based radio card or sound card is
considered worthless? I am certain based on other information it will be a lot sooner then many would think.

Do you really want to 'eat an expensive one' ?

Possibly someone would like to research and expand on the above for publication in a hobby related radio publication.
I don't mind and if I can be of help let me know.

3265. Atlanta Real-Time Traffic Map and Video, Part 1

Newsgroup: rec.radio.scanner
Date: 1998-03-27 00:00:00 UTC
From: Victor Healey <fourphun.hates-spam@bellsouth.net>
Message-ID: <x_QS.408$ZL.948002@news2.atl.bellsouth.net>
Source record: 165460
Cross-posted to: alt.radio.scanner,rec.radio.scanner

If you hear of a massive accident on the Atlanta interstate system you can pull up a live still snapshot of it from the all of those TV cameras that the DOT has mounted on poles and towers around town just like the police can. These cameras are now back online at http://www.georgia-traveler.com/traffic/video/index.html with an improved interface. If you leave the photo on your desktop it will automatically update every four minutes or so all by itself. To use just click on any camera on the map to turn it on and get your feed. If you are using MSIE 4 right click on the picture and select zoom in to get a better view. You might try these cameras also to see if you can see any action from tornadoes when they roll through town.

There are other live cameras online sponsered by TV stations and such also for our area but none have so many as the DOT project.

Others who don't live near here may want to check this out just to see what is coming to your area as this is part of the demonstration of new technology for transportation management http://www.atlanta-traveler.com/traffic/rttraff.htm which we inherited from the Olympics. If a DOT operator spots a breakdown while scanning these cameras he dispatches a yellow/green HERO truck to assist the motorist. I am still trying to find the actual working frequency these guys use. I have heard them on Dekalb's trunking radio system but I don't think they use that area wide.

Anyone?

This would actually make a nice article for Scanning USA or Monitoring Times IMHO if someone wanted to pursue it.

Would you like to know more about an exciting addition to scanning from your home that may be coming to a city near you? Are you concerned about losing money with rapidly devalued PC hardware? These two tips may interest you.

Here are a few notes about the Atlanta Travelers Showcase I mentioned here yesterday.
The Atlanta Real-Time Traffic Map is at
http://www.atlanta-traveler.com/traffic/rtmap.htm
This map displays data regarding speed with red dots indicating less then 30 MPH yellow dots speeds up to 50 MPH and green dots anything well over 51 MPH which around here can reach 110 MPH as those of us who listen to the radar laser traps well know. This map does not auto update so you must hit F5 (MSIE 4 users) to refresh it from time to time. Where are they getting the data?
I believe these are the poles you see near certain interchanges with small gray boxes about the size of a halogen light mounted two to a pole pointed across the interstate. If you drive in this area notice that they point in slightly different directions. I have seen these boxes mounted on signs and on the underside of some bridges. They register as a relatively weak signal on my radar detector. Sometimes they register as VG2 detection but I believe they are not VG2 units but are operating close to that frequency. Update that map during rush hour and watch the dots change down to RED! You can click on a dot and get more information for the detector it receiving data from, specifically what part of the roadway it is targeting. If you hear an accident on your scanner look at this map and watch the dots turn to red as traffic backs up.

Try http://www.georgia-traveler.com/traffic/incident.htm to see the type of data used by the radio stations in their traffic broadcasts. There is a no charge speed dial on your Airtouch Cellular to input information to these folks. Of course this isn't the only source of information used by those giving traffic reports unless they are a really cheap station. Most radio stations take reports from listeners like WSB AM 750 or WGST AM 640 http://wgst.com/ - speed dial *640 which also has a plane and helicopter up most of the time during rush hours. I was giving *640 a report on a traffic accident at The Cobb County I-75 / I 285 interchange when I saw a massive multi-car pileup occur which blocked all lanes of I-285 near Northside Drive the other day. The West bound interstate is seven or eight lanes wide at that point and since it eventually included a bus it took about an hour to get it moving again. That is the type of problem we have in this area all the time. These accidents are like ping pong balls on a pool table. People drive well over 50 mph on each others bumper until some higher speed cue ball hits them. We had one during morning rush hour involving 24 cars a

month or two ago.

You can see the actual carnage using the real time video cameras at http://www.georgia-traveler.com/traffic/video/index.html .This opens the picture for a given camera in a frame. Here is a trick. Right click in that frame and select 'open frame in a new window' from MSIE 4 popup menu. You can then save that as a favorite and have that location open anytime you want from the Favorites menu. Turn off toolbars and the status bar and you can have six or so pictures display well on your PC. These will update automatically every 240 seconds. You can force an update sooner using F5. You can also select http://www.georgia-traveler.com/traffic/video/connector.htm to see all the camera shots for downtown on one page. There is also http://www.georgia-traveler.com/traffic/video/upi75.htm for I-75 NW and http://www.georgia-traveler.com/traffic/video/upi85.htm for I-85 NE. It is neat to load some of these before sunrise and watch the view change as the sun come up between 6:00 and 6:30 AM EST.

The fun part is matching your browsing to the traffic from your scanner monitoring. But most of you who read this can not do so because you don't live within range of Atlanta VHF and UHF. Or can you? How about trying the real audio broadcast of WGST AM 640 http://www.radio.audionet.com/radio/News/WGST/ which you can get over the Internet. If you know Atlanta you can figure out which camera to check and match it to their reports. http://wgst.com/html/trafficttn.html

Someday many cities will be set up similar to Atlanta's Information showcase.

One last note on a slightly different subject are ISA based PC radio cards doomed in less then a year?
FYI Here is a reference in this weeks news
(http://www.zdnet.com/zdnn/content/pcwo/0325/297802.html)
off interest to some that indicates new 1999 PC's will not include ISA slots.

The AJC has an article in today's paper by Joey Ledford that provides more information on Atlanta Real-Time Traffic.
Instructions are in this article for giving traffic information to the DOT for the benefit of others motorists. People who monitor a scanner and who have either a ham radio or a cell phone can join in the fun. Please don't make the mistake I made yesterday though. I though I was on to something big while listening to the Cobb County GA Trunking radio system. A chemical explosion and flash fire after a delivery driver dropped a 55 gallon drum, the first fire truck in staged 600 feet away out of fear and caution, person reported down in four story building from fumes, lots more rescue and hazmat equipment called, hazmat arrived, four more fire engines were called by hazmat after accessing the situation, extreme caution, etc.... I tipped WGST to what sounded like a fantastic breaking news story only to learn about a half hour later the darn thing was a another drill! Cobb County home of Lockheed- Marietta and Dobbins AFB is definitely serious about getting ready for unknown biological or chemical problems!

DOT plotting course for Navigator
March 27, 1998
By Joey Ledford, The Atlanta Journal-Constitution

Concerned that scores of metro motorists remain woefully unaware of its multi-million dollar Navigator traffic management system, the state Department of Transportation is launching a public awareness campaign next month
....

Actually they are in the 902 and 928 range.... you wont hear much
because most of those 900Mhz phones have a bigger bandwidth than you
ordinary scanner can pick up...
Someone correct me if im wrong...

True, although any non-public radio comms could be considered under the Law
as "private communcations" as the scanner user was not the intended reciever.
IMHO- I treat all my radio comms, whether 2-way radio, cell, cordless as
radio, and a such not a secure communication.

>>>>But owning a cell capable scanner is legal, as long as it can receive

sessions, the previous several weeks and the best information from the
end of last year.

I'll be updating this all year long with the help of your contributions.

3282. Differences between radio shack PRO-2040 and BC895xlt

Newsgroup: rec.radio.scanner
Date: 1998-03-27 00:00:00 UTC
From: Austinpillman@webtv.net
Message-ID: <6fgsrl$5mm$1@newsd-122.bryant.webtv.net>
Source record: 165477

Recently , I purchased the BC895XLT and I'm unable to pick up any 900mhz frequencies,(cordless phones), but about two months ago I purchased the PRO-2040 by Radio Shack and I could pick up those 900 mhz frequencies. Since the BC895XLT is a much better scanner, why isn't it picking up these frequencies? Also, is there a way you can reset the scanner to have no memory.(just when you first bought it). Thanks ,Dave M.

Hi,

I am wandering what handscanner i should buy.
For use at home I have a AOR 3000 A and I am planning to hook this baby
up to my PC.

What hand held scanner is good ?

Kind regards,

Roger

3291. Re: Las Vegas N.V. ALL FREQ'S Needed

Southwest Frequency Directory has just completed a new Nevada Edition. It covers the Las Vegas & Laughlin (Clark County) areas. The book is over 60 pages, and includes frequencies, channel numbers & uses, PL tones, fire station locations and apparatus designators, radio codes, trunktracker talkgroups for casino 800 MHz systems, Metro PD District maps, general agency information and more. Also includes frequencies for railroads, aircraft, recreation, schools, utilities, etc. Sells for $18 shipped, and is available from Southwest Frequency Directory. E-mail DanR@azstarnet.com for more information.

Problem is, asswipe, you have been proven to be a habitual liar.

You just retyped an old message you had from Cheek from many moons ago.

Care to try again, FOOL ?

ka0ssf@parg.org
ka0ssf@parg.org
ka0ssf@parg.org
ka0ssf@parg.org
ka0ssf@parg.org
ka0ssf@parg.org

Loony, was that a new address that the spambots hadn't harvested yet ?

Why do you have a new address when you bragged about your usa.net account being with you for life - no matter how many times you changed providers? Oh.....I forgot. Because it got YANKED!!!

Also, why do you keep changing the way your name appears? Are you, as usual, trying to get past Cheek's kill filter (and other's) to keep stirring up your normal shit ?

You're pretty pathetic, loony toon.

>NEW AR8000,shipped $404>>>see the URL
>http://www.multicomm2000.com/page3.htm

Come on guys, stop posting this BS. Sure, you can buy a new AR8000 (unblocked) from Multicomm in England for $404, but it's NOT legal to import it into the U.S. because they're banned here...only the AR8000B is legal because it can't be modified to receive cellular phone frequencies.

Yes, Multicomm will ship it here, but that still doesn't make it legal and you take a real chance it will be confiscated by the Feds before you get it...maybe even after you get it if the Feds start to investigate this illegal activity and get a hold of Multicomm's shipping lists. Knock knock...who's there? ;)

However, it is legal to buy units that were imported BEFORE the ban. That's why used models command higher prices...they're worth it because you can legally own them.

Lets compare apples to apples....okay?

Thanks.

<3518BA52.D0A@usa.net>...

> I'm coming from USA.NET right now so YOU must be the one
> lying!!!

Come John. The path in your header (reproduced below) says you using the
sprintisp news feed.

Path:
news.internetMCI.com!newsfeed.internetmci.com!205.137.196.70!news.sprintisp.
com!sprintisp!not-for-mail

See the last entry? That be you John! Sprintisp. Now USA.NET does allow
sending of mail from their WWW site but not direct posts to USENET. You
would need a mail to news gateway. Looking at the header again it seems
that that isn't the case here. What gives here? Everything says you are
using the Sprint newsfeed but you are saying you are posting from USA.NET.
Care to explain?

Sorry, but my Linux box doesn't support RealVideo, so I can't view the
cut you mentioned... Is it per chance the "WR6ABM - Repeater" stuff?
(Or maybe the later 145.29 repeater). "Hemorhoid" was a big word with
some of that stuff... or there was "Mitch" the parcel delivery driver.

I'd hardly call that "found" stuff... 20 years ago, when WR6ABM still
existed as a repeater, many of the transmissions going over that repeater
were, IMO, bootleggers "hamming it up" for the Over The Edge show on
KPFA.

You're right though, that shit was funny, but so was the stuff which
came over the phone lines from callers using landlines.

"If any of you are into jamming, keep talking, keep jamming,
because I'll be listening on my scanner radio, and just maybe,
you'll be on the next album."

My Pro-43 has a problem. I realized I left it turned on for a couple weeks. This, of course, killed my batteries. No problem, I put in fresh batteries and the radio works, but when I turn it off and on again, all the channels I programed in are gone and all channels have zero's in them.

Any ides on how to cure this agrivating problem?

Thanks for any help you can provide.

John.

3312. Re: Request for Texas Frequency Listing

Newsgroup: rec.radio.scanner
Date: 1998-03-27 00:00:00 UTC
From: dpems500@aol.com
Message-ID: <1998032705075700.AAA27115@ladder01.news.aol.com>
Source record: 165562

>If anyone has a frequency listing for Travis and/or Williamson Counties in
>Texas (police, fire, emergency, etc.), please send them to me.

David:

Below, I have forwarded a (poorly formatted) list of frequencies for Travis &
Williamson Counties.

Travis county EMS/Fire is still on UHF & VHF (I believe). Williamson County
has moved to 800, but the EMS still "alerts" on UHF (Med 10..462.975).

Hope this helps.

David

<6f8st5$ag9@freenet-news.carleton.ca>...
>>>Isn't legal language wonderful??? IMHO it is vague enough that charges
>>>could be filed, if there was a compelling reason to.

I read all that I could and could not find any law that states that you may
not listen in on non-scrambled, radio-based telecommunications for fun.

>>>But owning a cell capable scanner is legal, as long as it can receive
other frequencies ie; weather, marine
>>> ham et al. So if the scanner is full spectrum there really a problem. If
the device only received cell it may >>>be illegal.

I couldn't find any laws to back up this statement.

I attached all that I found concerning radio phone communication at the
bottom of this post. I also attached a link to the page where I found this
information, lots of digging!

http://canada.justice.gc.ca/STABLE/EN/Laws/Chap/C/C-46.html

Thank you for posting the address' to these informative sites. If you find
the law that states that it is illegal to listen to cell phones I would be
interested in reading it myself.

This is what I found:

"private communication" ◆ communication priv◆e ◆

"private communication" means any oral communication, or any
telecommunication,that is made by an originator who is in Canada or is
intended by the originatorto be received by a person who is in Canada and
that is made under circumstancesin which it is reasonable for the originator
to expect that it will not beintercepted by any person other than the person
intended by the originator toreceive it, and includes any radio-based
telephone communication that is treatedelectronically or otherwise for the
purpose of preventing intelligible receptionby any person other than the
person intended by the originator to receive it;

"radio-based telephone communication" ◆ communication radiot◆l◆phonique ◆

"radio-based telephone communication" means any radiocommunication within
themeaning of the Radiocommunication Act that is made over apparatus that is
usedprimarily for connection to a public switched telephone network;

Interception of radio-based telephone communications

184.5 (1) Every person who intercepts, by means of any electro-magnetic,acoustic, mechanical or other device, maliciously or for gain, a radio-basedtelephone communication, if the originator of the communication or the personintended by the originator of the communication to receive it is in Canada, isguilty of an indictable offence and liable to imprisonment for a term notexceeding five years.

Disclosure of information received from interception of radio-based telephone communications

193.1 (1) Every person who wilfully uses or discloses a radio-based telephonecommunication or who wilfully discloses the existence of such a communication isguilty of an indictable offence and liable to imprisonment for a term notexceeding two years, if

(a) the originator of the communication or the person intended by the originatorof the communication to receive it was in Canada when the communication wasmade;

(b) the communication was intercepted by means of an electromagnetic, acoustic,mechanical or other device without the consent, express or implied, of theoriginator of the communication or of the person intended by the originator toreceive the communication; and

(c) the person does not have the express or implied consent of the originator ofthe communication or of the person intended by the originator to receive the communication.

Other provisions to apply

(2) Subsections 193(2) and (3) apply, with such modifications as thecircumstances require, to disclosures of radio-based telephone communications.

1993, c. 40, s. 12.

Possession of device to obtain telecommunication facility or service <<<<<<< please note the last three words ((this law is about stealing phone sevice, not a device just for listening))

327. (1) Every one who, without lawful excuse, the proof of which lies on him, manufactures, possesses, sells or offers for sale or distributes any instrument or device or any component thereof, the design of which renders it primarily useful for obtaining the use of any telecommunication facility or service, under circumstances that give rise to a reasonable inference that the device has been used or is or was intended to be used to obtain the use of any telecommunication facility or service without payment of a lawful charge therefor, is guilty of an indictable offence and liable to imprisonment for a term not exceeding twoyears. Forfeiture

(2) Where a person is convicted of an offence under subsection (1) or paragraph326(1)(b), any instrument or device in relation to which the offence wascommitted or the possession of which constituted the offence, on

such conviction, in addition to any punishment that is imposed, may be ordered forfeited to Her Majesty, whereupon it may be disposed of as the AttorneyGeneral directs.

Limitation

(3) No order for forfeiture shall be made under subsection (2) in respect oftelephone, telegraph or other communication facilities or equipment owned by aperson engaged in providing telephone, telegraph or other communication serviceto the public or forming part of the telephone, telegraph or other communicationservice or system of such a person by means of which an offence under subsection
(1) has been committed if such person was not a party to the offence.

1974-75-76, c. 93, s. 24.

Actually, not. John seems to have amassed a quite a bit of lack of
support.

Following the conditions I made, ie verification, or ability, and
checking dejanews, it is quite clear.

>I thought I recognized you from radioscanner BBS, if so, I thought you were
>better than this.
>
Well, I am sorry that I don't live up to your expectations. You will
find that I am one of the milder participants in all of this, and try
to express my views with facts.

If anyone has a problem with that, there is always the (N)ext key.

Have a nice day.

I dunno about you guys up there in the frozen
northland, but down here in the temperate zones,
our lawmakers crank out the laws so fast that we
can't keep track of 'em all. If I said "No" to
your question, some eavesdropping legislator down
here would sachet back into Congress and whup up
an anti-return-loss law just to cover all bases.

So excuse me if I defer........ :-)

> Failing that, I've never heard of anyone going to jail for a short blast
> of 10W on any given frequency! Haha!

Well, I never have, that's for sure. It takes
a little time for the Adcock arrays to zero in on
a signal and they have to be looking for it in the
first place.

> 1.3:1. Honest!

I wouldn't have bet that a TV antenna would ever come
in with a decent VSWR, but then I've never tested one.

They receive, and that's all I ever cared about. Matching
one to precision perfection won't help the receiver, so
I've never dug into them that deep.

1.3 : 1 sounds pretty phenomenal, if you ask me.

> Mind you, if you blasted 1kW through the thing I'm sure the conductivity
> of pop-rivets would demonstrate the limitations.

I rather imagine they would demonstrate how they
got their name, POP-rivets, too. POP! POPPITY! POP!
followed by a KA-BLOOOOEY just for general purposes.

BTW, I used to pump upwards of 8-gallons into an
Avanti Moonraker 6......driven by a 4CX5000A but before
that, I had to go over the thing with a fine-toothed comb
using sheet metal screws in all the joints of the driven
elements to assure the conductvity and minimize I-square-R
losses there. Also had to whip up some new gamma matches.
TFE dielectrics worked pretty good except they still got
hotter 'n a fast-flying fox in a forest fire, so I finally
found me some ceramic tubes that worked great. I'd like to
see ceramic melt.

One other little anecdote.....once upon a time, I made a
11-meter dipole and fed it through a TV matching transformer.
The VSWR was less than 2:1. Worked okay. Then one day, I
lost my presence of mind and let loose with a couple hundred
watts into it. The balun went up in smoke kind of dramatic-like.

(Return loss, my ass........) :-))

Speaking of which, I had a buddy around Vancouver (Surrey)
who got nailed by the D.O.C. for running a linear in his
vehicle. I had to admire their summary justice. They made
him remove it from the car and lay it on the pavement and
then gave him a sledgehammer and a choice.

1. Suffer the consequences of prosecution, or

2. Beat the shit out of the linear with the sledge.

He beat the holy hell out of it. They tore up the
citation; shook his hand; and left.

I heard about it that evening over the landline. He
was sniveling and crying like a whupped pup. It was a
big ol' 500-watt Varmint linear, too. Expensive......

I cried right along with 'im.

to put it simply ....No.
Sounds like your trying to eavsdrop on a friends pager to see who pages
him... not good.

Rob: About the only way an R.S. Discone will beat what you're Useing now
below 100 mehz. is if the coax has become disconnected.--- Discones , (
even with the loaded vertical) just don't hear well down
in those Freqs.
I checked the net for the answer for guite a while with same results
you're getting "bout 50/50 got some
replys as complicated as quantum physics,
PLAIN TRUTH IS THEY DON'T HEAR VERY GOOD ON LOW FREQS

I have an absolutely BRAND NEWT AOR 3000A. Unwanted xmas gift.

There is nothing wrong with this radio. I have way too many and need
to sell some to make room for new toys. The 3000A comes with the
following:

* Software and computer cable
* AC adaptor
* Original owners manual (hardly touched)
* Telescopic whip antenna

I'll throw in a free discone, if the buyer is active on this newsgroup.

Thanks!

Actually an even better Idea would be to use common sense when using a [RADIO TRANSMITTER] believe it or not that's what a cell phone is. I don't know about you but if I was using a radio transmitter I definitely wouldn't put out any personal information. You wouldn't transmit your credit card numbers over the radio would ya. I sure as hell wouldn't.

> I bet putting "Say no to murder" PSA's on TV would stop murder. right?

I believe the point I was trying to make in the first place was the law isn't going to stop anything. Even scanners that have been locked out can be converted. Have you ever heard of frequency harmonics.

and NO I am not politically correct if I was I would have to agree with this law wouldn't I. Politically correct means that you agree do and believe what ever the government tells you to like Bill Clintion and his new socialist Raychem. Clintion and the FCC are really getten fat. I hope he likes his money.

You keep asking too much for this radio, ask the same price for it
that you told everyone on this newsgroup the radio was worth last
week, $500 $500 $500 $500 $500 $500 $500.............................
THE SMART PEOPLE ON THIS NEWSGROUP ARE CATCHING ONTO YOUR UNETHICAL
BUSINESS PRACTICES. YOU CAN RUN BUT YOU CAN'T HIDE.
See what happens when you stick your nose in someone else's business,
you've gained a friend for life.

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. I found these at Dayton one year and bought up all
the guy had. Lot of 10 grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

Hey stupid, that's the gentleman's of telling you to shut up in a nice
way. Since you didn't get the message, I'D had to spell it out for
you!

3338. 900 MHz Cordless Frequencies

Newsgroup: rec.radio.scanner
Date: 1998-03-27 00:00:00 UTC
From: Art Davis <artellad@hitter.net>
Message-ID: <351B88A2.5040@hitter.net>
Source record: 165588

After searching dejanews and related web sites, I was not able to find any specific frequencies for the 900 MHz cordless phones so I could avoid tuning in to them. I think general ranges are 901-902, 930-931, and 940-941. Could someone either send them to me at my antiSPAM address (replace "*" with "a"), or respond by posting. Thanks in advance. Art.

>Can you tell me if these radio is good?

It's great if you paid $100 for it; it good if you paid $200 for it; and it's okay if you paid $300 for it (although I wouldn't).

The two best modifications are to install an OS535 interface for computer control and Programit interface for autoprogramming it via your PC. Nope, you won't get cellular without jumping through a lot of hoops that involve obtaining a new CPU, or logic board, or a hard to find version of the OS535 from an overseas supplier.

3342. RS Has Good Deal on PRO-64

Newsgroup: rec.radio.scanner
Date: 1998-03-27 00:00:00 UTC
From: malexder@aol.com
Message-ID: <1998032713231800.IAA04858@ladder03.news.aol.com>
Source record: 165592

I haven't checked personally, but I've been told that the PRO-64 is on sale at RS for $179 and if you pick up a flyer in the store or by mail you can get the scanner for $149. Now is the time to buy if you are looking for a good value in a handheld. It's got triple conversion, 400 channels, 40 monitor, 10 priority, weather key and computer programmability. It was initially priced at $399.

Body handling: HTML body converted to readable text

Dog, The Pro-2035 is very similar to the Pro-2042. in fact you can interchange the logic boards and the radio will function. The 2035 appeared in the RS stores in 1995, I believe. And after a short life at RS the 2035 was "de-valued " and quickly was decreased in price down to $299.00, Then it droped by $50.00 increments to $249.00 and then $199.00 the final price RS sold this radio was $149.99 The biggest difference between the 2042 and the 2035 is that the 2035 lacked a few bells and whistels.The firmware sucked. One of the biggest problems, I'm not even going to get into the intermod problems,was if in the AUTO SEARCH AND STORE MODE,with the 2035 you could very possibily end up with 1000 channels with the same frequency. There was no dupe check.Also the 2042 will display " dup " if you program a freq. that is already in memory, but after the warning you can still program it. The 2042 skips over 000.000oo channels, the 2035 will not. There are a few more changes in the 2042 if you are really intrested in them,e-mail me at ; scanist@acmenet.net

>those two might make a difference.

Here lies the key. By design, your antenna has high-gain in the cell bands, and rejects all other frequencies. You're going to get cell images all over the radio, and probably 931 MHz pagers, too.

Head to Radio Shack and upgrade to a mag mount scanner antenna. Then, head to the car dealer and upgrade to a '98 Crown Vic.

Just kidding on the latter. That won't affect reception at all. :-)

>

Are they doomed just because of the ISA slot? No, I don't
think so. There is still going to be systems out there in hobbyland
that will still handle these ISA cards quite easily. Bill Gates might
have some influence, but he won't order his thugs to go out and search
every house to make sure that everyone has upgraded to the latest and
greatest systems and have registered copies of his latest software.
Is a ISA slot scanner/radio the greatest thing since sliced
bread? No, not hardly. I know there has been some smoke being blown
about the different PC based scanners/receivers such as the WinRadio
and the Icom. Is the 8MHz speed of the ISA slot any more beneficial?
No, I have DOS-based Probe software running my Pro-2042/OS535 setup
through a lot more channels/second than both the Icom and the WinRadio
combined. I run it in a DOS window in Win95 with no problems. Could a
similar setup work with a wide coverage receiver? Yes, most
definately. The OS535 does cheat a little though. It can run up to
19,200 baud (actually faster but current software doesn't support it
yet), but it uses more than just the TX/RX connections of the serial
port. (Note: currently the only software that I know that uses the
extra two connections is Probe).
Is the serial port fast enough? Yes, it can actually be TOO
fast! The electronics on the receiving end just cannot settle fast
enough for some of the settings that we can set the scanning speeds at
when you are running a little above average systems with Win95. Probe
seems to run a bit faster with Win95.
If data flow is not enough through just the serial port for
some odd reason, then one could design a system that uses the parallel
port. When you get to scanners/receivers who's PLL circuitry is almost
controlled directly from the computer...then the software gets to be
the key. I don't see ISA or PCI based scanners/receivers as the 'wave'
of the future, but it isn't based soley on the new hardware/software.

Wiggie

For the Freq's, check the Central Florida Listener Group page at

http://www.swl.net/cflg

The page has an up-to-date list including the 900 MHz band used at the
new Animal Kingdom Park.

As far as the fences on barges go, that is the Electrical Water Pageant
that cruises the lagoon every night giving a show at each resort and the
Magic Kingdom (when it's open late)

3360. Radio Shack 2029 memory loss

Newsgroup: rec.radio.scanner
Date: 1998-03-27 00:00:00 UTC
From: Steve Daugherty <guitarer@iquest.net>
Message-ID: <351CABE3.638BBE1A@iquest.net>
Source record: 165610

The 2029, if disconnected from power for an hour (or less), loses memory
of all frequencies. There must be a fix for this oversight (battery
backup?) ; my 2023 retained
its memory for months. I keep the scanner blasting constantly, so I
hooked it up to
Radio Shack's "plug 'n' power" remote to shut it off when the phone or
doorbell rings. I
connected the "plug 'n' power" base unit to a di-pole in the attic so I
could probably turn
the scanner off/on from a block away! I forgot to turn the scanner back
on (for less than
an hour) & the frequencies were gone forever (we all know how painful
that can be).
Any cures out there for this problem?

Steve D.

This radio is made for DOD and it has a key board entry LCD read out
Small unit the size of a lunch box. 2 ant inputs a IF output all sma
Connectors.
The LCD Read out shows the following.
Freq.
Sig Strength
Hits
Sql
Time
BW in KHZ
Det
Step Size
CH #
Dwell
AFC
Function
Date
Time
Other thing on the radio are EXT CONTROL connector, Audio Out, Fuse, SQL
Control, Vol/on/off, View Angle, Data/ Power Connector. There is also a
part number (139870) on a cover that flips over the push buttons pad.
It looks like the radio had a tape recorder hooked to the front of the
unit.
I have looked in side this unit it is a very well made radio.

The Alinco is definitely a better looking radio, but the 8000 does recieve so much better and has so many upgrade options. I was also looking at the Alinco and 8000, but decided on the Yupi MVT 7100. Has the great recieving performance at a lower price(not so many options or good looks though.) I wuold get the 8000 if I were you.

I'd have to go with an "airphone" on this one. Many private lear jets use
the 459.6(?)-459.975 range for air/ground duplex phones. You were
receiving the aircraft side of the convo. The ground side has
transmitters/receivers on different freqs. 457mhz range maybe?

Right after I got my 235 TT, I purchased a regular UHF 1/4 wave duck.
It is very flexible, closer in resonance to the 800 frequencies I am
scanning.

Performance is of course good on UHF, fair to poor on VHF HI and
probably very poor on VHF LOW although I havn't checked it there.

Vandenberg Launch Rescheduled...Again

Thursday night's launch of a Delta II missile from Vandenberg AFB was cancelled due to upper level winds. The launch is now scheduled for Sunday night (March 29th). The main events of the launch will be as follows:

Time Elapsed
Event (PST) Time

Launch 22:02:46 00:00
Jettison Six Solid Rocket Motors 22:04:14 01:28
Jettison Three Solid Rocket Motors 22:04:57 02:11
First Stage Engine Cutoff 22:07:11 04:25

Something of interest to look for during a Delta II night launch is a brief orange flash in the direction of Vandenberg at first stage ignition while the vehicle is still on the pad. The sky lights up for about 2/10ths of a second and then grows dark again. This was first reported by Ron Rennie who was watching December's dawn launch from high up on the Palos Verdes Peninsula, a distance of about 150 miles from the pad! Other events to look for (and to atttempt to photograph) are the jettison of solid rocket motors from the first stage.

Detailed information on this mission can be found at the Boeing web site at www.boeing.com. Look in the commercial space area for the MS-8 Press Kit.

For the current status of this launch, call the Vandenberg Launch Update Line at 805-734-8232 ext. 61857 and the Delta II 24 Hour Launch Information Hot Line at 714-896-4770.

Wednesday Dusk Launch

A Pegasus XL missile is scheduled to be launched off of California's central coast at about 18:40 PST [1] this Wednesday (April 1st). The Pegasus will be carrying NASA's TRACE satellite.

The missile will be air launched from an L-1011 aircraft flying at 39,000 about 70 miles southwest of Monterey. The coordinates of the drop point are

36.000 degrees north and 123.000 degrees west.

Since the launch will take place about 25 minutes after sunset, the vehicle's exhaust plume should be brightly backlit by the sun when the Pegasus reaches high altitude. The impressive sight should be visible from as far away as Santa Rosa, Ridgecrest, and Los Angeles.

If you're interested in photographing this launch, I would suggest using Fujicolor 800 print film, a 50, 105, or 135mm lens, and a steady tripod. When the exhaust plume appears, take exposure readings of the plume and shoot at the indicated exposure [2].

For the current status of this launch, call the Vandenberg Launch Update Line at 805-734-8232 ext. 61857.

Notes

1. This time is approxiate. Launch can occur a few minutes either way of the planned time (note that launch can take place before the planned time).

2. You can't determine if your exposure was correct by looking at the prints; look at the negatives. Even if you under- or overexpose shot, a good photo lab technician can often compensate for it and produce a good print.

Launch Viewing Locations

I'm planning on traveling to Santa Barbara County to photograph Sunday's and Wednesday's launches. Where I'll be will be determined by the weather and my schedule. The candidate sites are as follows:

Cement Water Cistern This site is a water tank in the mountains north of Santa Barbara on East Camino Cielo. The altitude is about 2,800 feet above sea level. This site is either immersed in clouds or clear.

The directions to this location are: Take highway 154 to East Camino Cielo.

Go east (uphill) on East Camino Cielo past the Forest Service station and market. Continue going uphill for several miles. The water tank is on the left.

Refugio State Beach Experience has shown that when low clouds are present along the coast, the area between Goleta and Gaviota tends to be clear. This is apparently caused by the mountains to the north and Point Conception serving as a barrier to the low clouds which tend to flow off of the ocean from northwest to southeast.

This site is on the west shoulder of highway 101 about 1 mile south of the entrance to Refugio State Beach. To get there, do the following:

Proceed south on the 101 past the Refugio State Beach parking lot. Look for a sign that says "End Freeway". At the first call box, pull over on to the shoulder of the road.

Parking on the shoulder of the highway may be illegal. However, the shoulder of a highway is a hazardous place, so be careful.

Santa Ynez Peak This location is either shrouded in clouds or very clear. When it's clear, this 4,200 foot high site is well above the marine layer and offers a superb view.

To get there, take highway 101 to Refugio Road.

Take Refugio Road east (uphill) for several miles until you reach a T-intersection the top of the mountain ridgeline. You should see a stop sign, a sign for the La Scherpa retreat, and a road with a white sign that says "This road not maintained by Santa Barbara County..."

Take the road with the "This road not maintained..." sign and travel uphill for several miles until you reach the gated road that leads to the observatory. Park in the clearing near the gate.

Be advised that the road leading up to this site can be dangerous. Loose gravel, ice, or not paying attention to your driving could send you over the side to your death.

If you're interested in joining me to view either launch, you'll need to know where I'll be. Listen for me on the 147.000 MHz Santa Barbara repeater during my drive into the Santa Barbara area. If you don't have a VHF receiver, then refer to the table below.

Day Event Sites

Sunday Delta II Night Launch Cement Water Cistern (first choice)
Refugio State Beach (second choice)

Wednesday Pegasus XL Dusk Launch Santa Ynez Peak (first choice)
Refugio State Beach (second choice)

As I drive north on the 101 on Sunday and Wednesday, I'll look up at the mountains and see if my primary site is clear. If it is, I'll go there. If not, I'll probably go to Refugio.

Vandenberg Launch Nets

Local ham radio operators plan to hold Vandenberg Launch Nets for both Sunday night's Delta II and Wednesday evening's Pegasus XL launch. The purpose of these nets is to pass along countdown status and to discuss the launch. The nets will begin at the following times:

Net
Start
Day Event (PST)

Sunday Delta II Night Launch 21:30
Wednesday Pegasus XL Dusk Launch 18:00

The repeaters to be used are:

Freq. Offset Tone
Repeater (MHz) (KHz) (Hz)

Santa Barbara (Primary) 147.000 +600 131.8
Thousand Oaks (Secondary) 147.785 -600 127.3

For those of you who participate in these nets, please be aware that I'm very busy from about T-10 minutes to T+8 minutes and I can't respond to your calls on the radio.

You can try the Electronic Communications Privacy Act (1986) USA Federal
Law that prohibits, monitoring of cell and encrypted messages. It was made
illegal to sell scanners that would recieve those signals. The April 1994
Ammendment added cordless phones and some other radio comms to the Law.
This law made it illegal to sell scanners that could be modified to recieve
cell phone and other 'restricted" frequencies. The current Bill that just
passed in Congress will further restrict USA users (hasn't passed in the
Senate) it will make it a Felony to own a cell capable scanner.

Mr. Gates and company would love PCs to be made to there specifications. It would make the job of fixing their very complex and fairly buggy software much easier. However, as powerful as Microsoft has become, the power of consumer demand is greater.

Many hardware makers never stopped making ISA based parts because they worked, were compatible, and the customer is used to them. If people are buying ISA cards (and many corporations still are) such as specialty interfaces, there will be PCs with ISA slots. As a matter of fact, the vast majority of sound cards, including the current, brand new, top of the line ones from Creative Labs, are still ISA based.

Have no fear, ISA has got several years left in it. Compaq, HP, IBM will be the first to abandon it, but the clones will keep it alive for quite a while.

From: hurst_m@hotmail.com
Message-ID: <6fkg1t$9pp$1@nnrp1.dejanews.com>
Source record: 165311

I'm considering using some type of computer interface to automatically program channels into my Pro-26. However, I've heard that this scanner uses EEPROM chips for memory, which can only be reprogrammed a certain number of times. IF I used my computer to routinely reprogram the scanner's memory, will the memory chips really wear out?

Greetings From Florida,

I have a very nice condition grey Motorola Amplified speaker (Black Face/White Lettering) that I had a technician rewire for use with a radio that accepts a 1/8" monural plug.

It is wired to an AC block transformer.

It is designed for scanner's and radio's that need additional volume, such as the Uniden BC235xlt TrunkTracker.

Price: $50.00 FIRM plus shipping

Regards,

Joe

I know I found some BC700 mods on the web just a few months ago, but I
didn't print them because I didn't have time to open the radio. Now that
I have some spare time, I can't find *anything* on the BC700 other than
the discriminator pins in the usual listing. Anyone know where I might
find other mods?

There Are a few things I want to pick up so I am offering a few of my scanners for sale
Here they are.

USED.Bearcat BC-200 fine working condition with full 800 MHz coverage no 30khz steps.
copy of manual (I bought it used) case,charger Antenna and good battery pack included. looks pretty good. A favorite at the race track!! $175.00 USD firm

USED. Bearcat BC 2500 fine working condition full 800 MHz coverage with 30 kHz steps. This thing is FAST. Manual, case antenna and charger with a relatively new battery included. Looks ok. A good FAST radio. $225.00 USD firm

The BC2500XLT is a 400 channel, continuous band* scanner, 25 MHz to 1.3 GHz.
*Excludes UHF Television 551 MHz to 759 MHz, but includes the 800 MHz band.
V.E.O. Control, 20 Banks, Turbo Scan, Auto-Weather and Auto-Store.

USED Pro 43. You all know this radio. Mine works well. Full 800 MHz coverage with 30 kHz steps. copy of manual,antenna, no charger, no case. This one looks a bit beat up but it works great. One of the best!! $200.00 USD firm

These Prices do not include shipping. Postal money order only. I will ship when I receive your postal money order. This is the only way I do business. It works and It is fast.

Thanks for reading this

I believe what you were hearing was a telephone call made from an airplane.
That frequency is used for air to ground telephone relays. Happy monitoring,
"in God we trust all others we monitor"

Mike, N0ZTK.....................

Shiner here is the only mod i have for the 140 and i am still looking
for the one for the 64, i know i have it i just have to find it. When i
get it i will send it along.

One can convert this scanner from a 10 channel machine to 16 channels.
All one need do is rempve a diode.
>turn off the power and unplug the power source and remove whip antenna.
>Turn the scanner over and remove 4 screws.
>Carefully seperate the cabinet halves, carefully as the top and
bottom are wired together.
>locate corner of the board where the connectors for the front panel
are. See the 30 pin IC that says "Uniden". near this IC is a diode
with insulating tubing on its leads. One end of this diode is
connected to the topside of the board, and the other goes over the
edge of the board and is connected to the underside of the board.
>Clip a lead or remove this diode.
>You should have 16 channels now. Program them as you would the others.
(from 7/90 Monitoring Times, page 94)

shiner wrote:
>

Looking for a Trunk Tracker scanner. Uniden or Radio Shack - base or portable.

Will pay cash or trade from attached list...

Please advise with make/model, condition, and price.

Thanks.

John

>Ahh, yopu finally get it, NAMBLA man, loose is what you are after one of your
>nights with the little kiddies

It think it is marvelous how far you have come with such an obviously limited education. I'm sure that slinging a mop for a living at a hamburger joint has been quite challenging for you. Keep up the good work and I'm sure that you'll be promoted to order taker after the summer hires go back to junior high.

>Oh, then why did you post it in the first place, and in your own words, why
>have you been "maddogging" it ever since, all to defend your sick crap?

I never posted it in the first place but you already know that. You also know that I don't agree with your racist, homophobic views.

>you just want to think ALL men are like you,

I thank God that no men are like you: completely devoid of any wit, intelligence, creativity or imagination.

Now run along Rover and fetch your rubber bone. Arf, arf!

Congratulations, oh wise one. You and John, whom you adore so much, now lead the list of having the most cancelled news posts. Oh course, you would have to actually understand what a cancelled post really is, which is highly unlikely. Just think of it as a "good thing" like having clean water in your mop bucket at the beginning of the lunch rush.

2 Cancels for Bro Dogg <cipher@mcn.org>
1 Cancel for Bro <bro@bro.com>
1 Cancel for George Vetterle <geovet@ix.netcom.com>
1 Cancel for Salvatore Gambino <sgambino@worldnet.att.net>

>
> Steve D.
> <guitarer@iquest.net>

I just saw this article recently on-line and saved it (sorry, forget where) concerning the same problem with a 2026, which may be very similar to your unit. I haven't tried this, but this seems to make sense...

The 2026 has a fixed three-wire ribbon cable snaking out of the back of the scanner. This was meant for permanent vehicle installation (one power, one memory, and one ground wire). Because the installation was meant to be permanent, there is no memory retention built into the scanner. An easy way to add memory retention is to get a 9VDC battery snap. Attach the positive lead to the 12VDC memory lead, and attach the ground lead to the ground (black) wire. Now, attaching a battery will keep the memory for weeks while the scanner is moved about.

Let me know if you try this!

Hey Bob,
I've been an ar8k owner for about a year now. It's a good radio, but has a
few idiosyncracies.
> I have an ar8000. I can sit about 1/4 mile from a 5000 watt broadcast
> station. The signal strength meter bar is almost to the top of the
scale.
> Its on 580 KHz. However it has very low level audio.

It sounds like your radio may be overwhelmed by the powerful signal from
the
transmission tower.Try using the attenuator (Function "1"). The manual
describes
this function in better detail
>
> It also seems to be insensitive in the shortwave part of the band.
>
I'm assuming you are still using the stock antenna. It's crap, especially
down low.
An economical alternative is a telescoping ant from Radio Shack. I can't
remember
the part number, but you will experience a marked improvement on all freqs
when
using it.

I have one that I bought on closeout for $250 and put in an older :>)
Opto board and have a very capable scanner that is as good if not better
than any scanner I have seen to date(for the price)! The 2035 with an
Opto board offers the most bang for the buck. With the Opto board I do
not have to purchase a level conversion box from ICOM for my R7000. I
can use the Opto board to control both.

Possibly, but no one makes a list like that, that I know of. In my area there are for common pagers(not privately owned by and exclusively used by systems) only a few active freq's that you might want to monitor to see a particular pager used by the average joe. Possibly send a message and monitor for that message. POC32 is a nice free software for monitoring pagers and allows monitoring up to 3 diff freq's at once.

Source record: 165423
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I was searching the UHF band on my handheld scanner about 6pm yesterday, and it stopped on 459.975. I heard a woman with a very cute-sounding voice speaking. At first, I thought it might be a dispatcher of a wrecker or security service, but then I noticed that she didn't break the carrier when she finished speaking. A few seconds later, she started talking again, as if she was responding to a voice that I couldn't hear. Then I realized that I was listening to one side of some kind of phone call. I kept listening, and she said something about "waiting for her lawyers to get the deal from Warner Brothers." In the information I got from the 60 seconds I listened, I realized that she was more than likely a famous singer, she had her young child with her, and she was talking to her husband on the phone. Suddenly, the carrier ended and the scanner started searching again.

Does anyone have any ideas about what I was hearing? There are no celebrities anywhere near where I live. However, there is a major north-south highway nearby. Could this be some sort of mobile phone? Could it have been a telephone call from a airplane? Any other possibilities?

OK, well I've inherited a few scanners and with a new baby I need money more than duplicate scanners so:

I have 2 Uniden BC3000XLT's - box, manual, stock antenna, adapter, and battery all functioning, and not scratched/dropped/etc.
Asking $250 each for these.

I also have 2 Uniden Sportcat 150's (the black ones, not the yellow) in box with manual, stock antenna's, adapters, & battery packs, again, in decent non-battered shape.
Asking $100 each for these.

emails to ironstar@swbell.net

3426. Looking for a VB programmer....

Newsgroup: rec.radio.scanner

I'm looking to collaborate with a Visual Basic
programmer who knows RS-232 applications and
the Windows 95 environment.

The rewards for not too much time and investment
could be sweet....I dunno.... it's a learning and
hobby thing for me, but the door is wide open to
someone who could show me a few things.

Anyway, if you're fairly up on RS-232, Visual Basic,
Windows 95,.... AND if you have one of the following
scanners, maybe we can collaborate for some fun
and excitement:

PRO-2004 PRO-2005 PRO-2006

Contact me by private e-mail for a chat and looksee,
if interested.

> Are ISA based PC radio cards doomed in less then a year?

No more so than 8-bit serial I/O ports.

Yes, both are going down the tubes, but when you
consider that the Icom PCR-1000 and the WiNRADiO
can work slicker than greased snake snot on oiled
ice with as little as a 386DX/33 ISA computer,
then it is easy to see that these radios will be
supported long into the future.

There must be millions of 386/486/586/686 computers
around right now with ISA slots and RS-232 ports.
Nothing is going to happen to these machines other
than their price will steadily drop.

So if some guy is "stuck" with an ISA WiNRADiO or
an RS-232 Icom radio, who cares? He won't. He can
go down to the swap meet and buy himself a dedicated
486 computer for well under $100 to run either or
both of these radios in absolutely fine style.

Even if the ISA bus and the RS-232 port disappeared
overnight, existing and new owners of the Icom and
WiNRADiO would not be impacted in the slightest.

Looks like Javiation is one the last British exporters left.
The word is out that ICOM pulled Multicomm 2000's dealership.

For my information, what is Javiation's address (email, web)?

Sounds like a "phone-patch" on a business band two-way radio. You can get
a 2-way radio with a keypad that allows you to make phone calls. Pretty
common for HAMS. Our local newpaper photographers had this feature on their
hand-held radios, they would often use it to phone ahead for a photo-op.
They already had the radio system, so the add-on was cheaper than issuing
cell phones (another thing for the photogs to lug around!)

You were listening to the Air to Ground side of a duplex aircraft phone call. The base stations transmit in the 454-9** range but are scattered at various points around the country and you probably won't here anything there. Now days only Corporate aircraft still use the UHF Air to Ground phone service, most airliners have long since moved to other places.

Tom

All scanners do this!!! Scanners like any other radio can be detected
using VERY SENSITIVE recievers that can detect the RF and IF oscillators
(the same way the UK, GPO detects unlicenced TV's) Nobody in North America
is looking for scanner users (yet!) Go to any electronics store, in fact
even Radio Shack (the salesdroids will love you!!!) and they will show
you all sorts of scanners. There are even some that will follow trunked
radio systems, that more and more Police Agencies are now using....

3447. Re: HELP! - UBC220XLT or similar type

Newsgroup: rec.radio.scanner
Date: 1998-03-28 00:00:00 UTC
From: "K. Mac Donald" <kmd@fox.nstn.ca>
Message-ID: <01bd59e0$81b26360$e17e35c6@home>
Source record: 165618
Cross-posted to: alt.ham-radio.marketplace,alt.radio.scanner.uk,rec.radio.scanner

I own a UBC220XLT and have been having problems with the charging system.

I have replaced the battery pack and the adapter (damaged cord), however the
operating time after a 24 hour recharge is only approx. 60 minutes.
Does this time seem reasonable?

Since I no of no technique to determine the percentage of full charge
on the AA battery set I can never know for sure if the batteries have
taken a full charge.

I have also discovered the female connection for the DC power supply on
the left side of the radio is somewhat loose and perhaps not providing
an adequate or an intermittent electrical connection.

I have disassembled the radio to determine if the connection could be
repaired. The connector is soldered to a main circuit board and
appears to require further disassembly than I am comfortable with
to investigate further.

I believe the newer design of this radio (200XLT?) uses a base mount
which incorporates the electrical connection for the battery charging,
thus eliminating the side connector.
This design change may indicate the side connector may have been
a poor design choice and had been causing problems.

Would appreciate hearing form anyone on the possible testing of
or repairing of the connector on these radios.

Thanks,

K. Mac Donald

>Why don't Mackey and Cheek go to alt.mackey and fight it out.

Why? Maybe because they both have to air opinions in a public forum to feel like they are having any kind of impact. Or because each of them is a demagogue. They thrive on mayhem and fighting and causing chaos.
They're a matched pair, my friend, and as such, they will ever be in a stalemate, because they are the same person, essentially, using the same cheap shots and illogical weapons of faulty intellect.
Now, back to scanners and fun!
Peace,
Mike in MO.

Keep in mind that if you are using a Discone, it is NOT DC Grounded!! You will need to put a Blitz Bug in the coax cable for that antenna to be legally grounded. Same thing with a wire dipole antenna which is also not DC Grounded. If you hear a clicking sound coming from your radio when its lightening or even windy outside, its an electrical charge sparking inside your radio looking for a ground and its finding one. Thus the "clicking sound". ->Dan

Try a CPU initialization. Press and hold Clear and 0 and turn on the power.

3452. Pro-51 (jack addition) need help

Newsgroup: rec.radio.scanner
Date: 1998-03-28 00:00:00 UTC
From: pathana@is3.nyu.edu
Message-ID: <6fhotv$t8t$1@news.nyu.edu>
Source record: 165623

I am making an Hamcom type interface. (thats not a problem)
I Must also add an headphone jact to my radio-- that is the problem
My sanner is Pro-51; according to BILL Cheeks' file:
NFM Chip Type CKT symbol RF in Pin Scan. Pin Audio
MC 33613D IC-1 16 13 9

Now how to recognize it on Pro-51? that is the question?

Does this looks like a small black bug with 16 legs? or some
other looking. Pl. help . thank u.

You need to have an interface like Hamcomm. You can make one;
under $20. all parts are avail at Radio S. However; hard part is
You ALSO need to make a small modification/additon of a jack into
your radio/receiver. Than only u will enjoy. Good luck!

There are no "rights" associated with the Usenet.
If you can get access, then you can post. It
doesn't matter if the consensus is 100:1, the
"1" is every bit the equal of the 100.

> I guess that's why you couldn't identify with the
> people who lost their mailing list,

Guess all you want and be wrong. I can empathize
and identify with them. That's why I know they
lost it their own selves. Frank had nothing to
do with it.

> but can identify with "good ol' Frank"...

Yes, I can empathize and identify with him, too.
He discovered that he needn't be victimized by a
ruthless, imbecilic majority who didn't know the
difference between an anarchy and a democracy, and
who went on to act like they didn't know. That's
why they lost their mail list. Pure, utter stupidity
was the only reason.

> you're a half-assed excuse for a person.

Well, thank you for your carefully considered
and pontificated opinion. But you really need to
go whisper that in the ear of someone who gives
a flying green booger about what you think. Me,
I don't give a hoot......know what I mean?

> Gee, what intellect. What charm.
> What a waste of flesh.
> Mike in MO.

Whatever trips your trigger, pal. Your carefully
considered opinions are running out of your pants
leg, though. You should probably go get your
mommy to give you a wiping and maybe even a shower.

At the very least, go find someone who admires you
and your opinions. The needle on my Give-A-Shit Meter
is flat against the zero peg where you are concerned.

Know what I mean, Ignats?

You should consult with my Scanner Modification FAQ
that I recently posted to this newsgroup. It gives
the broader picture, especially for the BC-140. A
lot of things can be done to it, but no one has
written them up.....and no one ever will, more than
likely.

As for the PRO-64, I wrote a number of things about
it in the monthly WORLD SCANNER REPORT, and will
continue to do articles on it, since it's a popular
and high class scanner.

As for a PRO-64 Web site, try these two for starters:

http://www.access.digex.net/~kplotkin/scanner.htm

http://hruska.home.mindspring.com/pro-prog.html

Bill Cheek reviewed the PRO-64 in his "World Scanner Report" and he
might have back issues available. His web site is at:

http://ourworld.compuserve.com/homepages/bcheek/

There is also information there on available scanner mods but there is
no cellular mod for the PRO-64.

Rich Wells also reviewed the PRO-64 and the review was on his web site
which I don't have the URL for handy.

Ken's Radio Scanner Page has all you need to know about the PRO-64.
Check it out at:

Just make sure that the scanner can receive the aviation bands because not all can. I have a scanner that has the aviation bands "missing" from the range of frequencies it can receive.

Personally, I use my Kenwood TM-742 as a scanner when I'm airplane watching. Also comes in handy on my way in for a couple of hours flying because I can check out the ATIS.

Cheers!

-> I NEED TO KNOW IF YOU CAN REBOOT THIS SCANNER . IT SEEMS TO HAVE LOST ITS
-> FACTORY PROGRAMING. IT WILL SCANN THE PRIVATE FREQUENCES THAT I PROGRAM BUT
-> IT WILL NOT STOP AT ANY OF THE PRE PROGRAMED CHANNELS IE NATIONAL WEATHER
-> SERVICE . IT IS NOT THE SQUELCH . THANKS TO ANY ONE WHO CAN HELP
I don't know if this will work or not, but try manually entering the
freq. for the weather service, like here in KY the freq. I use is
162.550Mhz., if your not sure what the one close to you uses try to get
a manual that has all the diffrent freqs. in it, or find someone that
has a scanner that displays the freq. on the face when it stops at it.
I have a Bear Tracker (BCT 7) that does this. Hope this helps.

Nice try Bro or should I call you Dogg? I don't think Netscape v.
4.04 allows posting cancels for posts other than your own unless
you *intentionally* change your identity information to match that
of the post. Pretty hard to do that *accidentally* while trying to
erase them from your drive. Are you sure you're not using a patched
version of Netscape that's had the code edited to allow general post
cancelling? Netscape Communications might be *real* interested in
something like that. Hehehehe. Maybe they'll give you a job as a
programmer.

An easy answer is to put a dropping resistor in series next time you
replace the bulb. 100 ohm or so.
This helps the life by limiting the inrush.

Hi,
I'm thinking about buying the MVT-9000 from Bandercom but they don't supply an AC power adapter for use here in the U.S. Anyone know where i can order one from? Thanks for any suggestions!!!!!!!

P.S. Does Yupiteru have an internet address?

Well John, don't you truthfully think that Bill could say the same?

Again, and I use Dejanews as my source, with semi-verifiable posters,
it seems that his support is larger and stronger than yours.

>Blake, are you going to Dayton this year?

Nope. I will be going to the International Wireless Communcations
Expo in Las Vegas, (IWCE) the National Emergency Number Association
Conference, (NENA) and a couple of APCO conferences. No time
for Dayton. Business takes priority, and between the local customers,
and the consultant customers, I simply don't have time for Dayton.

Maybe someday.

3479. FS: PRO-2006 & other good stuff

Newsgroup: rec.radio.scanner
Date: 1998-03-29 00:00:00 UTC
From: zxzx777@aol.com
Message-ID: <1998032923575301.SAA16352@ladder01.news.aol.com>
Source record: 165202

For Sale:

1: PRO-2006 scanner with the HB-232 interface installed for computer control. Strong display light, not weak like some others. The HB-232 is installed in a nice removable enclosure. $400.

2: Standard CCR-708. This is the one with the built-in spectrum display. Covers 50-905 MHz with NO GAPS. Includes box, manual, and service manual. VERY good condition in & out. Asking $450.

3: Two VADER boards for those that use the HB/CB-232 interface. These are great boards that permit you to record audio from the PRO-2005/6 with the HB-232 interface, automatically tag it with time, date, frequency, etc, saves it as an audio file, and plays it back when you please. Fits in a regular PC case with a full slot. Includes all the software, etc. These were $300+ each when new. $100 each.

All prices do not include shipping. No trades please. The reason I'm selling is because I have too much stuff now. :)

3480. recommend scanner for aircaft freqs?

Yupi would have to adjust an entire line to not pick up certain ranges (cell) and that would be a waste because not as many people would consider it so marvelous.

Geez.....I ain't seen Bill posting around here for weeks. He made a point of telling you this was the end. He stuck to it.

Yet, your obsessive compulsive disorder requires you to pound away at your keyboard about the Cheek. Regardless of what you perceive as past injustices; don't you see the warped way you carry on?

Bill's not answering you. Perhaps you should get more candles for your Cheek shrine in your closet. Spend a few more nights chanting and double your nightly output of anti-cheek text. Maybe that'll do the trick. Perhaps you ought to put signs in your window proclaiming your hatred of the Cheek. Write it real big. Don't worry about spelling or grammar, just write the way you usually do.

Of course you could signal Cheek directly, but it requires you to blow out a tune on the barrel of a loaded shotgun. You ought to practice. (Hint: A deer slug gives the best musical tone.....Try it!) Don't put the safety on, it flattens the note.

Blow John! Blow!

here is the website for the
GORP- Florida National Wildlife & Marine Sanctuaries:

http://www.gorp.com/gorp/resource/us_nwr/fl.htm

I have a book that has list of nationwide wildlife tracking Freq's
30.0500 MHz
30.0600
30.0700, &
30.1700 - 30.2500 MHz 10 KHz increments

164.4375 - 164.7125 MHz 12.5 Khz increments

It's just a guess, hope it helps.

Shawn Crane

Very very well. It's generally better than most.

> How well does it work on shortwave utilities (LSB/USB)?

Very well again. Again it's generally better than
most (handhelds).

> Thanks, Frank

Bill Cheek is one of my mentors. His comments have standing
in my opinion. However, as a contraband Yupi owner I feel
my comments have standing as well. Here are my opinions:

The MVT-7100 is a FINE Multi-Band receiver.

In my opinion it's RF performance BEATS the AOR-8000.

It's reliability is LEGENDARY (in my opinion).

Perhaps the fact that I'm the RF tech for two scanner houses
in my area will lend enough credibility to withstand the
inevitable attacks that Bill Cheek will lay upon me for the
apparent sacrilege that I've commited.

To Bill Cheek: You still the man!

73 to all.

What you are referring to was NOT the FCC Questions Pools as
you originally stated. It was a priviate individuals notes
on what the questions were.

There is a slight, but MAJOR difference!

> My point. And then, a few years AFTER that, the nocode license
> became available.
>
> My original post stated this fact, and you have been argueing ever
> since. Is your point only to argue, or are you truly confused?

I understand that this all happened before you were a ham Blake &
that is likely why your data is in error.

First: The Bash Books came out in the early to middle 1980's.

Second: Middle to late 1980's the FCC question Pools were made
public & the VEC groups started taking over testing from the FCC.

Third: The Test element 3 was broken up to 3A & 3B, resulting in the
theory test for technician shrinking to HALF it's original size!

Fourth and LAST: Your above point, the No-code tech license became
available.

Blake, are you going to Dayton this year?

Hardly, he posted TODAY trying to cause trouble! Bill is still posting,
he is just going under a fake identity AGAIN! He is using a identity
of "nemesis@parg.org". For your proof, I have copied one of the
path statement of his posting, go look at it yourself
to verify authenticity. Notice the end of the path is "cts.com"
and the "X-CTS-Authuser: bcheek" (found at the botton). Again,
if you don't believe me, then turn on full headers on your
reader program & pull up the message for yourself.

The management team of PARG.ORG is intending to take action
against Mr. Cheek since he is NOT authorized to identify himself
as a part of PARG.ORG!

Does anyone have a list of scanner frequencies in the Athens, Georgia
area or know of how I might obtain such a listing on the internet??
Please send info directly to my email address.
Thanks a bunch!

You could adapt a Pro-43 scanner to work with either a PROgramit or
CE-232 interfaces. Either one of them requires the same number of
internal connections to the keypad matrix. The PROgramit interface
would be cheaper to build. The internal connections on a Pro-43 is not
the easiest to make. The tends to be a lack of space on this unit.

This can also be commercial planes also. You will usually find the
other half of the conversation 5MHz away. 454.9 and 459.9MHz tends to
be a common one that I hear traffic on. I haven't taken the time to
track it down, but usually you might hear a pilot telling a
wife/girlfriend/etc. about what his flight schedule is going to be
like.

Disclaimer: I don't know anything about the specific chips in your scanner.
However, early EEPROM chips were limited in the number of reprogramming
cycles they could support without errors. For the early devices, this was
usually in the 5000 to 10000 cycle range. Modern parts have greatly improved
this, with > 100000 cycles being commonplace. If you want to know the design
expectation for your specific part, you'll need to look it up in the vendor's
databook.

5MHz splits, so the ground transmits in the 454MHz area.

Moose,

EDCO specializes in commercial and government sales and service. Their retail/hobby branch, EEB, went out of business at the end of 1997. I called recently about some repair work and I was told there would be a three to four month turnaround time. Unfortunately, they're the only AOR repair shop I know of.

Modern EEPROM has limits far beyond what you're
ever likely to push.....like 10,000 writes or so.
Maybe even more.......

Older NVRAM was kind of limited, but you're not
likely to ever run into it in scanners. Modems
typically used NVRAM.

Freqs from 148 to 149.8 are US Govt, assigned locally. Most likely you heard Coast Guard or Air Force Operations. You could determine which by a closer look at your location. If you are near a large body of water it is likely that you heard a CG unit. If you are not then it is probably an Air Force unit.

Hi All,

I'm looking for a product called RadioRest or Radio Rest or something similar...

It's was a nice (very nice) holder/support for hand held 2mtr gear, portable scanners, etc. I saw them at a swap meet, didn't buy it at the time, and now I can't find them anywhere - the story of my life :)))

I believe it's called RadioRest. Can anyone help me out?

I just a new hand held trunk tracker and want to show it off in style :)

Thanks for any assistance.

Bill

Yupiteru radios are not certified for import
or sale in the USA, so if you were to snag one,
you would, in effect, have to smuggle it in.

"Everyone else is doing it", so there is an air
of complacency about it. Apparently US Customs
doesn't know or doesn't care about the FCC's
certification requirements for receivers right
now. So it would "seem" that you are "safe".

Things like that used to seem safe on the CB Radio
scene, too. Then one day, WHAMMO! Customs and
the FCC got together and consulted, with the result
that the party was over for the complacent ones.
Painfully and unpleasantly, I might add.....

Factor in that scenario and the law, along with
the obvious fact that Yupiteru doesn't care enough
about the US Market to get their wares certified
for sale here. Service and technical support will
be non-existent or expensive.

Then, consider how your hard earned money will
find its way over to some European dinner plate
and retirement fund...and otherwise enhance a
foreign market while the radio scene here in the
USA continues to languish and stagnate.

Points to ponder, even as you look at the Yupi
technical specifications and performance reports.

The broader picture merits your scrutiny, too; not
just a few gratifying facets.

>How does it perform against other scanners on VHF/UHF?
>
>How well does it work on shortwave utilities (LSB/USB)?

It's a terrific scanner, esp. for the money (about $300). It is easily one of the most sensitive that I have owned and with a replacement antenna, like the Radio Shack whip ($10) you won't find anything significantly better in handheld. I like it better than the AOR8000 that I once owned, although it lacks computer programmability, which I think is very useful.

I did not find the SW listening to be particularly remarkable, even with a long wire, however. That seems true for any handheld that attempts to be an all-purpose radio. If you want to listen to SW more than occasionally, I recommend getting a SW radio.

It's one of the easiest scanners that I have tried to program--that's a big consideration with any 1000 channel job, I think.

That's Grove's antenna... so try www.grove.net. It's about four feet long (it mounts vertically). I believe that RS recently started selling something similar but I don't have any first experience with it. The Scantenna is a very good value--I have mine in the attic and I could not be more pleased with its performance (and I've tried a couple of others, including a discone and some home-made jobs).

3524. FreeTracker 2.0 released (BC895 TrunkTracker Software)

Newsgroup: rec.radio.scanner
Date: 1998-03-29 00:00:00 UTC
From: no.spam@for.me
Message-ID: <9A717810DBDC1070.09E1018FA0968FBC.3B150E8BF8206B75@library-proxy.airnews.net>
Source record: 165274
Cross-posted to: rec.radio.scanner,alt.radio.scanner

http://www.AutoWinNet.com/freetrack.html

* Supports up to 25,000 "Virtual Channels" which are like the radio's normal channels, but add Callsign, Description, Color (for activity log), Alarm, location, hit count, and more. VChannels can be scanned for activity, or stored into your BC895

* Descriptions - You can store Descriptions, Callsigns, and Locations for frequencies and Trunk Talkgroups/ID's. When that freq/talkgroup appears, a description is shown, along with Callsign, City/State, etc

* Alarms - A Wav file can be assigned (or speaker beep) to certain freq/talkgroups, a Bitmap, a custom Script or a .RTF file that pops up while that freq/group is active. For example, have all local police codes shown when a certain police channel comes alive. I just added some Cool bitmaps that appear with local police and fire stations

* Colorful charts and graphs show you what frequencies/talkgroups are most active

* Powerful script language lets you create your own scripts, then run them at any time.

* PerCon database lookups from their web page (stored as html) can be imported. Also imports from Grove, Probe, and PerCon Dbf files!

* Drag and Drop channel editing - throw any database entry to a channel, or vice versa. If that frequency is already assigned, it zooms to the channel # to avoid a duplication

* Activity Report is color coded - you can assign any color to any specific freq/talkgroup, plus bolded text

* Search Ranges - you can store up to 2,000 search ranges, then double-click them to activate an immediate search of that frequency range

* All BC895 keys are supported, allowing a virtual radio on your desktop

* FreeTracker can be minimized as a TrayIcon, with a feature-rich right-click menu for easy access to popular functions

* Database-editing in a simple grid. Click the record you want, and change any value. Menu allows selecting any record to zoom to that frequency.

* Communicate with your radio interactively - type any command in, and see the response.

* Power users can utilize the quick-command box. Simply key in a command word to change frequencies, channels, scan, hold, search, manual, etc.

Example Syntax:
f15189 tunes radio into frequency 151.890
c56 takes scanner to channel 56
Up arrow emulates SCAN key
Down arrow = Manual
Right arrow = Search
Left arrow = Hold
... plus about 50 more powerful commands

* Export all scanner channels/freqs to a text file or Dbase, then import back into the scanner at a later date.

* Complete logging to a file, or printing

* Export your VChannel/talkgroup database to a HTML file for posting on your favorite web page.

* Multiple copies can be run for multiple BC895 scanners

3525. Antique Radios & Test Equipment 4 Sale CHEAP!

Newsgroup: rec.radio.scanner
Date: 1998-03-29 00:00:00 UTC
From: Dean <deanntx@e-tex.com>
Message-ID: <351E9B4E.43434084@e-tex.com>
Source record: 165275

Hello everyone!

I have just got through adding a lot more antique radios to the site. All of them have pictures now, so there is no mestique as to what they look like. I have also added a few Test Equipment items as well. Remember, these radios are offered as is with no warranty or guarantee if they work or not. Some are missing knobs, cases, power cords, microphones or whatever. I have priced these radios and such very VERY CHEAP!
These radios are for the collectors out there that want to rebuild, restore or just to tinker with some of the older equipment, and as you will see, they are priced to sell.
We have already sold quite a lot of these old radios to a lot of you out there, so make sure you check the list out again, for it has some interesting stuff on it as well.
I want to also add that there is a new REGISTERED room on the IRC that you can chat with other people with the same interests as you, RADIOS! I

know a lot of the hams out there do not like to associate with CB'ers and vice versa, but hey, we all started with that junky old CB that is long gone now.
The name of the room is #CB_Radio, and it is located on the Undernet group of servers.
It is up 7 days a week, 24 hours a day, 365 days a year now. If you are just lurking, or want to buy, sell, trade, swap, wish for or whatever your need be, this Chat Room will be a good place to start. Don't let the name of the room fool you, for it is for everyone that has an interest in some kind of radio communication.
Again, the name of the room is "#CB_Radio", and is located on the Undernet group of servers. If you need software to access the IRC, you can get the latest copy of "mIRC" on our website.
If you would like to take a look at some of the Antique Radios that we have, click or go to the URL below.

http://www.e-tex.com/cbcity

Thanks for taking the time to read this entire message. I hope that I did not offend many of you. I am not out to try and make a killing with all this, in fact I am probably taking a loss, for I am sure these radios cost us a lot more than what we are selling them for.

The BC200xlt is not capable of deleting the frequency back to zero like most scanners. So what you have to do is either enter a frequency that you hardly use (i.e. 30.000 & lock out that channel) or Lock out the frequency you don't want. The other alturnative is to reprogram the scanner, but that is a little time consuming for just one channel :)

With the scanner in the OFF position, hold down the MANUAL key, the #9
key, and the #2 key, and turn the scanner on while holding down these
buttons. This will errase all programed frequencies and search limits
from the scanner.

Scanners do have IF, and RF stages, TV's don't. But seeing how you edited
my article, I thought I would attempt to clarify...

> ... He fell out of the Stupid tree and hit every branch on the way down.

EXCUSE ME! I am not an electronics technician, so I may have incorrectly
labeled the internal parts of A SCANNER. But the simple fact is TV recievers
can be detected, up here in Canada the police have radar-detector detectors
(they can find people using radar detectors!) My point was a scanner can
be detected using similar methods that th UK GPO uses to find unlicenced TV
sets... Even your PC puts out RF signals! I can pick up my scanner with my
old Hallicrafters reciever. When I tune down to the IF freq of my scanner
I get a beat signal on the SW reciever...

> > IF I used my computer to routinely reprogram the scanner's memory, will the
> > memory chips really wear out?

It depends on the microcontroller (or EEPROM chip) they use.

For example, the 16C84 microcontroller has EEPROM for both
program storage and data storage.

The data storage is rated a minimum of 1 million cycles, typically
10 million.

The program storage, however, is rated a minimum of 100 cycles,
typically 1,000.

What's the difference? The physical construction of the memory
cell. Simply stated, there is a layer of "insulation" that
gets "broken down" as an EEPROM cell gets reprogrammed. When this
layer ceases to insulate properly, the cell will not retain it's state.

I'd expect that your particular EEPROM can be trusted for more than
1 million cycles or so...the scanner will be quite old by then. If
you can post a part number, I might be able to post the exact specs.

If you are really concerned, you should do the math...assume a 20
year lifetime of the scanner, and calculate how many times you
will reprogram each location over the years. Keep this number under
100,000 and you will probably never have a failure. Or, if you
program at a higher rate, calculate the number of years before you
sell the used scanner (in "mint" condition, of course :>).

You're not out of line on the price. $150 to $175 for a nice 2022 is about average. Radio Shack's closeout price is really not valid here since these older scanners are cell capable which gives them considerable value compared to today's scanner offerings.

Date: 1998-03-29 00:00:00 UTC
From: wb5sxk@aol.com
Message-ID: <1998032900205301.TAA27784@ladder03.news.aol.com>
Source record: 165326

I've been playing around with a Radio Shack PRO-90 Trunk Tracker. As you know, the "Tracker" stores its Type II talkgroups as a decimal number. If I were asked to give you
a list of talkgroups on our system, I'd give you something like this:

800003 --- Water and Gas Department
800005 --- City Wide Common
800045 --- Madison Parish Mutual Aid
801027 --- Police Primary
as this is the notation that is used by the Motorola SmartZone Controller.

The Trunktracker, however, stores and these same talkgroups as:

48 --- Water and Gas Department
80 --- City Wide Common
720 -- Madison Parish Mutual Aid
16432 -- Police Primary

Now...if you can come up with talkgroup listing locally, how do you convert it from the 6 digit format to something the tracker can use?

First delete the 8 and all the zeros up to the first non-zero character, in other words, subtract 800000 from the value

800003 becomes 3
800005 becomes 5
800045 becomes 45
801027 becomes 1027

Now Convert each of the new values to HEX.

Now we have 0x3, 0x5, 0x2d, and 0x403.

Multiple each value by 0x10 (add a zero at the end).

Now you have:
0x30, 0x50, 0x2d0, and 0x4030.

Convert back to decimal and we have:
48, 80, 720, and 16432..Values the Tracker can use.

> You need a license to operate a TV in the uk?

Yes. Unlike the US tradition where the airwaves are [were] public property, in the UK they are not and you need a license.

This (among others) is one of the reasons some people are opposed to listening restrictions and equipment frequency range restrictions in the US. If not vigorously opposed, US citizens will only be allowed to listen to narrow ranges of frequencies permitted by the government, and the users of other bands will have the illusion of privacy (not real privacy).

>It all boils down to, If you don't like it, don't read it.

Once again, here is the " I can post whatever the hell I want, and screw the rest of you" attitude shown by so many people in these groups

>I'm sure even your POS aol newsreader has a next key

And again, here is the usual response from such people to those who would disagree with the aforementioned attitude... an insult for no reason (and to my newsreader, too! Gee, that sure hurts me.....NOT!) and they've run out of any real arguments.
Sure, I can hit the next message, and usually I do. But if, as you and Bill and so many others say, I can read/post whatever the hell I want, than you have to take it just as much as I.
You didn't have to read my posts either.
Smile, God loves you.
Mike in MO.

3552. Anyone have current freq's for Portland Oregon "Feds"

Yo NAMBLA boy,

REMEMBER, you sent HOW many e-mails defending that crap? And now you want to disclaiam ALL of it!

Yeah, If I did what you did, I'd be backpeddling like you are too.

For a guy who claims such intelligence, you sure make a weak attempt at an insult.

And to assume homophobic and racist views, shows all you can do in life is GUESS!

Being offended by your love of little boys has NOTHING to do with homophobia. For all you know I could be GAY! IDIOT

Go ahead, call me a FAG (not that I am, but you can do so IF it makes you feel good) I'm plenty secure enough to take it.

As for racism, sorry, I'm black.

Black is beautiful, so is white, red, green (you, with envy, that a guy could master the english language) Oh go ahead and throw a few typos out, I'll tro a few in for you, there.

But don't forget, the e-mail you received from me went WAY over your head, boy lover.

L8rDayz, kiddie lover

These guys would be a riot if they wern't so sad.

Make a case out of a spelling error ('cuz that's the BEST case they can make!)
and look what they use to SUPPORT IT!

As one poster 'round here would say,

hehehehehehehe!!!

Thanks for the YUKS, always good to end the day with a laugh!

BTW, isn't this getting old?, Me thinks so.

I'm scarce, letting the loserboys have the last word, you KNOW they can't
resist.

Till next time......

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Air to Ground Telephone [22.521]

Ch Ground Airborne

Signaling 454.675 (459.675)
6 454.700 459.700
7 454.725 459.725
5 454.750 459.750
8 454.775 459.775
4 454.800 459.800
9 454.825 459.825
3 454.850 459.850
10 454.875 459.875
2 454.900 459.900
11 454.925 459.925
1 454.950 459.950
12 454.975 459.975

Transmissions are FM. Ground stations repeat the airborne
half of the conversation, and transmit a continuous tone when
idle. From one to four channels are assigned in a particular
area.
Service is used on private aircraft.

In this case it's hard to tell, because the reputable companies with known track-records will sell ONLY the politically correct blocked units.

Try calling the person, or oufit directly ... that ALWAYS works. If they're no where to be found, simply forget it. You don't want to do business with a guy who can't afford a phone, or a company who doesn't have one...do you?

Can the Radio Shack CTCSS board used in their 2045 scanner be installed in a Uniden BC9000xlt? The pinouts in the 9000 for this accy look the same as that in the 2045. Thanks.

Andy

So far I have identified the following unit/station IDs for the Border
Patrol in San Diego:

Charlie # = Campo, Echo #= El Cajon, Foxtrot = Helicopter, Sierra #= San
Clemente, Tango #= Temecula.

Can anyone confirm or add to the above ????

[snip]

FWIW, the Radio Shack PRO-64, which is currently being closed out in the
$150 price range, lets you select AM or FM in any band and defaults to AM
in the 108 - 136.975 MHz band, where aircraft are usually AM. It covers a
little of the military band, 380 MHz and up, but that's probably not
enough to be useful.

That was the one really nice thing about the Icom R-1. Although it
really does not have banks so to speak. You could expand the number of
channels it scanned from 1-99 (or 0-100 or however it worked) If you
wanted to scan from say channel 36-59 all you had to do was set it.
It would be nice if you could do something like that on all scanners.

> These are NOT legitimate addresses & I stated so at the
> time. It was necessary to use them for the Netscape reader
> because I DID NOT have an internet e-mail address at the
> time.

By your own admission, Toilet Boy, these are illegitimate
addresses. Of course, you had to lie to the Netscape software
to make it work. That's how I proved you faked the addresses
with my original posting (spoofing your identity) to show just
how easy it is to spoof an address. That is how you've been
doing it for a while now.

You, again by your own admission, did not have a valid e-mail
address. That is another way of saying you did not have a valid
account either. Since you did not have a valid e-mail address
OR a valid account, you had illegal access. You stole services
which you were not legitimately entitled to. As I stated before,
you are guilty of theft of services, a criminal act.

> > > jomackey@hotmail.com
> This WAS a legitimate address for me at one time.

Plausible, I'll let it pass.

> > > mackey@idiots.org
> I never used this address, it was a forge.

Plausible, even though it does describe you *very* well.
That still leaves fifteen illegitimate addresses.

> > > You claim that you were in a work situation where
> > > you had T1 access, but no real Internet access.
> Correct!

In other words, you had to steal access to gain entry.

> WRONG! My job was to test internet systems & digital
> communications. It was my JOB to "gain entry"!

I say you are a liar. Your admission of lack of a valid
account is the basis of my accusation as listed above.
Your continued evasion of the direct questions regarding
who you supposedly worked for is tacit admission of
guilt.

> ehehehe,

More brain stuttering. I told you to watch your doses
of Prozac, Toilet Boy.

> you're just JEALOUS!

You flatter yourself, Toilet Boy (you have such a small
mind). As such a lowlife miscreant, you're not even worthy
of pity, let alone jealousy.

> > > Using your real name and call sign is only a diversion
> > > to deflect attention from your criminal activity. It's
> > > your little way of making it *look* like you're
> > > legitimate.
> It is legit, there was no criminal activity.

Stealing telecommunications access to a system which you
have NO legal means of access is, indeed, a criminal
activity.

> > > The only thing you've offered to back up your claim
> > > that you had legitimate access, is your word.
> Then report me to the authorities & let them investigate!

What a moron and a dimwit you are, Toilet Boy. Can you be so
stupid, so oblivious not to see that you are already under
investigation? Yes, I believe you are *that* stupid.

> OK, when an investigator contacts me I will give them all
> that info!

It won't be an investigator, it will be the arresting officer.
You're going to be *very* popular in the cell blocks. Your
reputation as a bathroom queen will precede you, and you can

look forward to having a very full dance card.

Either way, you're still a liar, fraud, and a thief.

A dipole looks something like this;

```
1/4 wave length 1/4 wave length
--------------- ---------------
| |
| | <=== Feedline
| |
```

The impedance at the center for a dipole is 75+/- ohms so if you build
one use RG-59 or RG-6 coax.

You got me. Could be that it won't meet the
FCC spec's, but that isn't likely because
European specs are tighter than ours in most
cases.

More than likely, Yupiteru just doesn't see
the US market as all that lucrative....and
it would cost them a bundle to set up shop here.

That's probably 90% of it anyway.

Looking for an old el-cheapo 10 to 20 channel scanner for a friend. Only requirements, it has to be a handheld, battery operated model, it has to be a keypad programmable one, none of that crystal stuff, and most importantly, it has to work.

It dosen't have to do 800mhz or AM aircraft, just 30 - 512mhz NBFM with gaps will be fine. Although, no one would complain if it did. :)

All reasonable offers will be concidered, but I'm only looking for one.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

Source record: 165227

Steve,

All but the very cheapest scanners these days have VHF civilian airband coverage, and pretty much any of them will do for on-site monitoring. I wouldn't make my decision on which scanner to buy based only on its airband coverage. Do you need to track a Motorola 800MHz trunked system? If so, then buy a Uniden 235XLT "TrunkTracker." Do you want 1000 memory channels? Then get the AOR AR-8000. Pick out a scanner that has the other features you want, then make certain that it has airband coverage also. Almost all of them do.

Now, if you want to listen to military aircraft, the picture changes. Only the top-of-the-line scanners cover the UHF military airband from 225.000 to 400.000MHz. Plus, generally only the more expensive scanners allow you to select AM mode in the 138.000 to 144.000MHz range.

This is just a quick answer. If you have other questions feel free to email me.

F/S Ramsey 800 MHZ Down converter with deluxe case.
Assembled from a kit.Untested!! I never made up the proper cables to check for proper reception.It bench tested ok as per the instructions! Requires cables and power supply to complete.Lost interest in the project,purchased scanner with full
800 MHZ.
$50.00 plus shipping
To all who replied, the buyer i had backed out so it is still for sale. I lost your e mail addresses so if your still interested email me again and let me know you had contacted me before.Sorry about this.

E-mail me with all inquires
Robert

Bro Dogg <cipher@mcn.org> wrote:

> Yupi would have to adjust an entire line to not pick up certain ranges
> (cell) and that would be a waste because not as many people would consider
> it so marvelous.

Nahhhh, I don't think that is the case. "Certain ranges"
are firmware matters, not hardware. Firmware and
software being much the same thing, except firmware
is cheaper, means there's a one-time cost to add in
a bit of code.... and in this case, it could be done
overnight.

Literally.

Yupi just isn't excited about the US market; else
they'd be here. Could be that they know Unidense
would kick their butts from here to next Tuesday
if they came in. Unidense doesn't like competition
at all. In fact, Unidense barely tolerates AOR and
lets them be here solely by virtue that AOR had
a "deal" with Regency way back before Unidense bought
Regency's scanner division.

Lest you wonder why Unidense tolerates GRE-Japan, that's
because Radio Schloque would kick their arses from here
to Thursday if Unidense didn't like it. Radio Schloque's
scanner business is a lot bigger than Unidense's, see.
And Radio Schloque probably peddles as many Unidense-made
scanners as Unidense does on its own.

So Undense will sit back and "like" GRE and AOR, but
any new guys coming around will have to "pay".

It's been like that for the last dozen years or so.
Unidense bought out Regency and Electra Bearcat way back
when.....and acquired more or less a monopoly by virtue
of dozens of scanner patents and existing markets.

So Yupiteru probably sees itself as having to compete
with AOR and Trident, neither of which are doing much

more than holding their own....if that.

Bascially Radio Schloque "owns" the USA scanner market,
but "lets" Unidense play in the corner of the sandbox that
the neighborhood cats use. Radio Schloque gets to be
the "good guys" and Unidense gets to be the "muscle".
Between those two, nobody else gets much of a chance
to play, and certainly no new guys.

This is good for the two big boys on the market,
but it sucks for us end-users.

> inevitable attacks that Bill Cheek will lay upon me for the
> apparent sacrilege that I've commited.

No sacrilege at all. I don't give a hoot on any
personal level at all. Tech specs aside, there are
a number of factors to weigh into the decision of
whether to buy a Yupi or a Poopy or whatever.....

My primary "con" is the lack of a technical support
foundation of the Yupi. I have yet to see a service
manual or even know anyone who has one. So all those
tech specs may be wonderful......but as it stands,
you better not crack the case of that hummer hoping
to make anything better or add anything new. You
booger it up and you lose. I just prefer some sort
of a technical support foundation for the products
I buy (and support).

Now down the list a ways in second place is my
dislike of fattening some Europie's retirement
fund. I don't mind spending bucks overseas so
long as it brings some benefit back to my turf.
But if Yupi doesn't see fit to set up an office
here, why should I fatten their Keough Plans?

In third place is the law. The matter is simple. If it's against the law and you flout it, the tax man is going to wake up and come around to collect. Anyone who buys a Yupi has got to be prepared to be the FIRST victim of US Customs' power to confiscate and stomp contraband. And the Yupi is most assuredly.....contraband. It is not legal to import with singular exception if you travel abroad and bring one back in for your own personal use - THAT *might* be legal.

But mail-ordering them is downright smuggling and clearly against the law. That means the more people hoot and holler and whoop it up, the sooner Johnny Law is going to wake up and do something about it.

Now my #1 - #3 "cons" are just me. I don't expect or even particularly hope others will buy in. But what I do kind of hope is that my expressed opinions find their way over to the Yupiteru Headshed and piss them off just enough to waltz in here and set up shop. Hey, if their scanners are all that hot, then I'd like to see them come in and frap Unidense, Radio Schloque, and AOR up side the chops and make 'em pay attention and take some notes.

Unidense and Radio Schloque haven't been doing us any favors of recent years, but they got the market all locked up so's the new kids who might do us some favors can't get in.

So anyway.....there's the facts as I see 'em. If you don't mind having little or no tech support for that Yupi and if you don't mind sending your hard earned cash geetas to some Europie's dinner plate, and if you don't mind Yupi not giving us the time of day.....then your decision is your business and none of mine.

Now if you tried to suggest that the Yupi could pick up SETI signals and translate Outer Slobovian into Pig Latin and had a computer interface on its battery terminals, then I might step up to check your credentials and inquire which shrink you use.

Bottom line is this: if Yupi is all that hot of a scanner to where people want it, then they deserve to know ALL the facts, and not just one or two. Furthermore, a good needling of it just might goad the Yupi Headshed into coming over here and setting up shop......which would shickle the tit out of all of us, right?

Hi all,

Is there anyone out there who can help me with the following problem:

The WACARS 05 program does not work very good in combination with my soundcard, and as a matter of fact, I already needed my soundcard for another purpose; the Recall soundrecorder...

So what I would like to have done is to attach the WACARS-software to the HAMCOM-modem or the LOWE-acars interface....

Must be a rather easy job for a technician wich I am certainly NOT!!

All suggestions very welcome,

Thanx in adv,

Hi Bill,

They're made out of oak, have felt backing, elastic holders built in,
etc., etc., etc.,...right? Handmade?

If so, I know exactly what you're looking for - I've got 4 of them right
here on my desk! Yep, they're called "RadioRest"'s, and the guy who
makes them is in the midwest somewhere (I think his name was John - I
met him when I bought my RadioRests at the Kansas City hamfest last
year).

I'll look around (I'm in Kansas City) and see if I can come up with an
address, phone number or something, and let you know - he had stickers
on the RadioRests I bought, but I took them off :(

See ya,

Bob

Hey Bill,

If the support you're talking about is made out of oak, has felt
backing, and other little goodies, then I know which one you're talking
about...and yep, it's called radiorest.

I've got four of them sitting here on my desk holding my trunk tracker,
and 2 meter radios. Nice supports, and handmade too - not the cheap,
stamped out of plastic junk.

I'll look around and see if I can come up with the guys address or phone
number or something (I think his name was John). I met him at the
kansas City hamfest when I bought my radiorests. He had a sticker on
the units with his name, address, etc..., but I took it off :(

Will let you know.

Bob

3614. ICOM R10 Discone Antenna

Newsgroup: rec.radio.scanner
Date: 1998-03-30 00:00:00 UTC
From: TimSven@AOL.com
Message-ID: <6fo9ipcif1@nnrp1.dejanews.com>
Source record: 165246

A Few Antenna Questions: I have purchased an ICOM R10 and a Diamond discone antenna after read so notes on the internet. I keep hearing that hooking-up external antennas overloads the handheld receivers, but the discone doesn't provide gain I thought. Will this antenna need some attenuator between the lead-in and receiver or not? Any recommendations? I will have 50' of coax leading from the antenna which will be mounted 10' above my roof line (total height 3'8-40'). Also, I keep hearing that the coax type is important. With only 50' of coax and considering I don't want to overload a handheld, why shouldn't I just use R58/U coax? I won't be transmitting on this antenna, so would a different coax like RG8 really make any difference? If I run a heavy gauge copper wire from the outer coax, where it enters the house, to my exterior electrical ground rod, will this work sufficently. I am assuming that the discone metal staft will need a seperate grounding (lighting) wire run to a seperate ground point. Tim TimSven@AOL.com

Gee, it must be bad when someone does not possess the english skills
to write his own ad, and have to resort to stealing someone else's ad
to sell his own radio. (For those interested in buying one - I am
selling the AOR-3000A below that Mr. Owodunni has stolen the words to)
Segun, it must be tough not be able to express yourself.

Pick up a book and read it. A mind is a terrible thing to waste. You
must really try to express yourself without the use of profanity in
personal e-mail messages to others. Remember, any idiot can use
profanity. Have a good day!

I will be visiting Des Moines this coming weekend. I was wondering if anyone knew any police/fire/emergency frequencies to monitor or a link to find some. Thanks.

Come to think of it, this newsgroup is really nice, it could be better, if we ban the troublemakers and rude posters amongst us.

I'm just waiting for such a day, when we can bring control to this medium, and get rid of the bad apples.

Does anyone know how I can buy/build an microphone addition to my scanner setup? I have a uniden bc200xlt and two noise reduction headsets from racing radios that weus for race scanning. i'd like to add some kind of voice actuated
microphones that would allow us to talk to each other over (or interrupt) the racebroadcast and, when finished, switch back to the scanner broadcast. I'm SOOO
tired of either screaming or the shoulder-tap/earphone lift method of talking, but they want $400 for the proper setup. With detailed plans, i could build it if anyone can help!! thanks in advance

PS Please respond by emailing to my box, THX AGAIN!!!!!

Who is this John Mackey guy? Is he a participant in some
new form of group therapy in which psychiatritic patients are
given Internet access? I sure hope he's not running loose
cause he sounds dangerous to me! Has he stalked anybody
besides Bill Cheek?

Jed

ALL of these scanners are cellular modified and recieve the
REAL cell band (869.975mhz - 869.000mhz)and are in excellent condition.
BC700A- has a xxxC date code -- $175.00
Pro-51- date code 12A3 -- $175.00
Pro-26 - has European CPU installed so the firmware version
is now 728EH EUr 0.11 - $400.00
European CPU for either Pro-2035 or the 2042 that opens up
the entire 800mhz band and also upgrades a 2035 to a 2042 -- $100.00
NO price whiners please (you know who you are !)

>
>If it's a BNC connector, try either radio shack or a computer store (used for
>networking connections) for a tee connector

Try your local (or not so local) HAM radio store. Keep in mind the units they sell will have a high freq port, low freq port, and combined input/output. These will work to EITHER combine two antennas to one radio, OR you may turn it around and use a wide band antenna with two radios.

Check it out, you'll usually pay $30 to $50

154.950 (F-1) -Drug Enforcement Mobile-to Mobile
155.445R/ (F-2) -Drug Enforcement Dispatch
155.490 (F-3) -Drug Enforcement Regional (CLEAN)
156.090 (F-4) -Drug Enforcement Special Operations
460.200/465.200 179.9 Department of Justice North Repeaters (F1)
460.475/465.475 179.9 Department of Justice South Repeaters (F2)

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.425 PEMA Rain Gauges
169.500 PEMA Rain Gauges
169.525 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges
171.125 PEMA Rain Gauges
171.875 PEMA Rain Gauges
412.625 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

Hallo,

Nu, dit voorstel doe ik al vanaf versie 03 aan Mike,
maar hij gaat niet overstag.
Misschien als hij massaal, en van iedereen email ontvangt met dit
verzoek
,dat hij wel gaat ?

Het prog werkt via modem 200%,nu dus niet, en tevens komt het prog beter
tot zijn recht.

email adres auteur,

Mike@mcmail.com

Hi Brian,

Several of us were star partying at Fremont Pead and saw the launch.

I was watching the rocket through my binoculars and was noticed as
the first stage rockets fell away every few seconds they would burn
briefly almost at the same time. This while the second stage was
well away.

Why this periodic burning of the first stage rockets well after
they had separated from the second stage?

Thanks,
Rich

I completely agree. But I fear this ain't the best some of the guys around here can give. Maybe they'll never reach the ground. Anyway, just ignore them.

Good thing I know that average Americans ain't like these guys. Other people from abrooad might do so....

Mike

3637. Any BC235XLT Modifications?

Newsgroup: rec.radio.scanner
Date: 1998-03-30 00:00:00 UTC
From: Raymond Hudson <email.raymond@worldnet.att.net>
Message-ID: <6fp59o$51a@bgtnsc03.worldnet.att.net>
Source record: 165368

I read that most newer scanners (after 1995) cannot be modified for cellular fequencies. Does that apply to the BC235XLT?

If not, are there any other modifications possible?

3638. FS: Regency Scanners

Newsgroup: rec.radio.scanner
Date: 1998-03-30 00:00:00 UTC
From: Joe B <joeb@succeed.net>
Message-ID: <01bd5c20$8e39bf60$0c35abce@default>
Source record: 165369

FOR SALE:

Regency MX 3000 $75.00ea. 5 available

Regency MX 100 $50.00ea. 21 available

Regency TS-2 Turbo Scan $100.00ea. 15 available

Regency MX 7000 $100.00ea. 6 available

These units are sold "as is'' at this price. If you would like to have it bench tested before shipment add $25.00 to the price. These units were in working order when recently removed from law enforcement vehicles. They are in good to excellent condition. For ordering information please use our web site order form. Visa & Mastercard accepted.

3639. PRO 2026 Mod sought!

Newsgroup: rec.radio.scanner
Date: 1998-03-30 00:00:00 UTC
From: dcs4.NOSPAM@psu.edu
Message-ID: <dcs4.NOSPAM-ya023580003003981752460001@news.psu.edu>
Source record: 165370

I recently adopted a used PRO 2026 100-channel mobile programmable scanner.
I really like this little guy, nice features but very compact.

One drawback I've noted is the very short memory back-up for programmed
channels. The unit was intended to be mounted in a vechile and the memory
would have had constant power. I'm using it in the house with an adapter,
but if it loses power to the memory back-up system for longer than a few
minutes (if I leave it unplugged overnight or move it from home to the
office, etc.), it forgets everything that was programmed.

Is there a known modification to extend the memory life? Could I replace
the "stock" capacitor/battery with a better one? Other ideas?

Thanks!

- Dave

Source record: 165372

My nephew dropped his Radio Shack PRO-41 Scanner. He broke what appears to be a small choke (coil?) with F106 stamped on it. This is located on the logic PCB near the Nicad Case. The local Radio Shack gave him a parts list, but no PCB layout.

Now the scanner receives below 150MHZ, but not above 150MHz. The squelch does not work.

Anyone have any ideas? Thanks.

Now that is very lucky listening to a celebrity or something. I would think it was Mariah Carrey but I am not sure she has a deal with Warner Brothers.

Another answer is to get in touch with your local classic car spares
company. MGs (60s and 70s vintage) Used 14v bulbs in their dashboard
switches. These are small screw in ones about 3/8ths long and 1/8th
diam and are still available.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1997 - RELM MS-200 mobile
Apr 1997 - RCA RP-6150 portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong,

causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring

Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by

reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature

identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove- | ent.com for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual

band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner

with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes

on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked

systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an

optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan-nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough

condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each,
but you must know the patent number. Credit card orders are
taken over the telephone by the Assistant Commissioner for
Patents at (703)305-4350. Alternatively, you can mail a
check or money order, made payable to "The Assistant
Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark
Office, call their automated information message system
toll-free at (800)786-9199.

There are various patent servers on the world wide web,
including IBM's server:

http://patent.womplex.ibm.com

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is | http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC * license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated February 15, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

APRIL 1998

April 5 (Sun): Madison, WI. Madison Area Repeater Association. Info: Jeremy Charles, N9VHT, PO Box 8890, Madison, WI 53708-8890. tel. 608-245-8890. http://www.cs.wisc.edu/~jeremyc/mara/swapfest/

April 19 (Sun) : Stickney, IL. Dupage Amateur Radio Club, Hawthone Race Course. Hours 8 AM - 2 PM. Setup 6 AM. Info Ed Weinstein, WD9AYR. 7511 Walnut Ave, Woodridge Ill 60517 (630) 985-9256 or check the DARC homepage at: http://homepage.interaccess.com/~geirh/ Talk in 145.250. VE testing at 9 AM. Hourly door prizes. All indoor space reserved with a special table pricing offer that ends March 1st. Tickets: $4 in advance, $5 at the gate. Tailgating, weather permitting. Outdoor flea market spaces free.

MAY 1998

May 2 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 3 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $6. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: N9ZNA@AOL.COM. see http://tbcnet.com/~jleonard/hamfest.htm (Nice mid-sized hamfest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facilities - AJ9S).

May 15 - 17 (Fri - Sun), Dayton, OH - Dayton HamVention

JUNE 1998

Jun 7 (Sun), Princeton, IL - Starved Rock RC. info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341. tel. 815-795-2201 (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 14 (Sun), Wheaton, IL - Six Meter Club of Chicago. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

last changed December 17, 1997

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1997 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

So this is what it is like at alt.fan.john.mackey eh?

Is King Mackey really a liar. Could his new email address be sjohnm@bellsouth.net now?

Do you know if his best friend is Gumby Damnit?

Tell us more please. Feel free to email me.

Always listen to the inter-agency frequency(155.370). Often times the NYSP chopper is utilized to do something for a department that doesn't have an air unit and the inter-agency (or county net as we called it when before I retired). And of course as the other fellow pointed out, the normal NYSP frequencies for whatever troop area you are listening into.

From: gdfthr768@aol.com
Message-ID: <1998033023401400.SAA02453@ladder03.news.aol.com>
Source record: 165386

Alright here's for the children in the room-
First I am no Bible thumper. Second, why in hell should I go to a "moderated" room when I have a every right to be here and opine as I see fit?Isn't that your point?
Again, as I make a statement, people reply with insults and nastiness. I am not Christian, so what is your "alt.abortion.". etc, point, Jack?
My reply about "democracy" was in response to Cheek's OWN usage of the same word in his post.
>the minions of the moral majority
>censoring our posts and telling us which airwaves we can monitor?

Moral Majority? What the hell are you writing about? Did I ever say a word about "which freq's we can monitor"? You don't even stop to read the post before you respond.
Not a Moral Majority, but maybe a few people with actual decency and class, which are all too lacking in many groups.
Think what you will, be dead wrong. Hell, just be dead.
> narrow views of society and freedom.

Again, what the hell are you saying? It's a narrow view to expect grown-ups to act like grown-ups, to expect "professionals" to act professional? Mr. Cheek may have the "right " to do anything he wants, anywhere anytime, but does it always make it the right thing to do?
For all the crying about "staying on-topic", what does that even mean anymore? Going by your arguments, there ARE no topics except whatever anyone wishes, as it everyone's right!
>You are so typical of a fundy bible thumper.
Again, I have NO idea why this is mentioned. If you knew half of the struggles I've had trying to stop those REAL bible-thumpers from censoring books at school libraries in my city, and voting campaigns, etc., you would see that I am not what you think. I NEVER asked to censor a damn thing. I'm merely wondering what a guy like Cheek (and a few others I guess) are up to when they are shooting off at the mouth, insulting and otherwise disrupting what goes on in here.
Yes, we have the right to anything. But if we treat rights as privledges then perhaps those rights will last a little longer.
Mike

>hook two antennas up to a single receiver. Does anyone know where to
>purchase one or an alternative way to hook up a shortwave and a discone
>antenna to one receiver? Thanks.

P.S.

Futher to my previous note, make sure you get a combiner where the two inputs are in the same phase (0 degrees). You do not want a 180 degree combiner, otherwise the signals from the two antennas will tend to cancel each other (not a good thing!)

Just stay away from Mackey. He is nothing but a troublemaking
loser that deludes himself into believing he has some intelligence.
The guy obviously has no life outside of the internet judging by the
number of times he posts and e-mails people.

3660. Re: New AOR8000 unblocked $405

Newsgroup: rec.radio.scanner

Message-ID: <1998033023571601.SAA05393@ladder03.news.aol.com>
Source record: 165391

All,

A friend of mine who lives just around the corner from me has ordered several AR-8000s from Bandercom and they have arrived on time without any problems for $435.00 each, including shipping. (He sells them at hamfests for $550.00 and so far has sold every one very quickly.)

I'm not sure that Multicomm is including shipping in their $405.00 price. If they are then it's a really great buy.

John

For Sale
Radio Shack Pro 24 handheld scanner

This unit has:
* 16 channels
* WX button
* 2 digit display (REVIEW function will identify each
channels frequency, one digit at a time).
* 800 Mhz reception (same ranges as other RS models....806-823, 851-868,
896-956)

This unit does NOT have:
* a SEARCH function, which makes it less fun. It only scans
the 16 preset freqs. you enter.

* Cell mod ability.....but it does appear to get images

Make me an offer.
I will cover shipping (via US Priority Mail).

Thanks.

What you heard was the first airborne telephone system, designed by Wulfsberg systems formerly of Overland Park KS and recently of Prescott, AZ. Now it is owned by Allied Signal Corp. of Olathe Ks. It operates on several channels in the 454.xxx/459.xxx frequency band. The radio is called a Flite Phone. First introduced in the 1970's it is still popular due to its simplicity and ruggedness. I should know I worked as an Eng. for them for years and I have a complete set of airborne radios and an old ground station they make excellent ham 440 repeaters since they include a 10 watt pa (that can be retuned for 20 watts) a built in duplexer and controller board. Somer commercial jets and most private jets still have them installed and running after more than 20 years of service.

> also.

OK!

Well lets see:

Richard Kendrick & Bill Cheek have canceled my messages!

Bill Cheek sent me a post card - I have attached it to the
end of this message.

Other people have forged my identity to post on this NG.

Richard Kendrick & Bill Cheek have made up stories about me
& posted them here.

Bill Cheek made up lies about me & told them to my
sysop when I was on Fidonet. Then Bill kicked me
off his fidonet echo (like an internet newsgroup).

Eric Oyen & Tim Tyler have complained to my organization www.parg.org)
about me. I can send you the e-mails they sent if you like.

Bill Cheek broke un-written rules of net manners & printed
my home phone number on this NG. (No big deal though, I am
listed in the phone book! - so it's public info!!!!)

Bill Cheek complained to a ham radio club which I am a
member about me, sending several e-mails to the club
president.

Several people claimed to have gotten me kicked off of USA.NET,
but that has never happened!

Do you want to know anything else?

3668. Re: I-Phone Question

Newsgroup: rec.radio.scanner

For nearly all of them you need to go & get a program called
"Rprtlink". I don't have the web address at my finger tips right
now, but just do a search at http://www.yahoo.com for it. You
can down load it for free.

Once "rptrlink" is running, ir will take you to the ham radio
rooms of I-Phone.

I use rptrlink frequently, if I can be of more help feel free to
e-mail me!

Source record: 165056

I recently bought a 2045 and the CTCSS board. When I received the board to install it had Uniden stenciled on it. I don't know it it is identical but it is made by Uniden.

Check out your local hobby or model railroad shop. 14 and or 16 volt
grain of wheat and grain of rice (smaller) bulbs are standard.

I have about a 5 yr old PRO-37 portable Radio Shack scanner.
And, I need to make some minor mechanical repairs to it.

The front (number, etc) keypad has taken so much use that the
keys no longer actuate --unless you press down REAL hard on them.
Can I take this apart and clean it or somehow replace the key
contacts? Any suggestions will certainly be appreciated? Thanks!

No, infact in the Bash Books he states that they are CLOSE, but not
exact & that they have MOST, but not ALL the questions!

> John, John, John. I keep trying to politely guide you, and show
> you just how misinformed you are, yet you keep getting your
> theories messed up.

Blake, are you saying you were a licensed Amateur Radio Operator
with the FCC in the late 1970's & early 1980's? Otherwise,
YOU are mis-informed, or trying to tell a complete LIE.

> Late seventies. It was 1980 when the FCC pursued Dick.

Perhaps, but his books were available & in CURRENT print
until 1984 or 1985.

> Strike 1.

No strike here, the Bash Books were available thru the
mid-1980's, well past the 1980 date YOU gave. Instead,
it is a strike for YOU.

> >Second: Middle to late 1980's the FCC question Pools were made
> > public & the VEC groups started taking over testing from the FCC.
> >
> In 1982, Congress agreed to the FCC divesting themselfs of HAM
> testing.
> Strike 2.

No strike here, you are wrong Blake! (or else your wording
is mis-leading) For the facts to support my statement above
please read on.

They did agree in 1982, but it took a few more years to
actually happen!!! :)

In late 1982 the Goldwater-Wirth Bill (PL 97-259)was passed by
congress & signed into layw by Ronald Reagan. This permitted
the FCC to accept accept the voluntary and uncompensated services
of licensed radio amateurs to serve in preparing and admistering
examinations. In 1984 the FCC began certifying organizations
to coordinate the efforts of examinations. The FCC did this by
granting "Volunteer Examinator Coordinators" in all 13 regions of the

FCC. I don't know about other cities, but the Portland, Oregon
office of the FCC was still giving amateur radio tests until
early 1986!

> >Third: The Test element 3 was broken up to 3A & 3B, resulting in the
> > theory test for technician shrinking to HALF it's original size!
> >
> >Fourth and LAST: Your above point, the No-code tech license became
> > available.

> The Technician theory test, which with no code became the
> entry level test, was still tougher than the ENTRY level test from
> before No-Code, which was Novice.

Then that is up to opinion & certainly not a agreed upon fact.
MANY still believe that the Novice license is the most
difficult because it requires Morse Code.

Blake, I suggest you research your facts. The best source is the
"VOLUNTEER EXAMINER MANUAL" produced by the ARRL-VEC. The cost
is $10.00 last time I checked. (If you qualify as a VE, you
can get one for free)

Message-ID: <3520ABDD.C0ACB30F@nightowl.net>
Source record: 165101

Here's your mod Scott

PRO-34 Scanner Modification

1. To restore missing 800 MHz frequencies, remove D-11.

2. To add 66 to 88 MHz (European Coverage), install a diode at
D-9.

3. D-10 must remain in place for full 800 MHz coverage.

4. If a diode is added at D-13 it cuts out aero band, also seems
to affect 800 MHz channel spacing.

5. D-12 added dosen't seem to have any affect.

6. Only D-10 and D-11 are factory installed.

Hoei,

Tja, ik geloof dat Mike misschien wel een niet goed werkend programma heeft ontwikkeld, dwz niet goed werkend op ALLE geluidskaarten en computers.

Het lijkt mij dus een prachtige oplossing het HAMCOM modem er voor te gebruiken, maar ik krijg al een maand of drie geen antwoord meer op m`n mailtje en ik ben hierin dus niet alleen.
Mike heeft mij in zijn laatste mailtje wel toegezegd het te overwegen om het HAMCOM modem te gaan gebruiken, het zou volgens hem niet zo`n moeilijke ingreep zijn.

Helaas ben ik zelf niet zo`n techneut, dus afhankelijk van anderen, maar wel een zeer enthousiast radio/scanner-luisteraar. Kijk maar eens op m`n homepage.

Alvast bedankt voor je antwoord, en hopend op betere tijden,

It sounds JUST like NMT Cellular system we use in norway & scandinavia,
There are two NMT (nordic mobile telephone) systems, One is NMT 450 and
the other is NMT 900 , NONE of 'em are encrypted , and may send some data
packets before and after the voice transmission ,
NMT 450 uses freq 454 ..... to .... 467Mhz ..... in 50 Khz chanel steps.
NMT 900 uses something like 935 .. 945 Mhz

We also use GSM like rest of the world , but the 450 Mhz have longer range
you see (GSM + mountains = no good) :)

Depending on the call / and the phones , u may hear both of the parts when
one of them use NMT phone.

Where do u live ? , outside scandinavia ?

3687. Open letter to Mike Roberts, the author of WACARS

THIS IS A LETTER I WROTE TO MIKE ROBERTS, THE AUTHOR OF WACARS:

Hi Mike,

As I asked you before, here I beg you once again:

PLEASE MAKE A WACARS-VERSION HANDLING A MODEM INSTEAD OF THE SOUNDCARD!!!!!

Many guys here in Holland are having sincere difficulties in running WACARS, mainly because there is a big varity in different soundcards....

Al I get on screen is some "raw data" and that`s it!! Even I pulled all my hair out for anger.... I still think WACARS is the most beautiful ACARS-decoder in all aspects, it only should run a bit more easy, and in which we think a modem is the solution..

If I can be of any help to you, please let me know...(sorry for bad English)

Greetings from:

Hallo Eric,

Prachtig initiatief,
Zoals ik jou al eerder mailde,
heb ik dit bij Mike al vanaf versie 03 onder de aandacht gebracht.
Tot op heden resultaat 0,0.

Het is inderdaad zonde van dit mooie prog.
Persoonlijk de beste acars decoder voor de hobbyist.

Ik heb hier 4 PC's van 486Dx2 tot Pentium 133,
met geluidkaarten vanaf compat. soundblaster 16 tot een AWE 32 en 64,
maar op geen van alle krijg ik ook maar iets te lezen behalve de RAW
data.
En zelfs daarin mis ik bijna 25% van alle uitgezonden data.

Ik hoop dat het jou lukt !

LET op;
Voor modificatie via discriminator !
moet er wel een AM IF/MF IC in de scanner zitten !
Anders is/blijft het resultaat nogsteeds slecht.

Ik denk namens andere,
Bedankt voor jou inspanningen

wie volgt.....

1000 Mhz & UP!

Have Camnis HSC-050 and pre-amp seams pretty deaf on
1500 - 1700 Mhz. Have used 18inch dish and 40 turn helix
in attempt to receive NOAA, GMS, GEOS, INMARSAT
etc,,, with no luck...

Is the receiver that deaf, have used similar ants on
2.4 Ghz downlink on 0-13, worked well.

Interested to hear of any reports on using this radio
at these freq's.

I am aware that this rig can be subject to poor QA and
have heard of the cpu playing up which can be healped by
reseting the cpu.

Cheers John Kavanagh

Congratulations, you finally stayed up all night with a dictionary and
wrote an entire message without one word of profanity.

Its ironic that you mention the word "greed." I am only selling one
AOR-3000a. Yet, you indicated to me in a graphic personal e-mail
message that your ad was more of a priority since YOU HAVE EIGHT OF
THESE RADIOS TO SELL. NOW, I WONDER HOW SOMEONE ACQUIRES EIGHT OF
THESE RADIOS. PERHAPS ALL EIGHT OF YOUR RADIOS ARE STOLEN.

Well, its now evident you may have finally learned an important lesson
of "minding your own business;" something which your folks should have
taught you at an early age. Mr. Owodunni, if you had done that
initially, you would not have had to endure such a painful lesson in
front of an audience.

However, there are other lessons that you have obviously missed; the
one of INTEGRITY AND HONESTY. Unfortunately, neither I, or the kind
folks on this newsgroup can instill in you. These are personal traits
that you must develop on your own.

I would like to thank all of the kind folks on this newgroup whose had
the unfavorable ocassion to review Mr. Owodunni's incoherent attempts
at the use of the english language, and his love for profanity.
Finally, I would also like to thank those folks who have conveyed
their personal disgust directly to Mr. Owodunni. Take care folks!!!!!

My City's Police Traffic Units use the Motorola trucked Radio system.
However, aside from the usual 800mhz trucked system.
They use their old freq. (before changing to trucked), which are in the
450-459mhz range.
Does anyone know will the Radio Shack Truck Tracker be able to track this
kind of Motorola 450mhz trucked system?

Ed,

Nope, the Trunk Tracker scanners only follow Motorola trunked systems
in the 800 mhz range.

Joe

THis is VERY GOOD ADVICE!

If people would stop causing problems & focus on being more positive,
thing would be greatly improved!

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==========

There is a growing interest in tapping the baseband audio
out of various scanners for decoding of a variety of esoteric
signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be taken from TAPE REC jacks,
headphone jacks, and EXT SPEAKER jacks because of the voice-band
filtering that is done between the signal source and these
output jacks.

Therefore, it is necessary to tap the "baseband audio" directly
at the output of the discriminator chip for your scanner. Table 1
shows a list of scanners, the discriminator chip(s) used in the
scanner, circuit symbols of those chips, and three pins of general
interest on the chips: RF-Input, Scan Control, and, of course,
the baseband audio (discriminator output) pin.

Even though your scanner may not be listed below, try to find
its discriminator chip, and chances are it will be listed with
one or more scanners below, the pins of which will be the same
for your unlisted scanner! Corrections and additions to this
list are requested. See my mail and other addresses at the end
of this file.

For hookup information, see just after Table 1.

HOOKUP PROCEDURE
================

If you need the raw Discriminator baseband audio signal for external purposes, the best way to access it is via a jack installed in a convenient, unobtrusive location on the scanner.

1. Install an RCA or other jack in a desired place on the scanner's external case, typically the rear panel.

2. Connect the shell or outer frame part of the jack to scanner chassis ground.

3. Connect the (+) leg of a 2.2-uF to 4.7-uF tantalum capacitor to the Discriminator output Pin. (Capacitor should be tantalum, but can vary in value from 1.0-uF to 10-uF at a voltage rating of 25-50vdc.)

4. Connect the center conductor of a shielded coax (RG-174, etc) or shielded mic cable to the (-) leg of the capacitor.

5. Connect the shield of the cable at this end to a nearby PCB ground trace or spot.

6. Connect the center conductor of the other end of this cable to the center or hot lug of the jack.

7. Connect the shield of the cable at that end to the ground lug of the jack.

8. Fabricate or buy a shielded patch cable with one end to mate with the new jack on the rear of the scanner at that end....and the other end to mate with whatever jack is on the tape recorder, processor, decoder, or whatever device is to be connected at the other end.

"SCAN CONTROL" AND SQUELCH PIN DATA FOR
UNIDEN SCANNERS and Realistics made by Uniden
==

Uniden does their darndest to make it difficult to hack their scanners. You guys have some work to do. Here's the deal: Even though all NFM discriminator chips have a SCAN CONTROL pin, Uniden doesn't always use it! Some Uniden scanners have a separate Squelch circuit with the SCAN CONTROL pin on the discriminator unused! You have to find the real Squelch circuit, and then determine the Logic for that circuit. It's easy, but differs from one scanner to the next, and I can't cover them all. I need your help.

See Table 2 below for a good reference. By and large, those with scanners of Uniden origin have to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will
find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip
is used. (Follow its trace out on the PCB)

A. If so, then determine the logic order. If
the SCAN CONTROL pin is used, then we can
use it!

B. If the SCAN CONTROL pin is not used,
then locate the real Squelch circuit.
The schematic and block diagrams in
the service manual will be helpful.
Uniden uses chips like NJM2902,
NJM2904 & NJM3403 to generate Squelch
logic. Use your voltmeter to find a
spot where the Squelch logic is 0v and
5 or 8v, depending on the setting of
the Squelch control. Table 2 shows
details for those Uniden-made scanners
with which I am familiar.

TABLE 2
UNIDEN SQUELCH CHIPS
Updated 3/31/98

It was not my intention to "flame bait" Mackey, I have an interest in abnormal psychology and have been doing some research on its manifestation on the Internet. I have been monitoring a number of Usenet news groups and find this one nearly ideal for my project. Normally I work in the background as an observer but my excitement upon discovering this Mackey individual prompted me to post. He may very well be the perfect case study!

If I were to engage in such behavior, e.g. "flame baiting", it would be for purely scientific reasons to measure the target's response for statistical compilation. Sorry if I have caused any disturbance, I shall try to be as inconspicuous as possible during my stay here.

AOR AR-8000DX with continous coverage and DX mod by Javiation. The modification is carried out by installing a custom-built PCB into a standard AR8000. This will allow switching between the standard AM/NFM filter (approx. 12kHz bandwidth) and the narrower SSB filter (approx. 4kHz bandwidth); for more details see Javiation's Web page at www.javiation.co.uk

The unit is new in box and includes all the factory accessories as supplied by Javiation.

$ 600 includes UPS shipping. Contact johnl@ptd.net Thanks.

John

Source record: 165129

The current generation of TT's can ONLY follow 800 MHz Motorolla type 1 and 2 systems. They can not follow 900 MHz, 400-500MHZ, GE, Johnson, Kenwood or any digital trunked systems. It is possible to follow GE systems with a computer interface and a program on the internet.

Uniden says the next generation will be able to follow some of the above systems, but the next generation is AT LEAST two years away.

Anyone have experience using both for low band (30-50Mhz) reception on hand-held scanners? The Radio Shack model has the "center loaded" section but the Grove is longer when fully extended to 46". Which works better?

I'm planning to build a scanner antenna using a 4:1 balun. Would one designed for television use work, or do these units have higher losses? The reason I'm asking is that I'm aware many parts designed for the average consumer/ TV user are often poorly made since many people don't know much about electronics.

True, the Air Force does assign e-mail addresses.

However, any e-mail you send to those addresses is NOT
considered private & others MAY read it at any time.

> tell me the Air Force has no e-mail addresses? Where do you obtain your
> information from, John?

According to the Weekly newspaper at McChord Air Base about a month
ago, they suggest using USA.NET or hotmail for private e-mail.

> I've been lurking in

> to make it work.

WRONG!

I was not LYING, it was a software work around to make the software function as it would NOT otherwise! At the time I stated, as I always have since, that they were NOT legit addresses. Just like you forged my address the other day & stated it was a forge. If I am guilty, they YOU are guilty of the same crime!

> That's how I proved you faked the addresses
> with my original posting (spoofing your identity) to show just
> how easy it is to spoof an address.

YOUR own admission of faking MY address/identity.

Of course, imitation is the BEST form of flattery!

> You, again by your own admission, did not have a valid e-mail
> address.

Correct, is ANYONE arguing this? NO, they are not!

> That is another way of saying you did not have a valid
> account either.

I never claimed to have an internet account, just internet access. *IF* I ever used the term account (during that PARTICULAR time in question) then I mis-spoke & should have used the term "access" rather than "account".

For example, Libraries & internet cafes have internet access available for their customers/guests. They do NOT provide an e-mail address either.

> Since you did not have a valid e-mail address
> OR a valid account, you had illegal access. You stole services
> which you were not legitimately entitled to.

You are wrong, see my above response.

> > > > You claim that you were in a work situation where
> > > > you had T1 access, but no real Internet access.
> > Correct!

>
> In other words, you had to steal access to gain entry.

Wrong, it was my job to access the internet & test digital
communications, under contract, for a well known company.

Or as I tried to tell you below but you were to busy looking
for a arguement to understand:
> > WRONG! My job was to test internet systems & digital
> > communications. It was my JOB to "gain entry"!

> I say you are a liar.

Since your word means NOTHING, that is no big deal.

> Your continued evasion of the direct questions regarding
> who you supposedly worked for is tacit admission of
> guilt.

No just that I do NOT have to give personal data to someone like
YOU. If an investigator were to contact me, THEN I would be required
by law to do so & would offer NO hinderance. YOU are not trustworthy
for such privledged info.

> Can you be so
> stupid, so oblivious not to see that you are already under
> investigation? Yes, I believe you are *that* stupid.

Then let me say this AGAIN:
> > OK, when an investigator contacts me I will give them all
> > that info!

> It won't be an investigator, it will be the arresting officer.

Whatever you want to think in your little demented world is fine!
In the USA you are investigated BEFORE arrested. Otherwise is
FALSE ARREST!

Are you dense? Or just stupid?

My "insistence" about Yupiteru scanners is NOW.
It is a current issue in a current era.

The Moonraker 6 and eight gallons was a long time
ago......years and years betwixt then and now.

Live and learn, Kibitzer. Don't YOU? Or are
you the same "perfect" being now as fifteen
years ago?

Or....were you even in existence fifteen years ago?
Sometimes, you make me wonder if you fell off the
turnip truck yesterday......such the sanctimonious,
pompous, self-righteous messiah that you portray.

I am, however, utterly delighted and gratified that
you find me so deserving of your asinine, obsessive
attentions. I really MUST count in your books somewhere.

Pity.

You don't count for shit in mine. But that's all
too often the irony of Life and Living, isn't it, Glenn?
I mean, you can't find a wave and a star of your own
to ride, so you go gunning for others who do.

You are deceived, sonny. Your gun shoots blanks.
And your obsession with me only serves to confirm
that I somehow rank way up there in your books.

You dumbass.......... heh heh heh

Analog cellular phones will be LONG gone in 10 years... heck, they will
probably be overtaken by digital phones within the next couple of years.
Then the ability to get the 800mhz analog cellphone freqs won't be the money
draw that it is now.

Hi,
Can anyone please tell me how to connect the Astra 1200s to another SCSI card such as Adaptec 2940U or UW? I manage to install both of them together, but do i install the VistaScan and state that it is a ASPI compliant SCSI card? or I need to use MagicScan? Is there any differences in scanning speed?

I have tried using MagicScan but after the picture has been scanned, it will give me GPF faults. So please help me and please tell me how to connect them together and how to install those damn softwares and drivers.

Boey

Wow great idea. I'd like to see global settings being able to turn off
or on all delay/pri and lockout settings. or atleast per bank.

>that is likely why your data is in error.
>
John, John, John. I keep trying to politely guide you, and show
you just how misinformed you are, yet you keep getting your
theories messed up. I understand that it takes quite a bit for
you to understand that you do not know near as much as
you think you do concerning HAM and radio.

>First: The Bash Books came out in the early to middle 1980's.
>
Late seventies. It was 1980 when the FCC pursued Dick.

Strike 1.

>Second: Middle to late 1980's the FCC question Pools were made
> public & the VEC groups started taking over testing from the FCC.
>
In 1982, Congress agreed to the FCC divesting themselfs of HAM
testing.

Strike 2.

>Third: The Test element 3 was broken up to 3A & 3B, resulting in the
> theory test for technician shrinking to HALF it's original size!

>
>Fourth and LAST: Your above point, the No-code tech license became
> available.
>

The Technician theory test, which with no code became the
entry level test, was still tougher than the ENTRY level test from
before No-Code, which was Novice.

My point, and your third strike, which means, your out.

Source record: 165186

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

You have a good point, But I would have never cought the
2006 ce-232 scanner bug if I had not browsed across some-
thing stuck out in a faraway site advertizing your primary
product. It took me a year of droolin and searchin, readin
FS adds, searchin for info on it, just made me want it more and more
But hay I found a 2006 in sacramento and Next I boght the Ultimate
Scanner and rigged a old 2" analoge volt meter in to a mean extrnal
s-meter.
I have a friend that has bought a few CE-232 kits from you
and he I just had to pick up the motorola chip and some of the rare
chips , That way I could get him to install 6400 mem chip
and a key board inter face. THE ULTIMATE SCANNER..
I have a couple of ham buddys out there that do paket and
they want there 2006 modified for s-meter and I would like to receive
paket till i can get the rigg and a LIC. for 2 meter...
I am fasinated with the things one can do with your CE-232.
Back to the subject Buy cutin you off this jerk needs more than a
spanking, But on the other hand If the people catch fire for your
product and they have any brains they will sooner or latter
be in touch with you and with in a winkling of an eye you'll
have the glory and word of mouth sales from the mess.

I find it very irritating when I get mails of your kind which do not move the human race forward one bit, after some thought I taught it would not only be better for myself, but also beneficial to the young kids on this newsgroup that I Do not continue to read and respond to your mails.

You find it hard to utter words, without trying to instigate one to attack you or annoy one so succintingly. I continue to believe you are one of those rare species in the human race who enjoys pain being inflicted on their person.

I find it very suprising that you still do not understad that, greed is not good. I would have to leave you with your ways, the sooner you get corrected off the net, the better for all of us.

If selling your radio is that important to you, I'll buy it off, so you can have peace of mind. It seems you are so obsessed with getting rid of this piece of equipment - is it a hot one?

Try and relax and do not give yourself unneccesary stress based on some virtual personality, there is more to this world than insulting cyber personalities.

Have a nice and productive day!
